TRACTOR

A new auto throttle feature on the TYM T265 tractor, imported and distributed across Australia by Inlon, makes operation easy

Full throttle

New models of the TYM T265 tractor will come with an auto throttle control feature, allowing operators to control the rpm with pedals only.

Inlon sales and marketing manager Gary Surman says the auto throttle control links the tractor pedals to the engine throttle – which he says means the operator can have one hand on the steering wheel and the other on the loader joystick.

“Auto throttle means you can concentrate on the task at hand while the engine RPM is managed by pressing the [hydrostatic transmission] foot pedal,” he says.

“This simplifies operation, helps increase productivity and reduces fuel consumption.”

Surman adds that the tractor’s two separate hydraulic systems means there is plenty of oil flow for implements and attachments, putting less pressure on the vehicle by enabling basic tasks to be performed while the tractor is sitting idle.

“Conversely, a tractor with under-powered hydraulics will need high engine rpm to raise, lower and operate a loader,” Surman says.

TYM T265 tractor

“Driving at high rpm when you really need fine control for manoeuvring is potentially a recipe for errors, collisions and damage for inexperienced operators. The TYM T265 engine produces its full power at only 2,600 rpm.”

“Push buttons on the dash panel make both PTO [power take-off] and cruise control easy to operate. Independent rear and mid PTO allow operation of rotary hoes, slashers and mid mount mowers,” Surman adds.

“The TYM T265 has a strong 865kg dry weight to push,

lift and pull more than sub compact tractors, while the 700kg linkage lifting capacity gives the tractor great versatility and attachment handling.”

Other features include two-range hydrostatic transmission (HST) with two independent side-by-side HST pedals, brake assist turning, wide industrial tyres, excellent entry clearance from either side and a foldable two-post rollover protection system frame.

Visibility of the front loader bucket is also enhanced with the sleek bonnet design. **fmm**

Box seat

Case IH has made new changes to its 2022 Maxxum and Puma tractors, improvements it says were designed with operators in mind

Changes made to Case IH’s Maxxum and Puma tractor ranges put operator comfort front and centre

The new Puma SWB models (150hp [112kW]to 180hp [134kW]) now feature CVT transmission options to complement the existing Powershift offering.

Upgrades to the 2022 Maxxum and Puma SWB tractors include: a low-mounted front screen wiper with an increased sweep area for better visibility; new high-performance LED safety lighting features; an improved entrance area with aluminium steps; and an integrated cool box.

Case IH Australia and New Zealand product manager for mid horsepower and compact tractors Seamus McCarthy says the upgrades help enhance the versatility of what are already its most versatile tractors.

“Obviously when the operator is more comfortable in the cab, this can only help to reduce fatigue and increase productivity in the field,” he says.

Several modifications to the tractors were aimed at boosting connectivity and providing improved performance, he added, with a new electronic joystick and improved telematics allowing for greater efficiency and precision.

“Fast and reliable in-field connectivity is critical in realising the full potential of precision agriculture, with a direct result of that being an improvement in the profitability of farming operations, and Case IH is working hard to deliver that potential across our lower horsepower ranges,” McCarthy says.

“Customer expectations are increasingly high when it comes to the sophistication of their machinery, and the latest updates on our Maxxums and Pumas are an example of listening to our customers and interpreting their needs through the new features.”

Other in-cab updates to the 2022 Maxxum and Puma SWB series tractors include a new monitor bar for USB outlets, better drive pedal sensitivity and improved acceleration behaviour, a new rearview mirror and steering wheel and an advanced loader joystick with reverser.

The new models are now available for order, with the new Pumas to arrive Down Under mid-year and the Maxxum expected in the second half of 2022. **fmm**

TRACTOR

Just right

Distribution of New Holland’s TT3.50 tractor has commenced in Australia, adding to the brand’s versatile, small utility tractor range

Trialled globally, a combination of modifications to the engine, its front end loader capacity and its more solid materials, make this model unique for the Australian customer.

New Holland’s product segment manager for lifestyle and small farms Mark Crakanthorp says the TT3.50 has filled a gap in the Australian utility market and gives the customer the most metal for their money.

“The TT3.50 picks up where our previous Workmaster left off as the no-nonsense option for the compact utility buyer,” he says.

“Powered by the familiar three-cylinder 2.9L S8000 engine, this tractor does not compromise on grunt with 49.5hp [37kW] and a torque curve designed to match – all on a 62-litre fuel tank.”

Aligned with the profile of this unique segment, the choice of the S8000 engine means there are fewer parts that need servicing, resulting in less maintenance time, minimising downtime and optimised customer productivity.

The TT3.50 carries over components common to the existing TT4, including responsive performance, fuel economy and front-end loader capacity.

Most notably, the redesign of the more compact body has not impacted the front-end loader’s bucket size or lift height from the slightly larger models.

“Remaining true to New Holland’s reliability, the TT3.50 is set to be the everyday workhorse, comparably sitting between the Boomer and TT4,” Crakanthorp says.

“The TT3.50 is a ‘Goldilocks’ answer for the lifestyle or hobby farmer, cherry picking the best elements of our compact tractor range to ensure all possible needs are not only met but exceeded.”

The New Holland TT3.50 is now available to order from local dealerships

Targeted in a segment that crosses over from the largest Class 4 compacts and a true small tractor, another key feature of the new TT3.50 is the new-look and fresh design with a focus on comfort, ease, and simplicity – consistent with the entire New Holland range.

“Aesthetically, the TT3.50 captures the distinctive New Holland ‘cat eye’ lighting and sleek bonnet line,” Crakanthorp says.

“In contrast to other New Holland utility tractors, we have done away with the chunky, square rear fender for a narrower and cleaner design.

“Not only does this design choice complement the front styling, but it is practical too. It reduces the overall width of the tractor, so it is easier to manoeuvre along narrow tree crops in specialty applications, causing less potential damage – an important consideration with these valuable crops.

“It also offers more space between the guards for operator comfort.”

New Holland Australia and New Zealand general manager Bruce Healy says the TT3.50’s arrival in Australia is an exciting revolution in the compact tractor range.

“In the design and consultation process of the TT3.50, we wanted to ensure that the end product was not only ideal for our compact utility customer, but that it would keep up in the unique Australian conditions,” he says.

The TT3.50 is now available to order from your local New Holland dealership. 

Silvan grease gun with pistol grip

Silvan rechargeable grease gun

TOOLS

Grease on the go

Silvan Selecta releases two new grease guns

Two grease guns just launched by Silvan Selecta are ideally suited for servicing agricultural, construction and automotive machinery.

Silvan Selecta’s new grease gun with its pistol grip has been designed to prevent fingers from pinching and is suited to servicing a wide range of machinery that requires regular greasing.

With its flexible delivery tube it is ideal for use in confined spaces where access to the grease nipple is restricted..

A 1.2mm-thick robust barrel suits 450g grease cartridges. The grease gun also features a 300mm high pressure extension tube and four jaw coupler with ball check.

Other stand-outs include a facility to bulk load, a heavy duty follower spring, CNC machined grease gun head and rolled threads for fast reloading. Its maximum pressure rating is 5,000psi.

Silvan Selecta’s second product in the line-up is a high quality 18.5V lithium-ion battery operated rechargeable grease gun.

The gun has been designed for use by farmers, construction operators and workshops for everyday greasing jobs and to efficiently maintain many machine attachments.

The unit takes 450g grease cartridges. Built tough, the grease gun has a robust 1.2mm-thick barrel, thick machined head and large rolled threads for fast reloading. Its maximum pressure is 6,000psi.

Other features include a robust aluminium die cast head fitted with automatic air bleeder and bulk loader valve.

It comes with a blow moulded carry case for safe storage, 240V long life lithium-ion battery charger and shoulder strap.

Another feature is the 750mm high pressure hose with spring guard on both ends and four jaw grease coupler. 

DEALERSHIPS

Flowers gone

Wickham Flower dealerships sold to Canada’s Brandt Group

South Australian John Deere dealer group Wickham Flower & Co has been sold to a Canadian distribution giant, with the deal set to conclude on June 30 this year.

Based in Saskatchewan, Brandt Group also acquired fellow Canadian equipment supplier Cervus last year for roughly US\$302 million (A\$420.5 million) – Cervus owned many dealerships worldwide including seven dealerships in Victoria.

Wickham Flower was founded by a man of the same name in 1931, created as a general agency for wool, grain, fertiliser, oil, insurance, land sales and farm machinery.

Today the company has grown to 90+ trained staff and serves over 5,000 customers from its sites in Bordertown, Keith, Mt Gambier and Naracoorte.

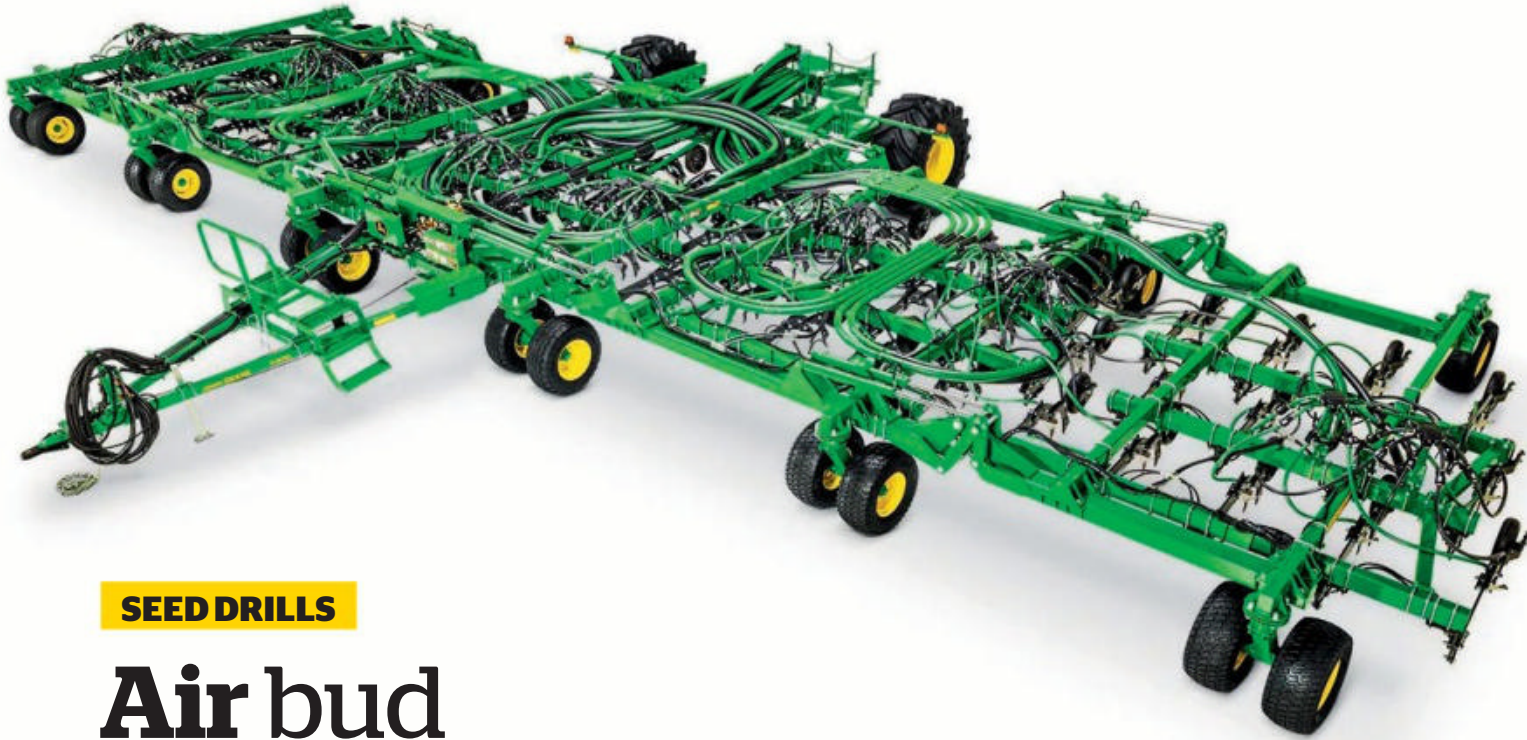

Aside from Deere, Wickham Flower sells and services JCB, Kuhn and other agricultural equipment, with Brandt saying the company has been the #1 John Deere franchise for customer satisfaction in Australia multiple times.

“Like Brandt, Wickham Flower has a proud history dating back 90 years and we are excited to have this strong foundation to build on,” the company says.

Wickham Flower has been sold to Brandt

“Brandt has a lot to offer customers in this region and we’re ready to roll up our sleeves and earn their loyalty through a combination of premium products and services and a consistent, high-quality customer support experience.” 

SEED DRILLS

Air bud

Lighter, wider seed drills set for delivery in early 2024

Now available for order, John Deere's new line-up of P600 precision air-hoe drills are lighter and wider than their predecessors.

Ranging from 12.2-27.4 metres in working widths, the range includes the P640, P650, P660, P670, P680, and P690 models - with the last two digits of each number being the tool width of the unit in feet.

Each unit has 25.4-30.5cm spacing and new dual knife openers to consistently place fertiliser 3.8cm horizontally and 1.9cm vertically away from the seed for even emergence and equal access to nutrients.

The new models are up to 15.5 per cent wider and weigh up to 24 per cent less than the P500 range,

helping to decrease compaction, labour time and fuel consumption.

The seeders come equipped with Deere's JDLink connection to its John Deere Operations Center precision technology suite, helping users monitor what is happening during seeding and collecting data to inform future decision-making.

The company's precision agriculture segment manager Ben Kelly says the introduction of the P600 range will round out John Deere's integrated seeding offer - providing a choice to small grain farming operations across the country.

"Our focus is on providing flexible and adaptable seeding solutions for small grain farmers, which

is why we offer tractors in wheel, two-track and four-track configurations, high-capacity air carts in tow-behind and tow-between options and, with the launch of the new P600 line-up, seeding bars in a range of working widths for both disc and tine," he says.

"The increased working widths will not only mean more hectares can be covered per day, but the inclusion of 12, 18 and 24 metre widths will also suit existing controlled traffic farming systems for marked reductions in compaction.

"Additionally, the P600 provides ideal seed to soil contact, consistent seed and fertiliser depth, excellent residue flow and stubble management," he adds.

