AWARDS

Solid staff experience leads to corporate nod for Temora-based dealer

Temora triumphs

New South Wales dealer Temora Truck and Tractor has been named as New Holland's 2022 Dealer of the Year.

The announcement was made as the manufacturer celebrated "excellence in performance and service quality across its extensive network of 104 dealers Australia-wide."

Located in the state's Riverina region, Temora Truck and Tractor was founded in 1980 and joined the Agricultural Equipment Holdings (AEH) group three years ago.

It has two fully equipped onsite workshops and offers heavy vehicle equipment sales, parts, accessories and servicing for agricultural and construction machinery.

The prestigious award was complemented by also being New Holland's High Horsepower Most Improved Performance category winner, while in a separate event last year the dealership was runner-up in the 'Excellence in Small Business' category of the Temora Business Awards.

Dealer principal David Thompson says both the overall award and high horsepower recognition are significant for the business.

"This award is testament to the dedication and commitment of our team, and recognition of the support from the Temora Agriculture community and the AEH Group," he says.

"The combination of long-standing staff experience and the passion of our team reflects the importance we place on the ultimate customer experience.

"By continually upskilling our team members with product knowledge, customer service skills, and people management training, we are confident in their ability to understand our customers' needs to ensure the ultimate customer experience.

"Broadacre farming is an important market for Temora Truck and Tractor. With the introduction of the Precision Land Management (PLM) Intelligence within New Holland's high horsepower range, we've implemented internal training and demonstration workshops for our sales and parts and service teams to secure our place in the market, providing a superior

Dealer Principal David Thompson and Branch Manager Emma Gilbert

product and customer confidence in strong aftersales support."

In addition to the trophy and prestige, Temora Truck and Tractor also receives \$20,000 to spend in the business to "enhance their customers' experience with the New Holland brand"

New Holland's Precision Land Management (PLM) Dealer of The Year was Ronco Motors.

It is the second straight win for Ronco, a third generation family-owned business based in South Australia and with three dealerships.

Amazone has made a performance upgrade to one of its cultivator-drills, adding a forward-mounted knife roller to help increase efficiency in the paddock.

drilling more effective, distributor Claas Harvest Centre says

The machine in question is the Cirrus 6003-2 folding trailed combination cultivator-drill, which has received the knife roller

to help shred standing vegetation or tall stubble.

It features a unique chevron knife arrangement, which Amazone says intensively chops standing organic material at right angles to the direction of travel.

The remaining residue is then aligned longitudinally by the

The changes are designed to both save farmers time and maintain soil structure

Amazone's Cirrus 6003-2 folding trailed combination cultivator-drill

cutting discs on the standard Cirrus platform, the company

Claas Harvest Centre Product Manager - Amazone, Joshua Patrick, says the changes will help to improve the effectiveness of direct-drilling operations for farmers.

"This unit will save an additional run with a mulcher, roller or disc harrow as well as helping to preserve precious soil moisture and structure," he says.

"The roller has an additional benefit in crumbling cloddy soils, which helps to increase seed placement accuracy and even crop emergence in a wide range of soil conditions.

"Effective shredding and incorporation of stubble is also an important part of good field hygiene and integrated disease management programs."

Each knife segment of the roller follows the ground contour independently, preventing lateral pull and maintaining a consistent cut across the entire working width.

"The reversible knives are made from boron steel to ensure a long operating life and the roller mounts have spherical bearings and face seals," Patrick says.

"The knives are recessed into the round tube on the roller and the central core of the roller is resistant to the build-up of stones and dirt."

Amazone machinery is distributed in Australia and New Zealand via the Claas Harvest Centre network and selected independent dealerships.

South Australian rural merchandise company Cox Rural will merge with New South Wales-based Delta Agribusiness from July 1, the companies have announced.

The companies said the merger would deliver an increase in business scale and financial capacity, with both businesses to remain privately owned and independent.