The P600 seed drills incorporate Deere's existing air seeding technologies with its RelativeFlow blockage sensing system, which allows farmers to see the flow rate of seed and fertiliser from inside the tractor cab.

The new P600 air-hoe drill will be available for order in 2023 for delivery in early 2024.

In the 2023 seeding season, John Deere will have the P600 on-farm in Western Australia to give producers the opportunity to see and experience the product prior to placing an order. **fm**

SPRAYER

Top selection

See & Spray Select technology awarded the Davidson Prize at a US ag innovation showcase

Developed together with the University of Southern Queensland, the John Deere See & Spray Select system has been named among the top three innovations of 2022 at a major US awards showcase. Awarded by the American Society of Agricultural and Biological Engineers (ASABE) in collaboration with the US Association of Equipment Manufacturers, the Davidson Prize is awarded to the top three of 50 agricultural innovations in the past year. John Deere's See & Spray Select system, available on its 400 and 600 Series sprayers, was a winner. The vision-based precision spray technology detects and helps eradicate weeds in fallow ground, using integrated cameras to detect green plants that are then automatically sprayed. The technology was developed by USQ four years

ago and was subsequently tested by Deere across farms in Australia, Canada and the United States. Deere released the newest iteration of the technology - See & Spray Ultimate - as a factory-installed system on John Deere 410R, 412R and 612R sprayers for the 2023 model year. This innovation, developed by Deere subsidiary Blue River Technology, identifies green weeds in green crops, and is being rolled out for cotton, corn and soybean farmers. John Deere precision ag segment manager Ben Kelly says the technology will become a keystone among the precision agriculture tools available to farmers, to optimise performance and sustainability. "While the initial results being seen in the US are extremely impressive and we understand that in-crop weed control is a priority for Australian farmers,

Cameras detect weeds for precision spraying

John Deere See & Spray Select boom

it is going to take time to iterate and scale this technology into local regions," he said when the product was launched in March. "For Australian farmers, the exciting news is that the first of the See & Spray Select equipped sprayers are arriving right now. These were launched in limited quantities last year but will be widely available to order in mid-2022." The other innovations awarded were Agco for its Fendt Rogator 900 Series applicator and the VeriGrain automated sampling and data management system. AEM senior vice president for agriculture Curt Blades says the three products deliver solutions and represent the innovative legacy of agricultural engineering. "We're excited about the advancement of ag engineering and the positive impacts it continues to have on farmers' ability to work more efficiently," he says. **fm**

◀ SGMC dealer principal Craig Brimblecombe (centre) with Case IH representatives, from left, Shayne Brooking, Steve Emmert, Patrick McVeigh and Chris Maddocks

Real deal

Kenway & Clark, St George Machinery Centre, Three Rivers Machinery, Ag North and Intersales have been named as dealers of the year by Case IH in Australia

Kenway & Clark and St George Machinery Centre (SGMC) have claimed the top honours in Case IH's 2021 dealer of the year awards - the first time both groups have taken out these awards.

With six branches in north west New South Wales and Queensland, Kenway & Clark was named Case IH Dealer of the Year (three branches or more), and dealer of the year for service.

Kenway & Clark dealer principal Peter Burey says the dealership was surprised and delighted with the wins.

"It's something we're very proud of, and is certainly a great reward for the hard work of our team, particularly in the last 18 months when there's been some big changes in the business," he says.

"It is a team achievement and we want to make

particular mention of our divisional managers who lead so well and put in so much effort."

In another first, SGMC in St George, Queensland, took out the award for Case IH dealer of the year (one or two branches), and dealer of the year - wholegoods.

SGMC dealer principal Craig Brimblecombe says the wins came as a "total shock" and he credited his team with the dealership's outstanding results.

"There's been a lot going on in the past 18 months with the new STAG venture, that's meant I've had to be elsewhere a lot of the time, but the SGMC team has really put in when it's counted," he says.

"They've worked so well as a team, and these awards are a credit to their commitment and hard work."

Case IH general manager for Australia/New Zealand Pete McCann says the winners showed a level of excellence and commitment to their customers.

"Kenway & Clark and SGMC are worthy winners of these titles this year, and their achievements can't be overstated," he says.

"They have both assembled outstanding teams who are committed to consistently and rigorously maintaining the standards required to secure our two top dealer of the year awards.

"Both dealerships have taken on significant growth opportunities in the past few years and are to be commended on the way these changes have been incorporated and for the subsequent benefits to their customers."

Other winners for 2021 include Three Rivers Machinery (Warren, NSW) which took out dealer of the year - parts; Ag North in Ayr, Queensland, is dealer of the year - CNH Industrial Capital (one or two branches) and Intersales, with four branches in southern NSW, takes the title of dealer of the year - CNH Industrial Capital (three branches or more).

The dealer of the year results are based on a range of criteria, including finance and business management, performance in sales and marketing, and parts and servicing, Advanced Farming Systems Certification and total market share. **fm**

DATA

Get involved

WA pilot for data storage and sharing looking for participants

A new ‘gold standard’ data sharing platform is about to be piloted in Western Australia, enabling producers to transfer information through secure channels.

Extrata was developed by Western Australia’s Department of Primary Industries and Regional Development (DPIRD) in response to producers’ concerns about the security of storing and sharing sensitive commercial and research data.

The department is seeking interested early adopters to participate in a pilot of Extrata in coming months to help refine the product and its useability.

Farmers increasingly rely on digital data collected from weather stations, soil moisture probes, harvesters, drones, sensors and other automated systems to make informed on-farm management decisions to improve productivity and profitability.

This information is typically stored on individual cloud-based systems, which can be shared with data service providers to analyse and prepare reports and decision-making aids.

DPIRD’s new Extrata service securely transports this data, encrypted end-to-end, providing farmers with confidence that their sensitive agricultural data is supplied to the intended recipient only and remains confidential.

Extrata employs the highest data security protocols, it says, and was recently accredited for compliance with the Food Agility Cooperative Research Centre’s (CRC) Best Practice Data Policy.

DPIRD eConnect+ project manager Darren Gibbon likened the new Extrata platform to a trusted digital data carrier service.

“Digital information and data collection has become a key component of modern primary production, but it is nothing unless you make that data work,” Gibbon says.

“To do that, information must be shared and analysed so farmers can make evidence-based, data-driven decisions that can improve agribusiness performance.

“Extrata acts as a trusted courier to transfer that information between the producer, the data

DPIRD eConnect+ project manager Darren Gibbon shows off the department’s new Extrata data sharing platform

collector and the data service provider, with confidence that the bundle of information remains secure.

“Unlike other data sharing services, Extrata does not retain the data at any point, merely couriering the information to a destination with which the producer has a third-party sharing agreement, which can be suspended at any time.”

DPIRD is using the Extrata platform to help devise a new liming strategy, as part of a Food Agility CRC project, in collaboration with the Grower Group Alliance, AxisTech and Curtin University.

“Extrata will help to simplify the process of getting data from the farmer to the model and back,” Gibbon says.

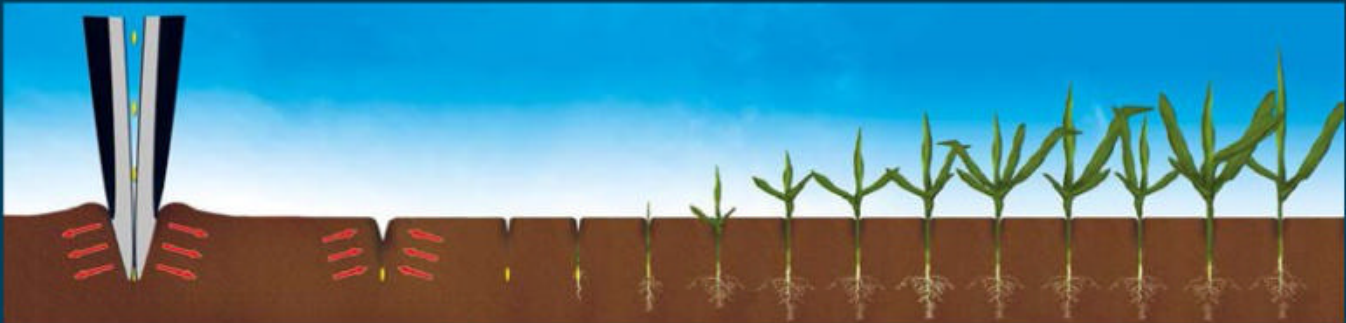

The free Extrata pilot is open to all producers and service providers involved horticulture, live-stock and agriculture across Australia. **fm**

For more information and to register to participate in the Extrata pilot visit www.agric.wa.gov.au/econnect or email econnectedgrainbelt@dpiird.wa.gov.au.

Lush life

The Agri Air Twin pasture overseeder, produced by Dutch manufacturer Vredo, is set to hit Australian shores soon

High quality and reliable equipment and a commitment to the long-term is what business manager Jason Hatton believes sets Sustainable Machinery apart.

Based in Theresa Park on Sydney's southwestern fringe, the company is the Australian importer of Dutch-made Vredo overseeders.

While the Sustainable Machinery name has only existed since 2016, the locally-owned, independent company has more than half a century of history in Australia.

"It started off in the sports turf industry and our original company was started in 1971, so we go back a long way," Hatton says.

"We're two generations deep into the industry and, because of our depth in turf farming, we saw an opportunity to diversify further into agriculture.

"As the business took off, we realised that there was quite a demand for quality machinery, which inevitably is how Sustainable Machinery started as a standalone entity with the focus on importing and

distribution of quality machinery to our customers."

As a family-owned company with an established history, the partnership with Vredo seemed like a natural fit.

Founded in 1947, Vredo is also family-owned and the manufacturer approached Hatton about becoming its Australian importer to help grow its presence Down Under.

"I recognised the quality of the machine and the unique difference of the machine against other options available to contractors and farmers in Australia, and decided it would be of value to people to pursue it," Hatton says.

"We started working with their turf machinery some years ago and I could see more value for the pasture machinery in Australia than anything else because of what we do.

"Farmers find it hard these days to get quality machinery and machinery that delivers what manufacturers say it's going to deliver. We deliver quality and productivity."

^ The double disc system is a standout feature

Vredo's Agri Air has been the main overseeder imported by Sustainable Machinery, however the range is set to grow with the first Agri Air Twin units currently on their way to Australia.

Hatton says the double disc system on Vredo's overseeders is their standout unique feature, helping to increase both efficiency and yield.

"Imagine two dinner plates coming together on the bottom," he says.

"It's split apart 20-30 centimetres at the back of the disc to enable the ground to open up. You're cutting through the sward into the ground by maybe 20mm or whatever your desired depth is and placing a quantity of seed exactly where it needs to go to get the best germination rate.

"The machine is unique in both its disc width and the fact this company was the first on the planet to come up with a double disc system.

"There have been a few companies copying us,

but the width of the disc spacing is 75mm, which is incredibly narrow and increases yield dramatically by both saving germination rate and close spacing of seed without over-placement.”

Hatton also says it is important for customers to realise the Vredo Agri products are pasture overseeders, rather than arable overseeders for “bare dirt”.

“We focus on people that have got some sort of vegetative cover across the ground,” he says.

“You see these very big overseeders that are designed to go on bare dirt. They’re 100 feet wide and the ploughs and all this sort of thing - we’re a different machine to that. We’re unique in the fact that we’re looking to overseed pasture.”

Vredo’s Agri Air Twin is designed for farmers who require extra capacity over the regular Agri Air, as it offers a 425L seed hopper.

Available in two working widths of 4.4m and 5.8m, it offers further customisation through its ability to have seed distribution continually adjusted

between three and 210 kilograms per hectare.

A working speed of 13km/h allows farmers to cover plenty of ground during a day in the field, while spring-loaded discs and the ability for

I recognised the quality of the machine and the unique difference of the machine against other options available to contractors and farmers in Australia

both sections of the machine to pivot means it can comfortably handle undulating land.

Hatton believes characteristics of the Vredo overseeders are similar to his overall approach to business - prioritising reliability, honesty and long-term commitment over the pursuit of a “quick buck”.

“We’re bringing a machine to market that has superior quality and performance,” he says.

The Vredo Agri Air Twin has a working speed of 13 km/h

“We don’t sell ourselves on being the cheapest, but we do sell ourselves on being the best.

“I’ve prided myself in my business of being honest with people and never lead people down a garden path.

“I tell my customers if they want to buy something, that’s going to last five minutes, don’t come to me.

“If they want to buy something they’re going to have for many years to come - that’s their investment.

“I’ll always treat them honestly, deliver them what’s right and, if it’s not suited for them, I will tell them and I will send them in a direction that is, because that’s the way to be here for the long-term.

“I’m not here for a quick buck.”

SPRAYERS

Something special

Case IH has brought aluminium booms into its fold with a new acquisition in the USA

CNH Industrial has acquired US-based aluminium spray boom manufacturer Specialty Enterprises, with plans to roll its technology out across its product range.

Specialty is the largest manufacturer of aluminium spray booms for agricultural applications in North America and has been supplying to Case IH since 2020.

Case IH says Specialty is known for its advanced engineering and high-quality workmanship as a welding operation.

The company's sprayer boom design

incorporates multiple patents to virtually eliminate the fatigue cracking associated with other aluminium boom designs.

As aluminium spray booms are up to 50 per cent lighter than their steel counterparts, they result in less field compaction, less rutting and better weight distribution.

Case IH says taking direct ownership of the production facilities is the latest step in the roadmap for its sprayer product platform.

"As the company works to enhance its application-product offering, the inclusion of

longer, lighter booms enables accelerated development and deployment of new technologies," it says.

"These solutions will be implemented across the Case IH product portfolio."

Case IH global president Scott Harris says the company is thrilled to be working more closely with Specialty.

"This acquisition strengthens our in-house capabilities and allows us to retain key strategic personnel to ensure continuity in this vertical integration," he says. **fm**

TriTech RivX boom

Prairie Pro Series 2 - featuring TriTech RivX boom with increased strength & boom stability.

- ▶ Steel / aluminium composite symmetrical construction.
- ▶ Infinite nozzle spacings in perfect alignment.
- ▶ Enclosed boom end tip for greater nozzle protection.
- ▶ Hydraulic boom wing bi-fold with 3D breakaways.
- ▶ 1" boom plumbing.
- ▶ Boom protectors incorporated into breakaways.
- ▶ Transport width under 3500mm.
- ▶ 36 to 42m TriTech RivX boom.
- ▶ Boom height control – Radar sensor technology (optional).