Cox Rural principal Lachy Cox has taken a "substantial" equity ownership position" in the combined business and will continue to manage Cox Rural's branch network with the existing management team.

Delta Ag has 53 company owned locations across NSW, Queensland and Victoria, as well as 40 independent wholesale customers across WA, through subsidiary business David Grays Aglink, saying the deal will broaden its geographic and seasonal diversity, it says.

"This creates a more balanced overall agribusiness to deliver enhanced long-term diversity and sustainability, with the merger with Cox Rural adding a great geographical footprint into SA," the company says.

"The merger will ensure that the management, staff, locations, and the products and services we provide will remain just as they have been, but with the added strength of a stronger resource base to meet our customer's needs."

Delta Ag managing director Gerard Hines welcomed Lachy and the rest of the Cox Rural team to the company, noting that Lachy would be keeping his senior management and leadership position across the business.

"This means Lachy retains a high level of "skin in the game" and maintains an unfettered desire to ensure Cox Rural continues its proud tradition in the SA communities that it services," he says.

"The combined commercial and agronomic experience will greatly strengthen the overall value proposition to clients, as

Cox Rural will retain its independence following the merger, it says

both businesses will bring new ideas and synergies to the table for the benefit of our clients.

"The combined group will have 66 agronomist/farm consultants, and an enhanced commitment to research and development trial work," Hines adds.

Lachy says Delta was the obvious choice in finding a suitable partner to merge with - saying it has "a very well-aligned culture and care for its team of people and customers alike."

"This merger will provide increased efficiencies, enhanced buying power, and provide the resources and one team approach required to grow and innovate," he says.

"It does this without compromising our independence and autonomy, not only a benefit to Cox Rural and its team, but most importantly its strong and highly valued customers."

"This is a great opportunity for our highly valued team to be able to become a shareholder and share in the success of the overall business," he adds.

"The increased scale of the combined businesses provides further career opportunities for our terrific team, and we believe will only build on the positive outcomes that we strive to deliver to our clients"

The companies added that it would be business as usual until the merger was finalised, with clients to receive the same trading models, and able to trade normally without interruption.

All existing Cox Rural customers debtor accounts will remain as is, with existing commercial agreements retained, they added, with Delta's seasonal finance products to be available to Cox Rural customers following the merger.

PRODUCTION

Gearing up

HUST E

New Zealand farming equipment manufacturer Hustler Equipment will almost double production capacity ahead of planned product launches

Hustler has taken over McLaren Stainless' facilities in the New **Zealand town of Hastings**

Hustler, which specialises in feeding, handling and spraying equipment and has a strong Australian presence through its facility in Melbourne, will take over the facility at Hastings in the Hawke's Bay region of New Zealand's North Island.

The move will see Hustler gain an extra 4,000 square metres of office, fabrication, plate processing and machining space, adding to the 8,000 square metre global headquarters the company already has.

Hustler says the move will "virtually double" its domestic production capacity and was prompted by global supply chain issues.

"This was a logical step to overcome some of the current supply chain challenges in the industry and to help us keep up with the global demand for Hustler's innovation," Hustler Equipment CEO Brent Currie says.

"This new development enables us to expand our manufacturing and innovation capabilities and provides us with more in control of our supply chain, raw material inventories."

McLaren Stainless has manufactured food processing equipment for more than a century and has worked closely with Hustler for many years, providing expertise in subcontracted fabrication, plate processing and machining.

Key McLaren Stainless staff will be retained as part of

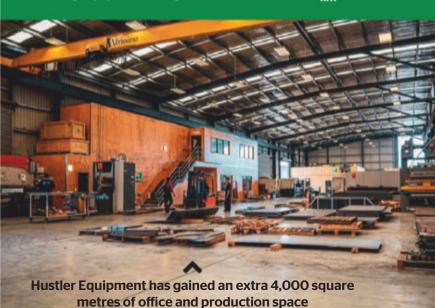

The acquisition marks another step forward for Hustler, which recently opened an office and assembly plant in the United Kingdom to cater to the European market.

Hustler also plans to launch several new products later this year, including feeding and handling equipment. which Currie says is catering to increasing demand.

"Feeding out equipment is crucial for the farming industry as the global demand for dairy and meat products is steadily increasing," he says.

"We reached a point where it became necessary to find a solution to meet the demand of the farmers who did a fantastic job, keeping feeding the world in a pandemic context.

"Now, we must do our bit to help them to keep going by continuing to provide quickly available, innovative farming equipment and great customer service."

FORESTRY

Fully mobile

New app lets operators monitor FAE forestry mulchers on skid steers using its Sonic connectivity system

A new app developed by forestry products manufacturer FAE for use with mulchers using its Sonic system will help operators get more out of their purchases, the company says. Exclusive to FAE, the Sonic system regulates the torque of

the mulcher head in real time, based on the power needed to do the job. It also calibrates the hydraulic parameters of the mulcher

that drives it - meaning it always works at maximum capacity. Complementing this, the app lets users check that the Sonic calibration is correct and keep tabs on the mulcher in real time, as well as notifying them of any malfunctions when they happen.

for instant and precise pairing of the mulcher to the machine

The app's integrated diagnostics system and real-time monitoring of the main parameters assist in resolving any

There is also the option to send a status report, which ensures getting assistance will be quick and easy.

The new app has been developed specifically for FAE's mulchers that attach to skid steers and is currently only

The app is available on iOS devices

available for iOS devices; but FAE says it aims to release a version for Sonic-powered excavator heads and Android devices in future.

To use the FAE app, simply download it from Apple's App Store, connect it to the head's WiFi, launch the app and add your head. mm

John Deere says battery-powered tractors will soon be on Australian farms, marking a "monumental shift" in the company's production.

The manufacturer made the announcement at HortConnections in Brisbane in early June, saying the first electric tractor will be launched in 2026.

"Machinery of this kind will create a monumental shift, not only for John Deere as a manufacturer, but also for Australian agriculture," John Deere Australia and New Zealand production system manager Steph Gersekowski says.

"In less than four years, horticulture farmers will be able to leverage this intelligent and efficient equipment across their farms, creating what can genuinely be described as a significant step-change for high-value crop production."

Gersekowski says reducing carbon emissions, improving safety and increasing productivity are among the benefits of the battery-powered tractor.

Deere acquired majority ownership of high-density and high-durability battery manufacturer Kreisel Electric earlier this year, a move which helped accelerate Deere's "electrification journey".

Gersekowski says the next step for Australia will be testing of the prototype tractor on local farms.

"A trial with a prototype of the battery electric util-

John Deere says battery-powered tractors will soon be on Australian farms

ity tractor will soon commence on Australian farms to extensively test the equipment under our nation's unique farming conditions," she says.

"Alongside the tractor, John Deere will also bring electric batteries and chargers to market to facilitate the new technology. We believe this move will create a mindset shift towards power and will prioritise the use of green energy on farms."

She says Deere's customer research showed up to 70 per cent of horticulture farmers would like to purchase an electric machine and hopes the announcement will be a step forward for the industry.

"Rather than a futuristic ideal, electrification has become today's expectation," she says.

"Australian agriculture, and in particular the horticulture sector, is facing immense challenges and opportunities in providing a growing worldwide population with food.

"Delivering autonomous and electrically powered tractors is among the solutions John Deere is providing farmers to harness Australian agriculture's immense opportunities of meeting this increased global food demand.

"The horticulture industry is primed to leap forward with this technology, as many farmers are already leveraging John Deere's Digital Ecosystem to direct and monitor the flow of machinery across their farms."

bobcatofaustralia

Bobcat Australia

With four models available with load volumes ranging from 26.8 to 30 cubic metres, the Bergmann Royal loader wagon boasts a unique 2-rotor system (cutting and press rotor) and is available locally through TTMI.