Pick of the crop

A flexible, tailored and longer-term finance solution from NAB has given contractor BMC Partnership the confidence to invest in equipment

Every business relies on having the right equipment at the right time to operate effectively. In agricultural businesses, the right equipment is often expensive and long-term in nature. Financing the purchase of such assets can also be complicated.

NAB Equipment Finance Specialist Charlie Coote says agribusinesses today face two major challenges in financing equipment purchases: the rising cost of new technology; and supply constraints, which mean equipment must be ordered much further in advance.

“Our clients need to be more prepared and strategic with planning for major capital purchases,” Charlie says.

Experience in the field

The need for forward planning is something BMC Partnership’s Ross Munro knows well.

BMC Partnership is a large contract cotton stripping, picking, manufacturing and transportation business based in Moree in northern NSW.

Ross heads the business and his son, Scott, runs the day-to-day operations. The business purchased three new cotton-picking machines for its fleet for the 2022 season, at a price of \$1.4 million each. Ross had to place his order around 10 months before he needed the pickers.

“You have to say, ‘Who’s going to plant cotton? How much cotton is going to be planted?’ to make the numbers work. It’s a big call that far out,” Ross says.

The stakes are high. Some contractors who ordered late are still waiting for equipment to arrive and they risk missing the picking season. This means when the equipment does arrive, they will have to pay for it without being able to use it to generate income.

Our clients need to be more prepared and strategic with planning for major capital purchases

Fast, flexible finance

For Ross, access to flexible finance was the key to the success of his purchase.

BMC Partnerships has been a customer of NAB for around 20 years and Ross worked with Charlie and banker Liberty Walker on financing the purchase of the three cotton pickers. Charlie and Liberty structured the debt offer to suit the asset and its expected life span and, importantly, to ensure the debt suited the business cash flow.

Ross wanted to compare NAB’s offer to the equipment supplier’s trade finance but with the machines ordered and on their way, he was still waiting for a response.

“There was a big demand for those machines, and I knew that if I faltered there would be 30 customers who would take that machine off me,” Ross says.

“I was watching the ship on the tracker. I could see it going through the Suez Canal. It was coming past Perth, past Fremantle. I could see the deadline coming together ... The next second it’s going to be here.”

As the machines neared port, the supplier’s finance offer finally came through, allowing Ross to do the comparison.

The interest rate offered by the supplier was lower than the rate offered by NAB but the terms were less flexible. NAB was able to timely provide a solution that was flexible and meet cashflow and business needs.

Ross accepted NAB’s offer based on flexibility.

“NAB was much more negotiable with the planning,” he says.

“I don’t mind paying more interest. I’m after a bank that can move when things move and change when things change.”

Support when its needed

This year, Ross is glad he went for flexibility – with

B

widespread flooding in the Moree area halting operations in the middle of the picking season.

“I’ve got machines stuck in flood water. Nothing is picking cotton today. In my budget, I’m assuming I’m picking but I’m not. I’ve got seven machines sitting doing nothing but I’ve already thought that could happen so I’ve moved my repayment schedule into a format that will meet that need,” he says.

Liberty says the crux of the deal was NAB being able to offer a tailored solution to the customer.

“We were able to do that for Ross with those three machines, to do it quick and do it right first time,” she says.

“It’s being quick to market and then leveraging off that deep relationship with Ross over the past 20 or more years in conjunction with meeting his requirements and tailoring it to meet his business and his cash flow.”

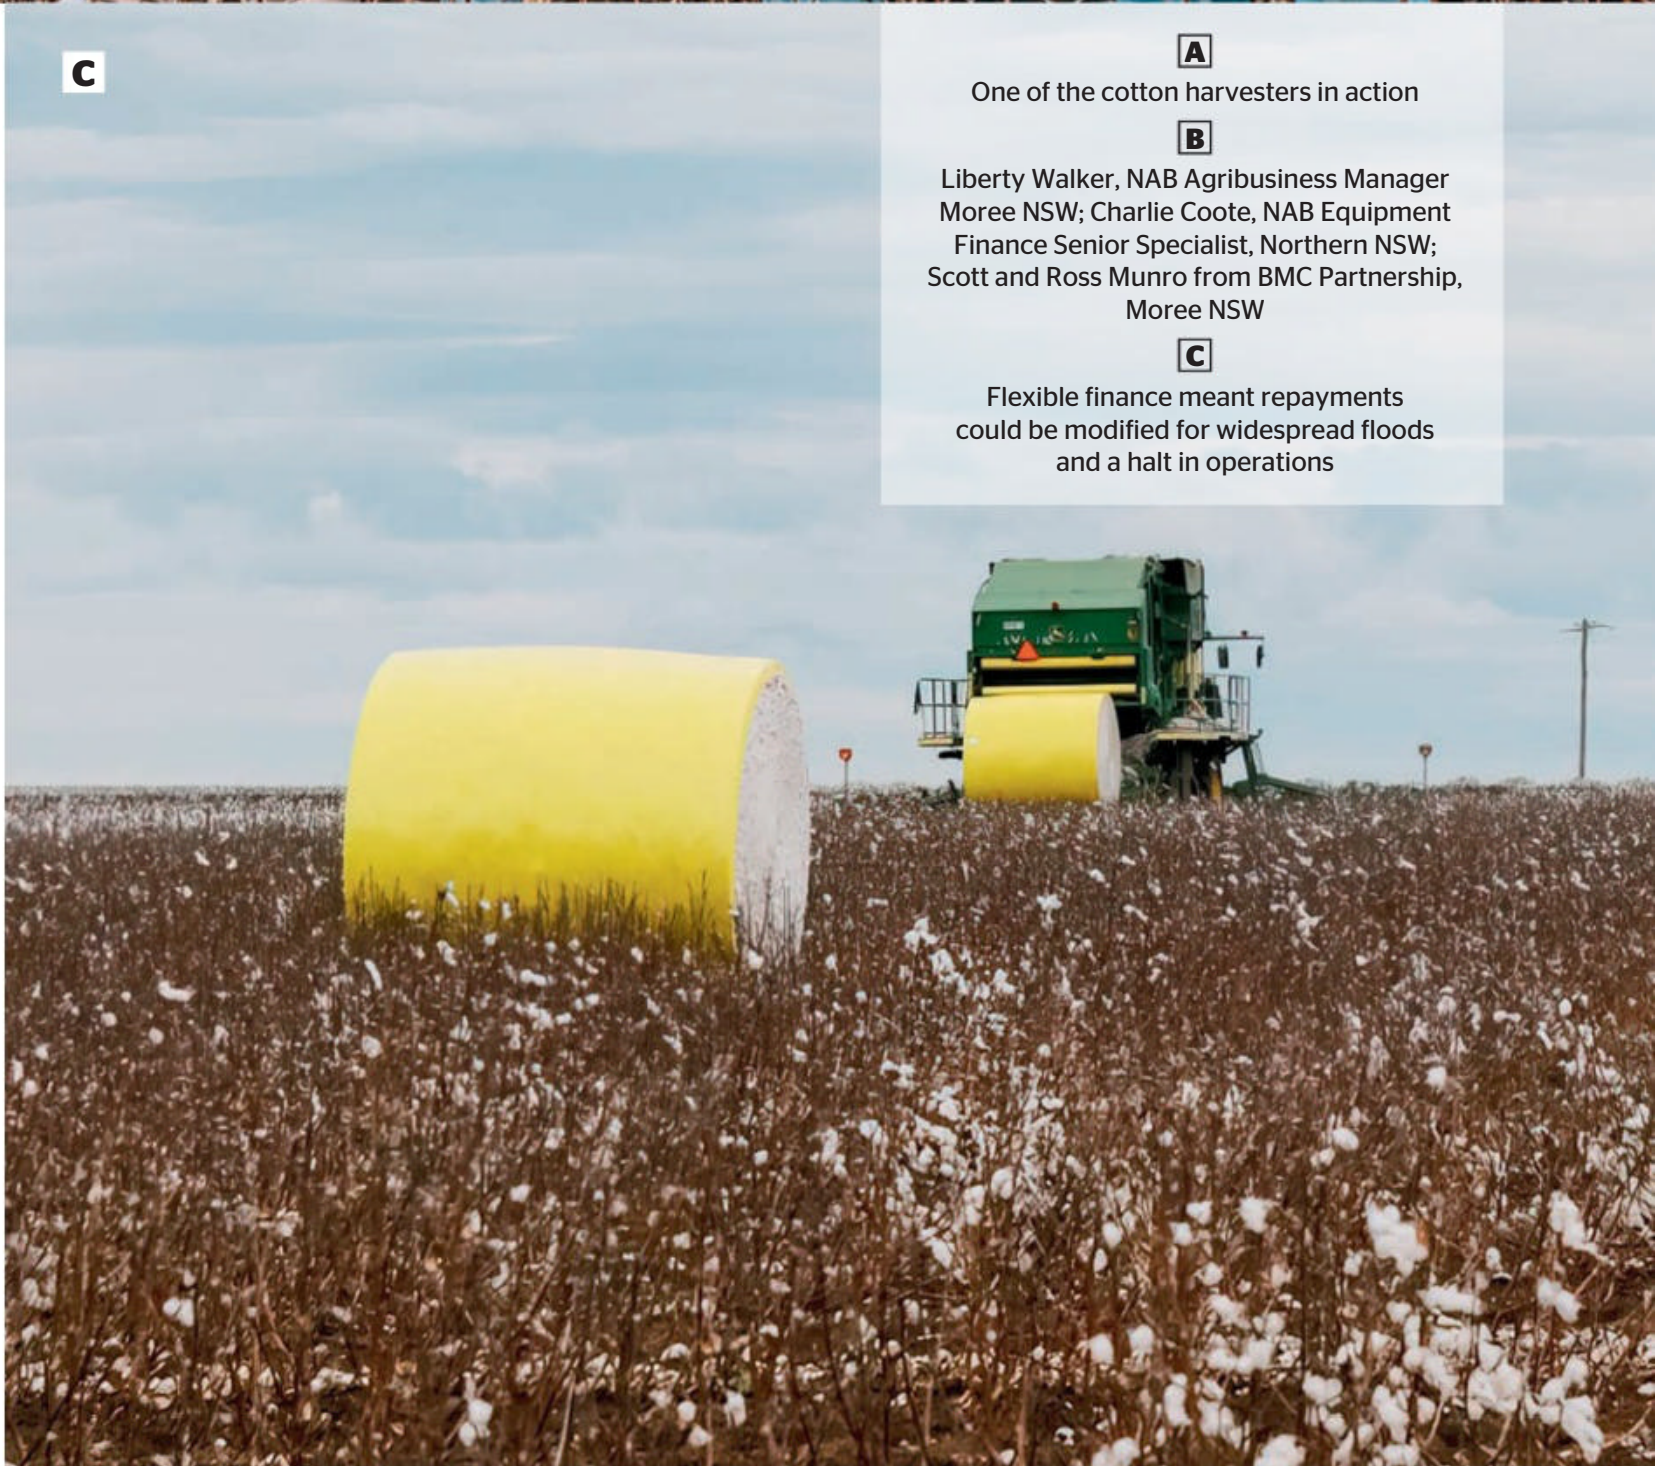

It’s all part of maintaining customer relationships. NAB had worked with Ross’ business on complex transactions in the past and had helped him with his business succession planning.

NAB has a strong history of supporting its customers in both good and bad times. During past droughts and floods, NAB bankers have been there on the ground, speaking to clients, restructuring debt and delaying repayments on equipment finance when needed – supporting agribusinesses to carry on with one less thing to worry about, as Charlie puts it.

Aside from this year’s rain and a few common teething problems, Ross is happy with his cotton pickers.

“There was a lot of work we had to do with them to get them up to full steam, but they’re humming along now,” he says. *ffm*

◀ Prices are rising as the demand for agricultural machinery remains strong worldwide

MARKET

Steady going

Supply issues continue to hamper tractor sales and prices rise as a result, according to the Tractor & Machinery Association

Sales of agricultural tractors were down in April by three per cent on the same month last year and are now 11 per cent behind for the 2022 year to date.

This is still a strong level of sales for the industry, which continues to be severely hampered by supply issues.

Exacerbating the challenges associated with getting machines, most members are now reporting solid price increases being passed on by their factories after a few years of largely absorbing these movements.

Of note is the supply of steel with Ukraine – reportedly responsible for a large share of the world’s production – being severely impacted, leading to price increases across the board.

Demand for agricultural machines is presently very strong worldwide and here in Australia. With the Temporary Full Expensing Program set to run until June 2023 along with continued demand for Australia’s farming produce, we expect activity to remain strong.

Indeed, a recent survey of dealers has found that the majority expect turnover to remain unchanged for the outlook period.

Looking at sales across the nation, results varied somewhat in April.

Beginning in NSW, sales were again down 21 per cent for the month and are now 13 per cent behind last year. Queensland was up 12 per cent as deliveries delayed in March due to the inclement weather took place, and is now one per cent behind. Victoria was 19 per cent up on last April, due mainly to supply of small horsepower units, and is now 4.2 per cent down on the year to date (YTD).

Sales in Western Australia recorded another drop, this time five per cent for the month to be 27 per cent off YTD, South Australia also dropped eight per cent. Tasmania was again down, this time by 15 per cent,

Gary Northover is executive director of the Tractor & Machinery Association of Australia (TMA). He can be contacted on (03) 9813 8011 or at gary@tma.asn.au

whilst sales into the Northern Territory were down 21 per cent.

Looking at the performance reporting categories, the small under-40hp (30kW) category was strongly up 20 per cent to be two per cent off YTD. The 40 to 100hp (30-75kW) range was up three per cent in the month to remain two per cent ahead YTD and the 100 to 200hp (75-150kW) category was down 18 per cent.

The large 200hp (150kW) plus range was again down, this time by 15 per cent compared to the same month last year, and is now 33 per cent off YTD. The big end of the range is experiencing the worst of the supply chain delays as members report lengthy lead times out of the factories due to everything from steel supply to the ongoing shortage of computer chips.

Combine harvester sales are yet to commence for the year; however, dealers are reporting healthy pre-order interest for machines, which should lead to another strong year’s sales.

Baler sales were down in April and are now down 20 per cent compared with the last year and sales of out-front mowers finished down a whopping 44 per cent. **fm**

Planning is well underway for the 2022 TMA Conference, which has been scheduled for Wednesday July 20, to be held at the Hyatt Essendon Fields in Melbourne. Tickets are now on sale and can be found on the TMA website: www.tma.asn.au

EVENT

Show goes on

The Norco Primex Field Days in New South Wales will be held later this year after they were postponed due to the impact of floods

Norco Primex Field Days has announced revised dates of November 10-12 for this year's edition of the agricultural expo.

Originally scheduled for May 19-21, organisers decided in early May to postpone the event due to floods and ongoing adverse weather conditions affecting Casino and surrounding parts of New South Wales.

Event director Bruce Wright says the new dates were selected after extensive consultation across a range of exhibitor and stakeholder sectors, while

also taking other field days and event calendars into consideration.

"We have taken the time to seek advice about suitable dates with a broad section of our stakeholders, and also sought feedback to maximise the opportunities and benefits the event and its exhibitors can provide," he says.

"We also hope to minimise any impacts to other functions and events scheduled throughout the region at this time.

"The indication from stakeholders suggests

◀ Norco Primex will take place on November 10-12

there are no other events that would be directly affected by this decision, and that the region would, in fact, benefit from the additional visitors travelling here for Primex and the Northern Rivers' extensive destination experiences."

Wright says Primex is important to the region and more than 400 businesses benefit from the event being held.

His goal is to achieve full capacity and end 2022 with an event that will showcase and support the local community and its primary industries.

"Almost \$5 million will be injected immediately into the region's economy, and we expect more than \$47 million in sales generated by the event over the three days," he says.

"With many businesses, farmers, regional communities, charities, and support groups reliant on the delivery of a successful Primex, we are looking forward to improved weather conditions and enhanced development of the event programs and exhibitor participation."

Norco Primex 2022 will be held at the Richmond Valley Events Centre at Casino between November 10-12. **ffm**

Events calendar

Here are upcoming field day and agricultural events for 2022. Information was current as of going to press

Alice Springs Show - Alice Springs

Started in 1960, the Alice Springs Show aims to promote, encourage and advocate for the development of agricultural, pastoral, horticultural, viticultural, commercial, industrial, cultural, handicraft, artistic and tourism pursuits in Central Australia.
When: July 1-2, 2022
More info: www.alice-springs.com.au

Mudgee Small Farm Field Days - Mudgee

The Mudgee Small Farm Field Days has been running for over 40 years and attracts approximately 20,000 people per year. With the mission to inform, educate and connect rural people with information and solution providers there are free demonstrations and talks along with commercial stalls, live music and activities to suit the whole family.
When: July 8-9, 2022
More info: <https://mudgeefielddays.com.au>

Katherine Show And Rodeo - Katherine

The biggest community event in the region, the Katherine Show is a must for all. There are showrides, a rodeo and equestrian events as well as poultry entries, a chook auction, cattle show and pets.
When: July 15-16, 2022
More info: katherineshow.org.au

Australian Sheep & Wool Show - Bendigo

The Australian Sheep and Wool Show is your one stop shop for all things sheep. More than 2,700 sheep and 30,000 people assemble in Bendigo for three days in July for largest show of its type in the world.
When: July 15-17, 2022
More info: sheepshow.com

Royal Darwin Show - Darwin

With the aim of promoting, encouraging and assisting the development of primary industry, commercial, cultural activities, mining and industrial resources of the Northern Territory, the Royal Darwin Show has livestock, a horticultural pavilion, food, entertainment and a carnival.
When: July 21-23, 2022
More info: darwinshow.com.au

Sheep Connect - Hamilton

Sheepvention Rural Expo has a sheep show and ram sales, an innovations hub, ag competitions, trade exhibits and other entertainment and produce.
When: July 31-August 2, 2022
More info: www.hamiltonshowgrounds.com.au

Mallee Machinery Field Days - Speed

Mallee Machinery Field Days brings together more than 8,500 visitors, and 350 exhibitors, with an estimated \$100,000,000 worth of equipment and machinery on site.
When: August 3-4, 2022
More info: mmfd.com.au

Nyngan Ag Expo - Nyngan

The Nyngan Ag Expo will see over 300 exhibitors display their products and services ranging from farm machinery, livestock and motor vehicles to lifestyle, fashion, art, craft, emergency services, schools and children's amusements. See demonstrations on farming conservation, farm safety and much more then afterwards, relax and enjoy the hospitality, in the Aussie Country Catering Food & Wine Extravaganza marquee.
When: August 6, 2022
More info: www.facebook.com/nynganagexpo

Agquip Field Days - Gunnedah

Arguably one of the biggest field days on the Australian calendar, AgQuip has been supporting the agriculture world from its permanent, purpose-built site just outside of Gunnedah, NSW since 1973. Attracting more than 100,000 visitors each year and showcasing over 3,000 products, AgQuip has proven to be a much-anticipated event for both exhibitors and attendees alike.
When: August 16-18, 2022
More info: acmruralevents.com.au/agquip/home

EXPANSION

On course

Burgeoning demand for its bale forks has led Kerfab to build a second factory as it looks to double its manufacturing capacity during a period of COVID-19 recovery

Kerfab's evolution can be summed up in one simple sentence.

"Year in, year out, we've been consistently building more and more bale forks just because we will acquire new customers, and they're happy with them," the manufacturer's marketing coordinator Ryan Hoban says.

Continual growth in a company's core product is a clear measure of success, and that has been the case for the Australian-made attachments manufacturer.

Further proof of Kerfab's growth is shown by the building of a second factory right next to its existing one in the northern Victorian town of Kerang.

The new factory is expected to open around July and will double Kerfab's manufacturing capacity.

It is a big investment in the future, but Hoban says it is necessary to continue the strength of its local manufacturing and ensure lead times can be reduced following the COVID-19 pandemic.

"It's going to take in quite a few more staff and there's going to be robots and automation in there as well," he says.

"It will help us to pump out the numbers of bale forks that we need.

"Lead times have gone out, pretty much like everyone else in the industry, just because of everything that's happened with COVID-19 and the huge increase in demand. This will allow us to reduce those lead times massively, be able to have items in stock and dispatch them really quickly."

While not immune from the issues facing all manufacturers due to the pandemic, the fact Kerfab manufactures all its bale forks and agricultural attachments locally places the company at a considerable advantage.

"There are a few benefits to that," Hoban says.

"One is customisation, so we can actually make an item exactly how someone wants it, and the second obviously is we're not waiting months for containers that are sitting in a dock somewhere,

because no one can get containers at the moment, and freight costs are through the roof.

"We're less affected by everything with international shipping so we can still meet customers' needs, just simply because it's made here in Australia."

Kerfab has historically offered seven-day lead times on its 'Attach + Go' range, an ongoing promotion relevant to a number of its core products, including some bale forks, telehandler buckets and pallet forks.

Hoban says this was "extremely popular" before COVID-19 scuppered the ability to offer this quick turnaround.

"Once we get this new factory up and running, our aim is to get back to seven day lead times on those core products," he says.

Lead times are a significant factor in any agricultural purchase and Hoban says Kerfab can provide accurate information about when customers can receive their product.

^
The new factory in Victoria will double Kerfab's manufacturing capacity

By manufacturing its products locally, Kerfab can supply its machinery attachments quickly

“We’ve really focused in on our production side of things, manufacturing and having all the systems and processes in place so we can give accurate lead times and we can meet those these times when we do give them,” he says.

“It’s not just a guess; we’ve got all our systems, processes, and software in the company.

“It’s also not someone saying something like ‘I reckon we can knock that out in two weeks’, it’s all planned out meticulously by the operations and production departments.”

Bale forks are one of Kerfab’s biggest sellers, with Hoban estimating “hundreds” are made and sold every year.

It has been a steady and consistent growth, aided by growing demand from major dealers in addition to farmers.

“We sell directly to dealers Australia wide as well as to individuals, but we always recommend end users to go through their local dealer,” Hoban says.

“We work with all machinery manufacturers and our ability to build attachments to suit any machine make, model, or hitch type puts us in a pretty good position.”

Kerfab is a growing company, with staff numbers having roughly doubled from approximately 30 to 60 in the past four years.

Another example of the company’s growth, plus its ability to cater quickly to customer needs, is in its Western Australian presence.

The company’s second base is located in the south-eastern Perth suburb of Canning Vale, meaning Kerfab can get its products and parts to where WA customers need them, while also ensuring issues can be dealt with quickly.

“We’ve moved into a bigger warehouse and office in WA where we’re stocking more agricultural and construction products,” Hoban says.

“By stocking a lot of ag products in Perth itself, we can service the WA market in their state

Hundreds of bale forks will be made in the new facility

instead of trying to do everything from Victoria.

“Everything is still made in Kerang and then shipped across there and kept in stock, and custom items are shipped there for distribution. Having a local contact if there is an issue also helps.

“Obviously, WA is a pretty big state, but just having somebody in Perth alone makes a pretty big difference in that, if a customer needs an answer to a problem or they have a problem, they can get in touch with somebody who is maybe only a few hundred kilometres away instead of a few thousand.” *ffm*

Kerfab’s factory and head office is located at 11 Tate Drive, Kerang, Victoria, while its WA office and warehouse is at 60 Tulloch Way, Canning Vale. The company can be contacted on 1800 818 079 or through www.kerfab.com.au

TRACTOR

New fields

Having built a reputation in earthmovers and wheel loaders, and with service bases across the Australian mainland, United Heavy Industries is heading to the farm with the debut of its UHI454 45hp tractor

Machinery importer United Heavy Industries is expanding its product range, with the first tractors it has ever offered about to arrive in Australia.

The move marks a significant step in UHI's expansion, having grown to cover all mainland states just four years after first establishing an Australian presence.

UHI's core business has been in affordable earthmoving equipment, with machines such as wheel loaders and mini excavators being the most popular among its farming client base.

The company's business development manager James Wang says the first tractors are expected to arrive in the coming weeks, having been introduced following feedback from customers who have bought other machines from UHI.

"Since we have been selling more wheel loaders to farmers, customers are asking whether we could get tractors," he says.

"Tractors will help with jobs that need something smaller and more compact than the wheel loaders.

"On the farm, normally someone has a small machine and big machine for two different types of work, so that's why customers wanted us to see whether we could get reliable tractors, like the wheel loaders."

The first tractor being introduced is the UHI454 - a compact, 45hp (33.5kW) model with a 2,600kg load capacity, eight forward and reverse gears and an overall size of 4.7m in length, 1.75m in width and 2.51m in height.

Wang says the philosophy of an economical,

compact machine appeals to the company's customer base in the same way as its other equipment does, such as the mini excavators it offers.

"Many people are retired or have a hobby farm," he says.

"First of all, they can't hire anyone to do the job and then, secondly, it is very costly as well - if they want someone to dig a trench and someone quotes prices more than \$10,000.

"If they get our machine, which is a similar price, they can do the job and they can use it for future purposes as well.

"We deliver a benefit to the customer, not only the price, but they can enjoy the budget machine, which can do lots of different work for them."

United Heavy Industries sells factory direct, which enables the company to pass on savings to customers without compromising the machine itself, Wang says.

The company also provides aftersales service and quick access to spare parts around the nation, which is what Wang believes sets it apart.

"Some other importers just import the products and when the customer has a problem there will only be the manufacturer's warranty, so customers have to deal with the overseas factory or sourcing parts by themselves, which is very hard," he says.

"Our business is different. When we import the machine, we get the parts ready as well, so if the customer needs anything we have the parts straight away.

A
United Heavy Industries provides affordable earthmoving equipment

B
UHI wheel loaders have proven popular

C
The new UHI454 tractor

"The big brands obviously have their own spare parts warehouse, but the problem is that most of our customers buy machines more for private use and they don't want to spend \$30,000-40,000 on a small machine, but they still want a reasonable service as well.

"If they want to buy filters, if they want to buy some parts or need to get some parts under warranty, we are ready straight away and in two or three days we can get a machine running again."

Every machine imported by United Heavy Industries meets Australian standards, Wang says, and the company has branches in Sydney, Melbourne, Brisbane, Adelaide, Perth, Townsville and Darwin.

This strong local presence, which has grown rapidly, has allowed UHI to understand the unique requirements of Australian farmers.

"The benefit of us is we are in the Australian market and we understand what customers need," Wang says.

"We know what customer requirements are, and especially with the tractors we ordered them, so they can match up with different brand attachments.

"This means if a customer has an attachment already, they can just use it with the new tractor and they don't need to buy a different attachment." **fm**

All-rounder

Beyond merely supplying the earthmoving equipment pastoralists and graziers need, Dixie Holdings refines the investments with its custom designs, to ensure they can go the extra mile

With a team of specialist engineers, draughtsmen and fabricators, plus new transport solutions, Dixie Holdings can help farmers get more out of their equipment than they thought possible.

One example of this was in April, Dixie delivered a customised Cat D8T dozer to a cattle station at Goondiwindi, near the Queensland-New South Wales border.

"It was fitted up with basically one of everything that we supply," Dixie Holdings manager Tom McDonald says.

"It was a brand-new machine as well and it was one of the next generation D8Ts they just introduced."

In most cases, customers will source their dozer - or other desired machine - directly from Dixie Holdings, however in this instance the D8T was bought brand-new from the OEM dealership before being picked up by Dixie and taken to its facility at Woongoolba in Brisbane's southern suburbs for the magic to happen.

There began the task of fitting it out with removable hungry boards on the pre-existing SU blade, a 26-foot (8m) pin-on Dixie stick rake, 13-foot (4m) V-series SS cutter bar, Dixie removable bolt-on drawbar and full scrub canopy.

"Everything was done in house," McDonald says.

"We modified the dozer in house using our own design, our own engineers and our own fabricators.

"We did all the paint work in house with our own blasters and painters and then delivered the machine using our own transporter and oversized pilots."

The result was a versatile, all-encompassing dozer that will allow the one machine to carry out a wide scope of works on a remote property.

"Their dozer is probably what you would look at

as the perfect station dozer, where it's very versatile and basically doing everything they would ever need to do," McDonald says.

"They do crop farming. They also do cattle farming and they've got a feedlot, so they're using the machine in different applications, and they wanted the dozer to be versatile and used for every application, so they don't have to use other machines.

"It was a fairly big investment for them and, given they were spending so much money, they wanted a multi-use dozer, basically a machine that could be used for all aspects of works that they need to carry out on their property."