The German manufacturer is introducing a new option for its 2022 models, a wide guide roller arranged behind the unit's pick-up.

For use on hilly terrain or on soils with a low load-bearing capacity, the roller supports the pick-up's height control in addition to the lateral guide wheels, as a larger area of the ground is scanned.

For ideal adjustment to the working height of the pick-up, the guide roller's setting levels have been increased from four to six for an even more accurate guide roller setting.

The result: even neater crop uptake, resulting in

higher fodder quality. It also reduces wear and tear of the pick-up's spring-loaded tines and sward damage.

Among the other changes made to the new model are the addition of a rounded extension between the rigid front wall and the filler hood – for optimum filling and maximum cargo space use.

The press rotor feeds the cut green fodder upwards along the front wall into the cargo space, and the rounded front wall extension ensures an even transition to the filler hood, so that the herbage slides more easily into the cargo space.

The filler hood is attached to the new front wall extension via several hinge points and is spring-loaded and suspended on rubber discs at the rear, as well as having better suspension to help reduce noise.

The wagons will also have a new, straight tailgate with automatic locking and release of the same de-

Increased fodder quality through ideal guide roller

The new Bergmann Royal loader wagon

sign as the large Bergmann loader wagons, allowing for full and partial tailgate opening on the Royal S.

To fully use the cargo space capacity of the Royal K models without dosing roller, the tailgate has the same height as the loader wagon's side walls as standard. There is no need, therefore, for additional optional tailgate extensions.

All Bergmann loader wagons are ISOBUS-equipped as standard and feature the CCI 800, CCI 1200 or other ISOBUS- and Agrirouter-compatible terminals for convenient transmission of machine, GPS and job data in ISO XML format to the desired end points via terminal and Agrirouter.

As a partner in the consortium, Bergmann has access to Agrirouter – a neutral, generic web-based platform for data exchange between machines and agricultural software of different makes.

With Agrirouter, the user can specify what data will be transmitted to various agricultural software systems, such as a Farm Management Information System (FMIS).

Good rainfall and high commodity prices have seen cropping farms report stronger financial performances in 2021-22, according to the Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES).

ABARES executive director Jared Greenville says cropping farms have reported higher than average cash incomes over the last year.

"It's been a boom year. At the national level, farm cash income for cropping farms is estimated to have increased by around 28 per cent to average \$619,000 per farm in 2021-22," he says.

"We can put this down to higher receipts from wheat, barley, oilseeds, and grain legumes.

"That said, prices are higher for farm inputs such

as fuel and fertiliser, and this has affected returns and will do so even more into 2022-23."

Livestock producers had also enjoyed a good year in 2021-22, he says, due to a combination of high commodity prices and good seasonal conditions.

"At the national level, average farm cash income for livestock farms is estimated to have increased by around 10 per cent in 2021-22 to average \$202,000 per farm."

"Looking beyond the averages, we see that broadacre sector performance is being driven by larger farms with the largest 10 per cent of broadacre farms producing around half of total output, while the smallest 50 per cent of farms produce around 10 per cent of total output."

ABARES is predicting a strong winter cropping season

Many of those broadacre farms are also set to perform well in the year ahead, with ABARES noting that favourable autumn planting conditions had got the season off to a strong start.

Greenville says this year's winter crop area is forecast to be only slightly lower than last year's record.

"Excellent seasonal conditions and high crop prices are expected to drive the national planting of winter crops to reach the second highest on record at 23.4 million hectares," he says.

"And our current prediction is for winter crop production in 2022-23 to be the fourth highest on record at 50.9 million tonnes.

While noting the high costs of fertilisers and chemicals have meant growers have needed to economise on their use, Greenville says the outlook remains positive.

"The total summer crop production in 2021-22 is also estimated to reach a new record of 5.5 million tonnes," he says.