The family-owned Dixie Holdings is a company with almost 50 years of history and a wealth of experience to offer.

In addition to dozers, Dixie also specialises in graders, scrapers, wheel loaders and dump trucks for the agricultural, construction and mining industries.

Attachment fabrication is far from the only area covered by Dixie, which has separate divisions covering equipment sales, rental and refurbishment plus boiler making, powertrain overhauling, logistics and heavy haulage.

Where Dixie Holdings particularly excels is in the knowledge and experience of its team, which flows through in the solutions it can offer its customers.

Examples of this were evident in the recent D8T dozer job.

"The hungry boards are an idea that we worked with the customer on to basically increase their pushing capacity in the blade," McDonald says.

"Usually, with D8s, when you want to push more, you've got to change the blade from an SU blade to a U blade.

^
A range of customisations converted this Cat D8T dozer into a multi-use machine

"That in turn changes the dimensions of the tractor for transport, so we designed hungry boards that bolt on to the side plates of the blade, which acts like a U Blade but keeps the width of the blade the same as what it usually would be.

"It increases the carrying capacity of the blade by about 25 to 35 per cent."

Also to increase simplicity, a simple pin-on system was designed for the stick rake and is an easy, five minute setup job for a lone operator, making this attachment easy to use.

The cutter bars are another example of Dixie's custom design, with a second shank added on.

Describing the cutter bars as a "big knife which goes underground about 300mm", McDonald says these make the removal of tree roots easier.

"They've got root lifters on the bottom beams, so, as the knife goes underground, these bars that stick up bring all the tree roots and everything to the surface," he says.

"It stops regrowth so you don't get the trees growing back within a few months, you only get grass growing back. It aerates the ground and removes the tree roots at the same time.

"Our design pushes the tree roots down and cuts them at the same time, stopping the tree roots wrapping around the tine and getting clogged up, which in turn increases drag and increases fuel usage.

"That way it stays clean and streamlined so that you can get along faster with less drag and use less fuel."

For more information about the scope of works offered by Dixie Holdings, visit www.dixieholdings.com.au

AG-PRIDE Quality Rotary Cutters

10 models 1.2m - 4.5m working widths

MS Series - Medium Duty

- 1.2, 1.5, 1.8m working widths
- Pressed galvanised reinforced decks
- Stump jumper blade base
- Rear wheel puncture proof tyre
- Floating headstock
- Round back reduces windrows
- Safety clutch in driveshaft

**From

Gear shift

The addition of a fourth gear made all the difference to Valentini's range of power-driven cultivation machinery

The story of Italian agricultural machinery manufacturer Valentini begins in the town of Camposampiero in the 1970s, when Antonio Valentini set out on his own after years of design and manufacturing work with leading agricultural machinery companies in the country's north.

With time, he developed a business where many of the leading European manufacturers of power-driven cultivation gear brought him hoes, harrows, mulchers and other equipment, which he joined into a folding frame configuration.

Eventually these manufacturers began to make their own frames at a cheaper cost and Valentini began to manufacture his own hoes, harrows and mulchers, but unlike the others, he focused on building them with strength and reliability.

While the search for quality is always tough, the biggest challenge Antonio faced in developing his business came with the steady increase in the power of the tractors that pull the cultivators.

Two decades ago a 120 horsepower (89kW) unit was considered large but has now pushed aside by units about 300hp (224kW).

Over time, chain drive transmissions proved to be inadequate in high horsepower applications and were replaced with a three-gear system.

As tractor horsepower rose to above 180 (134kW),

the three-gear system was found to have limitations, mainly because of the friction derived from heat.

Thicker gears, more oil and oil coolers were all tried, but Valentini realised that it was a design problem – the small top drive gear simply was not able to handle, with any type of acceptable longevity, the double problem of both transmitting the enormous power from the tractor and withstanding the backlash and shock from

All Valentini folding machines fold into well below 3m in width and are offered with an extensive range of rollers, rotors and wheels

the collision impact and inconsistent power requirements of the rotor blades.

On top of this, Valentini also started making stone crushers during this time – brutes of machines that must be built to withstand tortuous conditions such as high power, shock and heat.

For years, he appeared to be always 30hp behind as tractor powers climbed before he

Valentini Mammut rotary harrow

made a discovery that was to be the hallmark of his career, one which would catapult his products and his personal industry reputation to the highest levels, where they remain today.

In the first real advance in power-driven cultivation machinery in 50 years, Valentini developed a four-gear system, where the centre gear becomes a cluster with an intermediate gear fitting into it by way of a splined hub.

The top gear meshes with the normal middle gear, which drives the intermediate gear, which in turn meshes with the rotor drive gear.

The result is remarkable. Not only is the machine easier to drive, but the lack of heat due to friction is hard to believe. Even with Valentini's 7.7m hoe in the hotter parts of Australia, there is no need for high maintenance oil coolers.

All Valentini folding machines fold into well below 3m in width and are offered with an extensive range of rollers, rotors and wheels. **ffm**

HAY TOOLS

Wrapper’s delight

A new, larger bale wrapper and a redesigned silage trailer are among the new models to be joining Colac Ag’s range of machinery now available Down Under

Colac Ag’s range of imported hay and silage machinery has continued to expand, and this season’s additions further enhance the offering available.

The company’s philosophy is to align itself with specialist European manufacturers and import the products that best suit Australian conditions.

Elho

Elho has long been known in Australia for its bale wrappers, and new to Colac Ag’s range is the Sideliner 1790PRO wrapper.

This machine is the largest model in Elho’s range of wrappers and is built in Finland.

Heavy duty in every way, Colac Ag tested some under Australian conditions during the 2021 season and they passed the test.

This machine can easily wrap bales up to 1.8m in diameter and weighing up to 1,600kg.

It has dual arms with pre-stretchers for the plastic film.

Also in the wrapper range, Elho offers the 1540M and 1540PRO.

In recent years Elho has also become known for raking hay and silage crops with the V-Twin 950 rake. This can collect a lot of crop with working widths from 4.5 to 9.5m.

The machine also has hydraulic flotation to ensure the raking units follow the ground contours.

Material is brought into the swath and can be adjusted to have the swath up to 1.8m either side of the tractor’s centre.

Rounding out the range of Elho hay rakes is the smaller V-Twin 750, V-Twin 600 front mount and the Twin 4600 front mount rake, which can be used to turn windrows.

These rakes are gentle on the crop and limit the amount of foreign material in the windrow because of their raking action.

Elho also produces rock pickers, which Colac Ag says are working well in the Australian market.

Joskin

This year, Colac Ag is also introducing the Joskin Silo-Space2 silage trailer.

This machine has a new body, which has been designed based on the strongest features of its predecessor.

The combination of a lowered galvanised chassis with a monocoque body allowed Joskin to increase the body height to 2.28m inside and to reduce the empty weight of the trailer, resulting in a higher payload and longer lifespan.

The front wall is painted and perforated – anti-reflective to the tractor’s working lights – and has been designed to load a maximum amount of silage, while offering the user a clear view on the inside of the body.

To ensure long-term sturdiness and power when unloading, the moving floor of the Silo-Space2 standard includes two moving parts with chains driven by two hydraulic motors with side gearboxes.

Profiled slats are alternately placed to ensure an even load distribution.

Body volume on these machines ranges between 44 and 54 cubic metres.

Samasz

Polish-made Samasz is another brand under the Colac Ag umbrella.

Now established in the Australian market,

A

The Samasz heavy duty mower comes in a variety of formations

B

New to Elho’s bale wrapper range is the Sideliner 1790PRO

C

The Joskin Silo-Space2 ranges from 44–54 cubic metres

D

Schuitemaker Rapide loader wagons are available in a range of sizes

Samasz’s heavy-duty mowers come in many different formations including a triple set, which mows up to 9.4m in one sweep.

Options for these mowers include roller or flail conditioners and transporter conveyors to bring the grass into one windrow.

The biggest rotary rake has a working width of 8.4m, complemented by the 8.9m three-point linkage tedder.

Schuitemaker

Rounding out Colac Ag’s hay and silage range is Dutch-made Schuitemaker, whose wagons continue to meet the needs of Australian conditions.

The Feedo wagons for feeding out silage have a maximum capacity of 37 cubic metres; however the most popular size is 18 cubic metres.

A full steel box makes the construction of these machines durable for the long haul.

Another standard feature on the Schuitemaker Feedo range is mixing beaters at the front, which helps to ensure a smoother flow of products delivered to the cattle.

Schuitemaker also makes loader wagons in its Rapide range.

These are available with various sizes and beaters to get silage from paddock to cattle in the best standard possible. **ffm**

TECHNOLOGY

Field study

With a section control offer already under development, ifm efector’s ISOBUS gateway the Agri-Mate is set for trials Down Under in the next few months

A new product that allows ISOBUS-compatible tractors and implements to connect more easily will be tested on Australian farms in coming months.

The Agri-Mate, created by ifm efector, acts as a gateway between tractors and implements and allows them to be linked regardless of brand, saving development costs and time for manufacturers.

Feedback gained during the Australian testing phase will help to influence future updates, with plans already in place to add section control to the Agri-Mate.

Ifm product sales manager for mobile control systems Adi Kunder says some units have already been sold to customers since being introduced to Australia earlier this year.

“The next phase would be to do more field tests to nut out any other issues, get feedback from operators and farmers for our OEM [original equipment manufacturer] customers to see where we can change or what improvements we can do.

“We are hoping we will have some more results in the next two to three months.”

Described by Kunder as a “gateway”, the Agri-Mate’s purpose is to display information on a tractor’s display screens relevant to an attached implement.

It is ultimately aimed at reducing automation development times for small to medium-sized OEMs, which often create several new implements every year and struggle to have the necessary resources to devote to automating them.

“With this ISOBUS Agri-Mate, it sits in between the tractor and the implement control system, so the implement control system will have all the ifm hardware and the ISOBUS Agri-Mate will take all the information from the implement and convert that into an ISOBUS standard and display it on the universal terminal in the tractor,” Kunder says.

The next step for Agri-Mate will be the addition of section control, which ifm’s German engineers are developing in response to Australian customer feedback and which Kunder recently saw demonstrated.

It is aimed primarily at sprayer users, Kunder says, who want to spray within the boundaries of a paddock and without doubling-up on areas already covered.

“With section control, because it’s coordinating with the GPS position as well, when it sees the tractor implement is going to move over the boundary of the paddock, it turns off that section so that it’s not spraying outside the boundaries,” Kunder says.

“When it turns and comes around, it knows that it has already sprayed the section. It then turns off

so there is no overlap spraying on top of already sprayed areas, because obviously the fertilisers and chemicals are costly, and farmers want to avoid that.

“This is a feature we’re going to have, where our device would be able to work with the section control of the virtual terminal essentially and give customers an added benefit.

“Customers don’t need to know anything that happens in the background – all they get is a pre-made package from ifm on the device and we’ve got premade libraries written for our ifm controllers. They just program that part and then the visual terminal makes the decision and tells

^ The Agri-Mate sits between a tractor and an implement, takes information from the implement and displays it on a screen in the tractor cab

our device which section to turn on and off.”

Other planned changes to Agri-Mate based on customer feedback include the addition of custom images and icons such as company logos to the virtual terminal.

Kunder says this has also been passed on to ifm’s German engineers for development, as will any other suggested additions based on upcoming Australian field testing. **ifm**

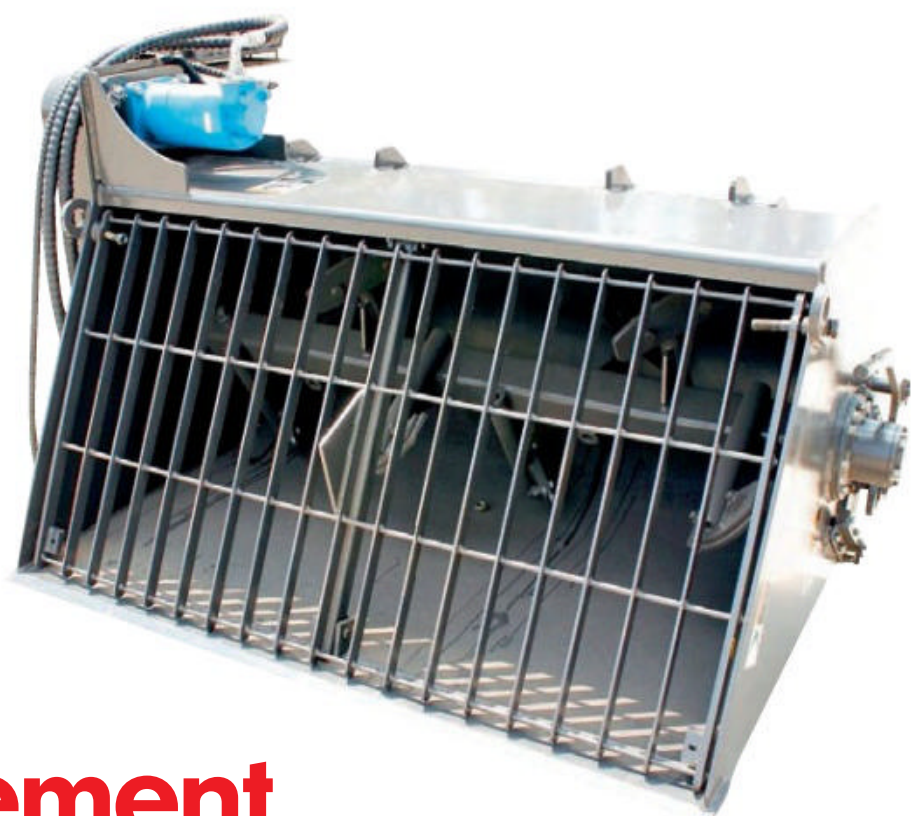

More information about the Agri-Mate, and ifm efector’s full range of technological solutions, is available at www.ifm.com/au

^ Configuration is simple using premade libraries

Cost of living

WAFarmers president Trevor Whittington questions the impact on rural jobs and cost of living of the move towards renewable energy

I've read a lot of post-election commentary over the last few weeks, most of it written by the usual suspects, many of whom think the Coalition lost because they weren't on board with the community's climate change views.

According to the chattering elite, Australia has voted to embrace the ideals of the enlightened progressives and we are now all champing at the bit to do more to address climate change.

Those with a preference for a soy latte have been busy reinforcing their views that the Coalition is out of step with the electorate and if they had just done more and signed up to even more ambitious emissions targets, then the teal seats would have remained blue seats.

However, because they didn't and because Barnaby and the Nationals are a bunch of climate deniers, then they were doomed to lose and will now remain in the political wilderness until they change their ways.

I worry about how single-issue organisations like Farmers for Climate Action, along with the Greens, teal independents and the chattering elite, are misleading the community with what drives voting decisions across Australia.

The voting results across the rural seats of Australia don't show this - the National Party lost no seats and its vote has declined only marginally.

In fact, the result for the Nationals has been very much in a steady state across the nation, with essentially no real change since the previous election. This isn't necessarily surprising as the ALP struggles to achieve 20 per cent of the vote in many rural electorates and the Greens, with their anti-coal and gas policies, struggle to be relevant.

The Nationals performed well in Victoria, with a slight increase in its primary vote, and held in NSW and Queensland, while Labor won just two seats in regional Victoria and suffered a huge swing against it. What does that tell you about the support for their 43 per cent climate policy in a very woke state?

When one looks at the rest of Australia, the Liberals successfully held onto their rural seats in both South Australia (Barker and Grey) and

**Trevor Whittington,
CEO WAFarmers**

Western Australia (O'Connor, Forrest and Durack) and in Tasmania, which is largely regional in nature, there has been a swing of around two per cent to the Liberals.

The Liberals are basically out of the wealthy suburbs and largely represent outer suburban and regional Australia, and guess what the number one election issue was across these electorates? It was not climate change, rather it was cost of living.

You will notice that the hard heads in the Labor Party are not as excited as the younger, more left leaning members as they know that two out of three voters did not vote for them, and the teals and Greens are eating away at their inner-city seats.

With the Nationals and Liberals locking up the bush, all eyes at the next election will be on the swinging marginals in the outer suburbs, something that will focus the Liberals on a crash or crash-through strategy with Dutton going back to basics and going hard on the cost of power and job losses related to the 43 per cent target. As a result,

the ALP's smart right won't be in any hurry to set any more ambitious emissions targets that will see even more pain imposed on the battlers.

Their policy of cutting emissions within eight years is the Liberals' sleeping vote winner as it eats away at the cost of living, not to mention farmers' cost of production.

Nowhere have we seen a frank conversation with rural people on who will pay when it comes to achieving Labor's target.

Why? Because the climate change champions didn't want to scare the masses with what's coming, or worse, they live in economic fantasy land and think that there are jobs in shutting down parts of the economy.

There is work in putting up wind turbines and solar panels, but it isn't a sustainable job.

As for hydrogen, it's still a dream, and when it arrives it's likely to become an expensive dream, too expensive to replace coal and gas in manufacturing urea or powering irrigated agriculture.

So far, Australia's easy emissions reduction wins have been too easy. Why? Because the sleight of hand of claiming an end to land clearing as emissions reductions have all been banked.

Now it gets hard and expensive. More renewables will require a massive new rewiring of the electricity network, dirty diesel engine emission reductions will require old cars, tractors and trucks driven to the scrap yard and replaced at owners' expense with Euro 6 engines.

New coal mines and gas projects will be forced to buy expensive offsets, which will see trees planted on farmland, destroying regional jobs, and the high cost of power will see energy-hungry regional manufacturing and irrigated agriculture being replaced by imports.

Until there is serious talk about the impact of these policies on regional jobs and agriculture, as well as the impact of having tens of thousands of windmills and solar panels covering farm land while avoiding coming out in favour of nuclear power, it is difficult to take the debate seriously. **ffm**

Looking for a machine versatile enough to load a fertiliser spreader truck, load bales and be transported easily, Laurent Contractors turned to the Schaffer 6680T - which stands out from the rest of the pack

Words and images **Dan Reymer**

Compact worker

The Schaffer 6680T telescopic loader has rapidly become a key part of the Laurent Contractors team, based in Matamata, Waikato on New Zealand's North Island.

Based in Germany, Schaffer has been in business for more than 60 years and produces compact wheel loaders. Here, we see first-hand how well those many years of knowledge, experience and engineering come together.

Quality

Some might say a job-specific machine like a wheel loader is hard to justify as they can be limited to certain jobs. The part that often gets looked past, though, is how much better they do a job than alternate machines and inevitably they end up being a machine an operator just cannot do without.

Some of the best machines in the agricultural market come from Germany, and the Schaffer factory is in the heart of it. It hasn't missed a beat on the Schaffer 6680T in regards to build quality and operation. Being near the middle of its nine-model teleloader range, it is the sort of machine that has the power to do the large jobs but, when it gets tight, it can fly in without issue.

Being the smallest loader of the professional class, the operator gets all the premium features of the larger models in a compact size. At a first glance, the headstock that supports the attached tool is nice and heavy with decent size pins and bushes, which will handle whatever task is sent their way. And, being a loader, there are limitless possibilities of what that could be.

Being spec'd on the larger, wider 550/45r22.5 tyres,

the Schaffer not only looks great, but the machine also feels stable even with the boom at full height and telescope. The bucket seems large for the size of the loader but with a full bucket of lime, there are no signs of hesitation or any feeling of the rear end becoming airborne. The thought that has gone into the layout, along with the general engineering that went into this loader, pays off when the customer turns the key.

Specs

Powering the Schaffer 6680T is a four-cylinder Deutz TCD engine, which puts out 55kW (75hp). It is connected to a pump which operates at 220 bar, from 76 litres per minute and up. This supplies a smooth and fast hydraulic system and you're not left waiting for the hydraulics to catch up to your ground position.

The 130-litre fuel tank and 120-litre hydraulic tank are well protected inside the heavy cast shell, found in the rear of the machine, putting the ballast where it's needed most. This in turn minimises the tare weight of the machine, where it sits at 5,800kg to 6,300kg. With a maximum lift capacity of 3,100kg, the Schaffer can lift an impressive amount for its compact size.

The wheelbase measures in at 2,450mm and the overall length, including the bucket, is 5,780mm. The bucket sits at 2m wide while the machine sits just under at 1,900mm. This slight decrease in width is surprisingly helpful when clearing the edges of walls in pits. You're not left taking swings at the edge or grabbing the shovel to tidy up the last of the product. Plus, with a turning circle of just a touch

over 3.7m at the tyres and 4.4m at the outer point of the bucket, it doesn't need much room to swing around and get the job done.

The axles under the loader are eight-stud, planetary final drive all coming through an automatic slip control differential. The hydrostatic gearbox has two gears, which are switchable under load, and this machine was spec'd with the 35km/h option. While 35km/h may be slow for the road it certainly helps for on-farm travel.

A hydraulic fan is standard on the Schaffer loaders. This reduces noise and removes a belt that has the potential to wear. Being hydraulic also gives Schaffer the option to make it reversible, which it has available as an optional extra - in my view worth every cent.

Operation

Climbing into the 6680T is relatively easy and trouble-free, being quite low to the ground and with handles in the right places. One of the first notable features is how well the main joystick feels in hand, along with the fact that no trigger needs to be held to activate the boom.

The buttons and controls could be better labelled, but if you're in it most days it takes only half an hour for it all to become second nature.

The hydraulic system for the boom control is extremely smooth and there was a significant amount of feel through the machine. It felt like a manual hydraulic system as they supply a lot more feel through to the operator than an electronic control system.

For a machine that shuttles between forward and

reverse all day, it does it very well, being one of the smoothest shuttles in a telehandler I've been in.

The park brake took a bit of searching to find, being down on the right-hand side of the seat. I feel this would be better located to the left of the dash in clearer sight and easier to reach.

Loading up the bucket and tipping to load into the spreader was easy thanks to the large windscreen and streamlined boom. It didn't require much space at all to achieve this and the manoeuvrability of the machine was highlighted.

Its overall dimensions are relatively small, so the spatial awareness of the machine was easy to pick up. However, it wouldn't hurt to have some wide-angle mirrors, or a reverse camera set up to let the operator reach the full potential of the compact design.

Getting the truck loaded happened in rapid time. A much larger standard loader would be needed to reach the same height, which would come at a much higher price and be more difficult to transport. The guys at Laurent Contractors have multiple uses for the Schaffer, whether loading the spreader, bales or shifting items around the yard.

They say "it's extremely versatile and the manoeuvrability is great". There were also no complaints from Matt Morrissey, who has to climb in every load to load the spreader. He says that "the door is nice and big, it's easy enough to jump in, load up and I'm back in the truck pretty quickly".

Another aspect that Laurent Contractors enjoys is that it fits on a truck and there are no worries about being over-width or over-height.

- A** Loading the spreader with ease
- B** Additional hydraulic services
- C** Heavy well-built pivot section
- D** Hydraulic tank recessed into the frame
- E** Clear unobstructed view of the front end
- F** Basic but extremely comfy joystick

G

Pluses
Very manoeuvrable
Quiet
Smooth hydraulics with great feel
No trigger that needs to be held to operate the loader
Excellent lift height and capacity
Stable
Minuses
Drive shaft is unprotected
Handbrake is in an awkward place

	Schaffer 6680T
Weight	5.6T
Tipping load	3800kg
Travel speed	20km/h
Max discharge height	3.93m
Transport length	5.05m
Transport height	2.53m
Transport width	1.9m
Emission level	Tier 3
Wheelbase	2.45m

Daily servicing

Daily servicing is always going to be a task that saves headaches in the future. So, creating a machine that is easy to service is likely to save issues down the track. In saying this, all the daily servicing can be done from ground level. With an array of pivot points and bushes on a loader, finding all the grease points can be difficult, but the design team has put a good amount of thought into the location of the grease points, as they are all easy to find and access.

A grease block is found in the centre section, which delivers grease down to the pivot section. The pivot section looked well made with heavy steel and components to handle the toughest jobs. The fuel filler and hydraulic oil filler are located under the bonnet along with the engine oil dipstick. While the dipstick being under the bonnet can be a good thing for the usual morning checks and inspections, opening it a second time in the morning to fill up once at the diesel bowser could get frustrating.

As for the engine servicing, there is a handy sticker on the side that explains all the checks and service intervals. The hydraulic lines were well routed with protective shielding where needed. The only part that caught my eye and could be an issue in the wrong application was the exposed driveshaft underneath the machine, where foreign matter could potentially get caught up.

G

Compact unit with large bucket

H

Telescopic boom gives impressive reach

Nevertheless, the 6680T was a very tidy well laid out loader with an impressive boom.

Summary

The Schaffer 6680T teleloader is compact and extremely manoeuvrable. It has the lift height and ballast in the right places to handle jobs of all shapes and sizes. With impressive hydraulic functionality and speed combined with a smooth driveline and transmission, the 6680T is the sort of machine that any operator should be happy to get into.

It's suited to a range of business sizes, from small farms to large contractors. Plus, with Schaffer offering multiple sizes in its range, there is one to suit most operations. With great manoeuvrability, excellent lift height and capacity for its size, it is easy to see how it slots into Laurent Contractors' business so well. fm

This review was conducted in New Zealand. To find out more about Schaffer Loaders in Australia, contact the team at 1300 882 161 or visit schaffer-loaders.com.au.

H

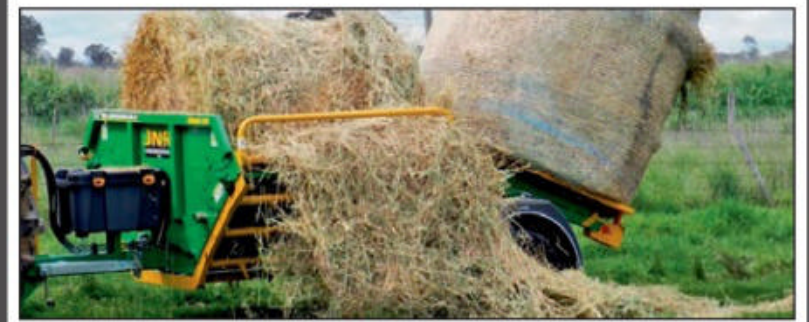

LP Series

Introducing the LP8000, 8 meter or 6 meter width Land Plane, twin mast independent for lift precision, dragging capabilities of approximately 5 cubic meters.

DG Series

The DG Series is currently being manufactured in 3.6m or 4.2m width Drag Grader has independent lift for laser precision. Dragging capabilities of approximately 3.5-4.5 cubic meters

Bale Bull Round

The BBR maintains a strong robust design capable of handling the heaviest bales. This machine is capable of carrying two bales and feeds on both sides. It is one of the only machines in the market that is able to feed the toughest of silage bales

Unfair contract terms in the poultry industry have been addressed

POULTRY

Up to scratch

Chicken processors will work with farmers and their representatives to change unfair contract terms, the ACCC has announced

Some of Australia’s largest chicken meat processors have agreed to change terms in their supplier contracts following an investigation by the Australian Competition and Consumer Commission (ACCC).

The ACCC’s Perishable Agriculture Goods Inquiry was carried out in 2020 – focusing on potentially unfair terms in supplier contracts.

Generally in the chicken meat industry, meat processors provide chicks, feed and medications to the grower and retains ownership of the birds at all times.

A contract between the processor and the grower specifies the methods the grower must use to care for the birds – and can impose some requirements on the land, sheds, water and utilities used.

According to ACCC deputy chair Mick Keogh, the ACCC investigation identified a number of potentially unfair contract terms, including terms that allowed processors to vary growers’ supply arrangements or impose additional costs on growers.

Some of the terms also required growers to make significant capital investments or contained imbalanced termination clauses.

“We were concerned that broad terms, such as allowing processors to vary supply arrangements during the term of the agreement, could potentially lead to significant financial harm to growers,” he says.

“Several processors have agreed to amend certain contract terms to address some of the ACCC’s concerns.”

Processors will engage with growers and grower representative groups directly about amendments to their agreements.

The changes that these processors have agreed to will provide some additional certainty and transparency for growers, including by clarifying the circumstances in which a processor may require growers to upgrade their farm facilities and when processors can make changes to their grower manuals.

Additional changes have been agreed to provide clarity about the circumstances in which processors can impose additional costs on growers, and to balance notice periods for termination clauses.

The news comes after the Morrison government introduced a bill to parliament in February to enhance protections against unfair contract terms in Australian Consumer Law.

Keogh says those proposed changes would enable the ACCC to seek pecuniary penalties for breaches and better protect Australian small businesses.

“The thresholds and the lack of penalties in the current unfair contract term laws create challenges for investigations involving agricultural contracts,” he says.

“We expect all chicken meat processors to continue working with growers and grower groups until the contracts they have in place are clear and balanced. We’ll be monitoring the industry to see that it happens and will re-examine these and other contracts if unfair contract term laws are reformed.” **fm**

YOUNG GROWERS

New crop

A prize for the Young Grower of the Year has shone the spotlight on some of Australia’s leading young horticulturalists

Eleven young fruit and vegetable growers have been recognised for their commitment to sustainability and the wider industry in a leading awards showcase.

Co-hosted by leading vegetable and potato growers’ association AusVeg and International Fresh Produce Association Australia – New Zealand (IFPA), the Hort Connections event is the premiere event for the Australian horticulture industry.

A total of 11 growers, spread across five states, were named as finalists for the 2022 Corteva Agriscience Young Grower of the Year, with South Australian Damien Manno named as the overall winner during a gala dinner in Brisbane.

The remaining finalists were

- Sam Boyce, MJ Hall & Sons, Tatura, Victoria
- Ruby Daly, Daly Farms and Hellfire Bluff Distillery, Marion Bay, Tasmania
- Craig Dingle, Kalfresh, Kalbar, Queensland
- Ryan Marr, Marrbiz Pty Ltd, Trentham Cliffs, New South Wales
- Josh Maunder, Aus-Ex Fruit, Bellenden Ker, Queensland
- Marlon Motlop, The Native Co, Adelaide, South Australia
- Ross Pirrone, Pirrone Bros, Ayr, Queensland
- Nicole Stevens, SA Potato Co, Parilla, South Australia
- Carl Young, Redgold, Wemen, Victoria
- Michael and Jason Agosta, AAA Farms, Werribee South, Victoria

“Each grower nominated for the award is a champion for horticulture, demonstrates a commitment to the industry and their communities, and understands the importance of sustainability to improve agriculture and the land,” award sponsor Corteva says.

The industries covered by the finalists are diverse, including a potato grower who produces premium vodka and an exotic tropical fruit farmer, while one of them – South Australian Marlon Motlop – is a former AFL player.

Motlop was also a winner of the Butler Market Gardens Environment and Sustainability Award.

The finalist who turned potatoes into vodka is 27-year-old Tasmanian Ruby Daly.

“The farm distillery is a value-add using our second-grade potatoes,” she says.

^
Ruby Daly, of Daly Farms and Hellfire Bluff Distillery, Marion Bay, Tasmania

“We produce spirits like premium potato vodka, Tasmanian gins and liqueurs – taking fresh potatoes straight from the ‘paddock to the bottle’ on the farm.

“I’m excited and shocked to be nominated for the Young Grower of the Year Award. It’s huge for me. I have no idea who put me forward, but I feel really grateful that my work is seen as worthy of recognition.

“Awards like this make a difference. They help build confidence in young farmers and show other people what a future in farming might look like, which is really important – especially for young women.”

Corteva’s marketing manager Nick Koch says the finalists showcase the diversity and depth of talent within the industry.

“All 11 shortlisted growers are helping build a stronger, more innovative and more sustainable industry, and are destined to be horticulture leaders,” he says.

“We’re incredibly fortunate to have so many brilliant young women and men choosing to forge their careers in the fields and paddocks of Australia.

“Corteva will be creating opportunities for them to connect with the alumni of previous Young Growers to continue to build a community of horticulture leaders.” **fm**

Rabobank says prices are expected to decline from a historic high

BEEF

Beefing up

Australian beef production recovery underway, but unlikely to reach full potential says Rabobank

Australia’s cattle availability will increase in the year ahead – as the national herd continues to rebuild – but supply chain limitations will impede sector growth, Rabobank says in its newly-released Australian Beef Seasonal Outlook for 2022.

In the report, titled *Recovery Well Underway but the Process Will Be Slow*, the agribusiness banking specialist says as cattle numbers start to lift, they will create additional pressures in the already-constrained supply chain and have implications for sales and prices.

“Increased cattle numbers will see some of the urgency leave the cattle-buying market, so prices will drift down. But domestic consumption and export markets are favourable, and we don’t believe there will be any rapid price drops,” the report says.

“As cattle numbers increase, buyers will become more discerning. If people are going to continue to pay high prices, they will choose the better quality cattle.”

Report author, Rabobank senior animal proteins analyst Angus Gidley-Baird, says it was expected heavier discounting would be seen of “poorer cattle and those that don’t meet specifications”.

“Additional cattle will also load up the supply chain. And existing constraints like freight costs, container access, port congestion and labour availability at processing plants will come under further pressure,” he says.

“These constraints will limit the ability to expand capacity to meet the increase in cattle numbers and may lead to some delays in processing cattle and to additional downward pressure on prices.”

Gidley-Baird says domestic beef production is set to rise in the year ahead – but less than its potential.

The report says following an “extraordinary 2021” – when limited supplies and strong producer demand drove cattle prices “even higher” – prices, particularly for young cattle, will “drift down” through 2022.

“While the strong fundamentals of high global prices, strong consumer demand and limited global supplies still support cattle prices, we feel the urgency that drove local producers’ restocking efforts will subside, and, as a result, the heat will be taken out of the market,” Gidley-Baird says.

“We believe that by the end of the year young weaner cattle prices could be about 25 per cent lower than where they started the year.

“But even with a drop of that size we will still be at historically high cattle prices and, in reality, our forecast is only taking us back to the price levels we saw at the beginning of 2021.” **ffm**

AGRICULTURE

Challenges ahead

^
Grain prices will remain high due to supply chain disruptions and high fertiliser and energy prices

Rabobank says ongoing Russia-Ukraine war will lead to higher food prices

Cost increases will be felt right across Australia’s farm sector in 2022, driven by expected further hikes in energy and, to some degree, fertiliser prices as a result of the Russia-Ukraine war, Rabobank says in a newly-released report.

In the report *The Russia-Ukraine War’s Impact on Food and Agri: What Oceania’s Food & Agri Chain has to Plan For*, the agribusiness banking specialist says disruptions to trade flows from the two major agricultural powerhouses of Russia and Ukraine have had a major direct impact on global grains markets and will continue to keep global grain and food prices elevated throughout 2022 “and likely beyond”.

But it is the war’s impact on the key agricultural inputs of fuel and fertiliser – sending prices of both skyrocketing – which will cut into farmer margins in a range of sectors including not just grain, but also livestock and dairy, fresh produce, tree nuts and sugar, the report says.

The report says the bank’s analysis shows while the European Union’s latest sanction plans – which entail a move to ban Russian oil imports by late 2022 – will have a relatively small impact on grain and also fertiliser prices, there will be significant increases for energy prices, which are already very high, as a consequence.

Energy prices – both oil and gas – will rise further, and farmers and the food supply chain will have to prepare for continued high and volatile prices, says report author, RaboResearch general manager for Australia and New Zealand Stefan Vogel.

“For the Australian food and agri sector, the implications of the planned next round of EU

sanctions on Russia are therefore more negative than positive as prices of farming outputs like grains are expected to move substantially less upward than those of input costs like energy and, to some degree, fertiliser,” he says.

“Farmers and the food supply chain will have to plan for elevated input costs, not only for fertilisers, but also because of strong energy prices.”

Global fertiliser prices reached all-time highs in early April, the report says – and not just due to the elevated grain prices, but also because Russia and Belarus are major exporters of various fertiliser types.

“Fertiliser prices elevate with grain prices and the current high price period is not an exception,” Vogel says.

“And while Australia does not typically import much of its fertiliser needs from the Black Sea region, we are importing most of our needs from the world market and, therefore, we will still face a tough fertiliser market in the coming months.

“Given Australia’s import dependence for fertiliser, our fertiliser chain is more vulnerable than usual.”

And there is no relief expected ‘at the bowser’ any time soon, with the bank saying energy prices face a further big price “upside” due to the EU’s plan to ban Russian oil imports by late 2022.

“As Australia is a net importer of crude oil, the global energy price volatility will be felt by consumers here,” Vogel says.

“Crude oil and diesel price increases due to the war will add to costs in farming and the supply chain.” **ffm**

CROPS

Hat-trick hopes

Australia may produce a third consecutive bumper winter crop harvest in 2022-23, according to Rabobank

Rabobank says in its 2022/23 Winter Crop Outlook that this year's total planted crop area is forecast to reach a record 23.83 million hectares.

This would be nearly one per cent up on last year's record planting and 11 per cent above the five-year average. It includes a 1.4 per cent lift in wheat and a record canola planting, up 20.9 per cent on last year, albeit at the expense of barley, oats and pulses.

This forecast boost in Australian production comes at a time of poor production and export constraints for many countries around the world, prompting the United Nations to warn that the world is on the brink of a food crisis.

Locally, the bank says, "hopes are on" another large winter crop to allow Australian farmers to secure good margins in the face of high costs for inputs including fertiliser, fuel, freight and agrochemicals.

Across the states, the report says, winter plantings are forecast to be up on last year by 10 per cent in Victoria and eight per cent in Queensland. New South Wales, South Australia and Western Australia are expected to see small contractions in planted area - of two per cent, one per cent and one per cent, respectively.

Production

Combined with the favourable seasonal outlook for the year ahead, Rabobank says, the forecast record national winter crop planting - currently underway across the country - should see Australia on track to deliver another above-average grain harvest for this season.

Report co-author, RaboResearch agricultural analyst Dennis Voznesenski says that while the outlook is for another bumper harvest, it was too early in the season to tell if the record planting would deliver another record in production this year.

"At this point in time, until the crop is more progressed, and we can see if there are any surprises in store, we have been conservative in our production volume estimates. In particular we're mindful of the slow planting progress in NSW and the corresponding decline in yield potential with late planting, as well as overly wet growing conditions," he says.

Based on current plantings and slightly above-average yield expectations, the bank estimates Australia will be on track to deliver total wheat production of 32.5 million tonnes (down 10 per cent on last year), barley of 11 million tonnes (down 18 per cent) and canola of 5.8 million tonnes (down nine per cent).

Exports and market

This would see Australia with "well above-average export potential again in 2022/23", the outlook says.

Report co-author, RaboResearch senior commodities analyst Cheryl Kalisch Gordon says a prospective third consecutive bumper harvest would mean Australia would be "well placed to help support global wheat needs in 2022/23".

"Excess carryover from 2021/22, together with another above-average harvest and strong global demand, means we expect Australia could export around 26 million tonnes of wheat again in 2022/23, almost 50 per cent above the 10-year average and more than 50 per cent above the five-year average," she says.

Rabobank says Australia is also forecast to deliver an impressive barley and canola export program in 2022/23, albeit down on last year. The bank currently sees barley exports of 7.5 million tonnes (down 16 per cent on the previous year) and canola exports at 4.5 million tonnes (down six per cent).

For chickpeas and niche grain and pulses, the

Due to high wheat and corn prices, feed barley will be in high demand

report says, ongoing issues with the availability, reliability and cost of container freight - which have been further adversely impacted by China's ongoing COVID-19 lockdowns - are expected to continue to challenge boxed freight and constrain exports.

Global stocks of grains and oilseeds are set to remain low and move lower in the coming year, Rabobank says, supporting elevated global prices through 2022/23.

The bank expects global wheat prices to continue trading near current levels with Chicago Board of Trade (CBOT) wheat to trade around USc 1100 per bushel out to the first half of 2023. But it expects prices to be extremely volatile in this higher range, as markets react to news of changes in crop prospects and what can ultimately be exported from Ukraine, Russia and India.

Strong demand for feed barley as a substitute for high-priced wheat and corn feed should keep global barley consumption near or above last year's levels and be supportive of global prices, Rabobank says. For canola - which sits in the broader edible oil market - prices are also expected to remain strong.

Local prices for wheat, barley and canola are expected to remain historically strong, Rabobank says, albeit continuing to trade at a discount to global levels.

When it comes to farm inputs, prices for most are believed to have peaked, but are expected to remain elevated due to the high cost of production and freight, as well as the sanctions on Russia and Belarus, according to the Rabobank outlook.

Remain vigilant

Farmers have been warned to keep an eye out for mouse activity, with reports of large populations in Western Australia

The government’s Grains Research & Development Corporation (GRDC) has warned farmers that they should act early to control mouse populations after last year’s outbreak caused significant damage to crops and stores.

The GRDC has invested in a number of CSIRO’s mouse management research projects, including grower workshops on mouse management that were conducted in Western Australia earlier this year.

Steve Henry, mouse researcher from Australia’s national science agency CSIRO says that while there’s been a reported increase in mouse activity across the regions, the presence of mice seems to be dependent on paddock history and the availability of food and shelter.

“Mouse numbers are patchy in most parts of the country, however there are widespread reports of high mouse activity in Western Australia,” he says.

“A lot of regions in the north have reported mice sightings but recent, widespread rain will help drive those numbers down.”

Henry says that with expected high prices for winter crops this season, it is more important than ever that growers take early action to control mice and protect high value crops.

“Demand for canola is high, seed is in short supply and strong prices are predicted so we want to prevent growers from having to re-sow their crops due to mouse damage,” he said.

“If mice are present, farmers should bait with 50 grams per kilogram of zinc phosphide [ZnP].

“This will help push numbers down over winter to ensure mice start breeding from a lower population base next spring.”

Henry says the most effective way for growers to gauge mouse numbers at this time of year was to walk through paddocks and look for active burrows.

“After last year’s season there are lots of big stubbles, which can easily hide the signs of mouse activity.

“Burrows can be patchy in their distribution, so growers should walk through different parts of the paddock and look for signs of mice.”

The GRDC has a range of tools and information on its website to help with mouse management

GRDC pests manager Dr Leigh Nelson says she understands an increase in mouse activity would have growers wary after last year’s outbreak impacted communities financially and mentally.

“GRDC continues to provide up-to-date information and resources to growers to help them react to an increase in mouse activity,” she says.

“Our priority is working with growers and communities to identify mouse activity and implement effective management strategies to prevent damage to their enterprises.”

GRDC has produced mouse chew cards to measure activity in a paddock. These can be downloaded along with more information about mouse control from <https://grdc.com.au>.

Farmers are also encouraged to report and map regional mouse activity using the www.feralscan.org.au/mousealert website. **fm**

There is a large potential for growing Australia's alternative protein production

ALTERNATIVE PROTEIN

Another way

Australia's opportunity to become a global player in alternative proteins market

A key finding from the recent AltProteins22 conference, held in Melbourne in May, was that Australia will soon become a global player in alternative proteins, with the market significantly expanding to include a variety of plant protein-infused foods.

Cheese made from dairy proteins but not produced from cow milk could hit our supermarket shelves as early as Christmas, while cultivated meat such as kangaroo meatballs and chicken schnitzels grown from animal cells could be on sale soon.

Conference attendees heard that the expansion from traditional plant-based meat products is a \$7.5 billion growth opportunity for Australia's agricultural industry, while Asian countries' demand for plant-based meat products is expected to increase by 200 per cent in the next five years.

Co-founder and executive director of Australian Plant Proteins Phil McFarlane says that recent investment in alternative proteins, including \$378 million by government and the private sector, is a small drop in the ocean compared to the ongoing investment opportunity needed to make Australia a manufacturing hub that produces high-grade plant-based protein ingredients.

"This level of investment is a good start, but it certainly doesn't represent the complete journey Australia needs to undertake to become a leading powerhouse in plant protein production. That opportunity is real and it's right in front of us," he says.

Professor Michelle Colgrave, leader of CSIRO's Future Protein Mission, says that as well as developing new plant protein products, farmers could add value by breeding new varieties of plant crops that are higher in protein, good quality, easy to digest and even free from allergens.

"A lot of plant-based ingredients are imported, but we can build Australia's manufacturing expertise to turn legumes including soybean, fava beans and chickpeas into higher value ingredients onshore to create 100 per cent Australian-made plant-based products," Professor Colgrave says.

"The future food gap is where plant-based and novel proteins, like fermentation-derived products, will have an important role to play."

GOAT

For the kids

A project will research how to improve productivity, profitability and welfare in the goat meat industry

Largest research investment for the Australian goat industry announced

Improving reproductive performance to increase productivity and profitability on-farm will be the focus of the nation's largest research project for the goat industry, according to Meat and Livestock Australia (MLA).

The \$3.7 million project is being funded through the MLA Donor Company (MDC) in partnership with the University of Queensland (UQ).

MLA group manager for productivity and animal wellbeing David Beatty says there is an opportunity to increase the production of goats domestically due to their ability to adapt and thrive in a range of challenging environments.

"We've seen changes to many grassland and pastoral systems resulting in increased shrubs and woody regrowth, and goats are primed to take advantage of these environmental changes because of their unique abilities to digest and thrive on low quality diets containing high levels of fibre and anti-nutritional factors," Beatty says.

"Through this research, the industry will benefit from developing reproductive benchmarks for different production systems, investigating the impact that different management strategies have on reproduction performance and gaining insights into what causes kid losses among goats."

To address these opportunities and challenges this project will:

- identify the drivers of change in goat production systems

- benchmark goat reproductive performance (e.g. pregnancy scanning, kid survival) across five seasons and across a range of production system types
- demonstrate increased productivity, profitability and welfare through improved management on commercial goat farms.

Over five years, data will be captured from a minimum of 15 commercial properties and 15,000 animals.

UQ and MLA will conduct regular surveys of producers to determine the drivers of change in production systems, as well as perceptions on the future of the goat industry.

Three focus groups will also be formed to contribute to engagement and development of demonstration farms in each of the production system types: extensive, semi-extensive and intensive.

Professor of meat science Louw Hoffman from UQ's Queensland Alliance for Agriculture and Food Innovation says the goat industry is in a transformative stage, changing from extensive free range, low input systems into more intensively managed systems.

"As an animal scientist, I am excited to see and document how goat producers apply and adapt standard livestock management practices to suit the needs of their goat enterprises," Hoffman says.

New Agriculture Minister Murray Watt

GOVERNMENT

Watt's up

Queenslander Murray Watt has been appointed Australia's new Agriculture Minister

Industry groups have welcomed the appointment of Queensland senator Murray Watt as Australia's new minister for Agriculture, Fisheries and Forestry.

Watt, 49, comes to the role after serving as Labor's Shadow Minister for Northern Australia, Shadow Minister for Disaster and Emergency Management and Shadow Minister for Queensland Resources.

Before that, he spent time as a member of the Queensland Legislative Assembly, a public servant, judge's associate and political advisor.

Vegetable and potato growers industry body AusVeg chief executive Michael Coote welcomed the appointment, saying he looked forward to working with him and the new government to support the industry as it faces new challenges and potential opportunities.

"It has been a tough few years for many Australian growers, as issues such as labour shortages, input cost increases, floods and other weather events impact farms, property and regional towns and services," Coote says.

In particular, Coote says, he will advocate for an expansion of the pool of workers to which the Australian Agriculture Visa will apply.

"The Australian agriculture industry is fortunate to have many strong and passionate advocates that are committed to supporting the industry and the many thousands of workers that contribute to regional businesses and their communities," he adds.

"I look forward to working with Minister Watt, and the Albanese government to help realise the potential for our industry to thrive into the future, particularly on ensuring our industry has access to a reliable, efficient and accessible workforce, and a robust biosecurity system."

National Farmers' Federation president Fiona Simson also welcomed the appointment.

"Now more than ever agriculture needs strong leadership as our farmers tackle the challenges of climate change, workforce shortages, supply chain disruptions and biosecurity threats from overseas," she says.

Simson says that despite these challenges it was an exciting time for agriculture, and added that she was pleased there were four portfolios awarded that explicitly referenced regions.

"We will continue the already strong relationship with Minister Watt and other Albanese government ministers who are key to progressing these priorities so agriculture can reach its goal to be a \$100 billion industry by 2030," she says.

"It is also very important to us to engage with the Opposition and crossbench on these issues vital to farmers and the bush."

AWARD

2022 QLD AgriFutures Rural Women's Award Winner, Rebecca Bradshaw

2022 AgriFutures Rural Women's Award National Finalists revealed

Seven women have been recognised for their contribution to Australia's rural and emerging industries, businesses and communities by being named national finalists of the 2022 AgriFutures Rural Women's Award.

Women from all over Australia were encouraged to apply with a project, business or program having a positive impact on rural and emerging industries, businesses, and communities.

Each of the seven female leaders will receive a \$15,000 Westpac grant to help boost, expand or elevate their work, with the National Winner awarded an additional \$20,000 and national runner up an additional \$15,000.

AgriFutures Australia managing director John Harvey says he's thrilled with the diverse and innovative projects that were submitted this year.

"It's an exciting year for the AgriFutures Rural Women's Award, with our seven national finalists already making such a positive influence in their industries and communities with their initiatives," he says.

"We're excited to provide these women with a platform to not only build on their leadership skills to drive change in rural and regional Australia, but also inspire and support other women whilst doing so."

The 2022 AgriFutures Rural Women's Award national finalists are as follows

NT - Kylie Jones, Alice Springs

Jones is working to improve the educational support for families living in remote and isolated areas. She gave up her job as a teacher to found RAISE Education, a not-for-profit organisation that provides individualised learning support by fostering connection and belonging for geographically isolated children, home tutors and parents.

TAS - Stephanie Trethewey, Dunorlan

Trethewey created Australia's first personalised online rural mothers' group. Motherland Village provides greater opportunities for rural mums across the country to find connection and support, regardless of their location.

VIC - Kimberley Furness, Strathfieldsaye

Furness is connecting regional and rural women through her magazine, OAK Magazine. The independent print publication is dedicated to female entrepreneurs and women in business across regional and rural Australia.

WA - Louise O'Neill, Denmark

O'Neill is committed to improving the mental and physical wellbeing of rural communities. Her business, Farm Life Fitness, aims to overcome the constraints of long distances in rural areas to deliver one-on-one coaching and live online group fitness workouts.

NSW/ACT - Josie Clarke, Bellimbopinni

Clarke is passionate about inclusivity in the agriculture industry, particularly giving a voice to those with a disability. She developed Ability Agriculture to raise awareness and provide opportunities for those with disabilities through the provision of an online platform and community on Facebook and Instagram that shares the stories of those with a disability in agriculture.

SA - Robyn Verrall, McCallum

Verrall's goal is to reduce food insecurity and increase food affordability in rural, regional and First Nations communities in Australia. She is a director, founder and business advisor of Kere to Country, an Aboriginal owned-and-operated food supply company bringing high quality and affordable meat into First Nations communities in South Australia and the Northern Territory.

QLD - Rebecca Bradshaw, Jackson

Bradshaw established the first private, child health nurse-led service to be delivered online in Queensland. Through the Award, she hopes to expand the reach of her service to more rural communities.

The seven women will represent their state or territory at the 2022 AgriFutures Rural Women's Award Gala Dinner and National Announcement on September 6, 2022 at the Great Hall in Parliament House, where the National Winner and National Runner Up will be announced.

The Green One

GrainRite

Self Propelled Augers

are designed and built strong and tough in Australia for Australia's demanding conditions. Finger tip hydraulic controls allow the operator to raise & lower each end, ground drive, and steer.

Heavy duty barrel and frames reduces operation vibration considerably - less vibration means less grain damage. Reverse gear box with positive lock allows quick and easy cleanout.

All our augers come standard with highway lighting, oversize sign, new 10 ply tyres, aluminium mud guards, fire extinguisher, drop spouts, cast iron pulleys, and many more features and options.

GrainRite Augers have a 10.75" width barrel that is 2.5mm thick. GrainRite Augers are available in 35', 50' & 60' lengths.

Currently seeking a:

SALES MANAGER NEW ZEALAND AND AUSTRALIA

Trioliet BV is a leading international manufacturer of feeding equipment for cattle located in the Netherlands. We are currently seeking a Sales Manager for New Zealand and Australia.

The primary responsibility of this position is to provide support to the existing dealers and to continue building the dealer network in new areas. The home based office should be located either in New Zealand or in Australia.

What you'll do:

- Develop and sustain strong partner relationships with our dealers;
- Represent Trioliet in the local market, brand and build Trioliet's company profile with local influencers and provide expertise to the industry;
- Promote Trioliet's range of products to dealers and end-users and educate them on the full use of our products and solutions;
- Develop a sales growth plan for market expansion within the territory;
- Provide market insight on competitor activity;
- Produce sales forecasts on an annual basis and in monthly updates;
- Represent the organization at trade shows, events, and demonstrations;
- Ability to manage personal goals, corporate objectives and maintain a customer focus;
- On-site dealer personnel sales training;
- Other reasonable duties.

Visit our website for more details

If you are this motivated sales professional with an agricultural background and strong commercial skills, who enjoys to work independently and enjoys to travel, please apply or contact us for additional information.

FORKLIFTS

Hybrid theory

Toyota Material Handling Australia (TMHA) showcases automated Toyota RAE160 reach forklift at Auspack

The machine was autonomously picking up pallets at the show

TMHA showcased its automated Toyota RAE160 automatic guided vehicle (AGV) reach forklift at the 2022 Auspack Packaging & Processing Machinery expo held in Melbourne in May.

The autonomous 1.6-tonne capacity AGV reach forklift, featuring a 10-metre mast, was on display and in action at TMHA's stand, receiving a large amount of attendee interest.

The Toyota RAE160 reach forklift (also available in 2- and 2.5-tonne capacity models) was constantly moving pallets from floor position into a rack and then back again.

The forklift integrates with warehouse management systems to operate according to a customer's unique requirements. It uses a laser-based navigation system and complex range of sensors to safely and accurately handle materials, automatically.

The Toyota RAE range of autonomous material handling equipment is designed and manufactured by Toyota Material Handling Europe, with programming and installation performed locally by TMHA engineers.

The demonstrator Toyota RAE160 reach forklift at Auspack was fitted with 3D cameras, which further enhance its load detection and rack detection capabilities.

In recent years there has been a shift towards automating warehouse logistics where conventional forklifts were predominantly used. This has been due to large fluctuations in throughput demands,

leading to labour issues, improved affordability and shorter return-on-investment periods. COVID-19 has also had an impact, further increasing demand for autonomous material handling solutions.

The RAE160 AGV reach forklift can also be operated manually, providing the best of both worlds.

"A major thing that sets us apart in the market is that our Toyota RAE AGV reach forklifts are based on the manual platform and so can also be operated as a manual vehicle, as well as being autonomous," says TMHA product manager - automation Neil Beveridge.

"So, in that sense, it's actually a 'hybrid' vehicle, which makes it extremely attractive to the industry due to its ability to be used manually, helping in the transition between manual and autonomous processes. End-users are far less intimidated by the introduction of hybrid vehicles, as there is always a manual roll-back option."

Beveridge says that, like manual-only Toyota reach forklifts, the Toyota RAE AGV forklifts are very reliable and highly serviceable.

"Unlike other automated equipment, which tends to be customised, our AGVs all benefit from the consistency of the Toyota Production System, which ensures optimal quality, durability and reliability," he adds. *fm*

TERMS AND CONDITIONS

Acceptance of all advertising is subject to review and approval by management, the publisher reserves the right to edit, revise or reject any advertisements for any reason. The Publisher's liability for damages resulting from errors in any advertising that it publishes or from its failure to publish any advertisement that it has agreed to publish shall be limited to the amount it actually received in consideration for its agreement to publish the advertisements in question. The Publisher shall not be responsible for any special, incidental or consequential damages suffered by any party resulting from its errors and/or omissions. The advertiser accepts all liability for the content of all advertising supplied by it and agrees to defend, indemnify and hold harmless the Publisher from any and all claims. All photographs become the property of Prime Creative Media Pty Ltd. For dealer and commercial advertising these terms and conditions should be read in conjunction with the terms, conditions, warranties and indemnities published in our dealer and commercial rate cards.

The publisher accepts no responsibility or liability for any losses incurred by a buyer responding to an advertisement in this magazine. NEED HELP ON THE FARM? WE'RE HERE FOR YOU!

- Max Capacity: 3,000 kg
- Max Lifting Height: 6.35 m

- Max Power: 98 hp (73.4 kW)
- Max Speed 35 km/h

Designed specifically to meet the needs of the Australian poultry industry, the Poultry Pro is built tough and reliable for the harshest conditions. With a specially designed air filter system, a rollover boomhead for efficient bucket emptying, LED lights designed to avoid startling poultry, and a number of additional features, the Dieci Poultry Pro sets the standard for reliability, safety and operator comfort for these demanding work environments.

Looking for something else? Check out our agricultural telehandlers below, including our specialty range designed to suit the harshest Australian conditions.