"Well above average rainfall during autumn contributed to finishing off an excellent summer cropping season in Queensland and northern New South Wales.

"This incredible yield is despite the flooding in Queensland and northern New South Wales, which was mostly localised and didn't impact the national volumes," he says.

LIVESTOCK

Small wonder

Microscopic particles developed in a Queensland laboratory could be a new solution to flystrike, which has bedevilled Australian farmers for generations

A new nanotechnology method designed to protect sheep against flystrike has been developed by researchers at the University of Queensland (UQ).

Tiny nanoparticles, which measure less than a thousandth of a millimetre in size, could provide longer protection against flystrike and lice, countering the development of resistance to insecticides and reducing reliance on mulesing.

If successful, the nanotechnology could help to solve a problem which costs the Australian sheep

industry as much as \$173 million per year.

Developed by UQ researchers as part of a project also funded by the Queensland government and Australian Wool Innovation (AWI), the unique silica nanocapsule particles have whisker-like spikes purpose-built to prolong protection against flystrike.

The spike-covered particles would ultimately be a component in a dip or other topical treatment for the sheep, sticking either to the fleece or to the fly.

The project is headed by UQ's Dr Peter James,

<

The silica nanocapsule particles as they appear under a microscope

who says the new methods could provide longer protection against flystrike, adding that results have already looked promising.

"We've had very promising results during testing with the slow-release formulations giving extended periods of protection in comparison with more conventional formulations," he says.

Dr James says the results have indicated that a careful selection of active ingredient can ensure sheep are unharmed through minimal residues or off-target effects.

"Nano capsules offer new, labour-efficient options for managing flystrike and could also help counter the risk of blowflies developing resistance to treatment," he says.

"Historically, chemical pesticides have been delivered in relatively large doses to achieve extended protection, but in slow-release formulas doses can be smaller.

"By using nano capsules, the chemical can either be delivered at steady levels over a prolonged period or be designed to release only when needed."

Researchers at UQ have patented the silica nanoparticles which feature a hollow cavity and a porous silica shell.

Following the initial success, UQ hopes to move the research out of the laboratory to test the nanoparticles in the field.

The AWI has thus far welcomed the outcomes of the research. \mathbf{fm}

Herd Boss feeders will make their Australian debut at this year's AgQuip Field Days after importer Valton Feeding Solutions chose to expand its product offering with two new models described as "showstoppers".

Having already introduced the Herd Boss TMR mixer wagons into the local market, Valton has opted to add the 4815 and 2710 feeders to its range.

Herd Boss machines are manufactured in the United States and are owned by Post Equipment Company, with which Valton has a strong and ongoing relationship.

Post sales representative Joel Schelling is among the company representatives who will fly from the USA to Australia to give AgQuip visitors the rundown on the newest product to hit our shores.

"I'm very excited to have it in Australia and represent it in August, I'm really looking forward to that," he says.

"It's nice to put boots on the ground in that scenario, and it's new to Valton too so it's nice to be able to help them out and answer some of those questions they won't be as familiar with yet at that point.

"At the different trade shows or ag shows we've done in the States it's definitely a showstopper.

"It's new to the market, so it really catches the eye. It brings people into the booth, and it's been a fun product to sell."

The Herd Boss feeder is available in two models - the 4815, which has a capacity of 2.2 cubic metres (78 cubic feet) and the smaller 2710, which offers a 1.16 cubic metre capacity (41 cubic feet).

Aside from the capacity, the main difference between the two models is the smaller feeder has a lid.

This lets producers leave feed in the machine overnight, ensuring it stays dry and is protected from rain, Schelling says.

Producers buying the larger Herd Boss feeder were generally doing so for the extra capacity, Schelling adds, and his experience with American customers is that most do without the lid, instead using all the feed in one pass.

While also still a relatively new product in the United States, Schelling believes the success experienced in his homeland will translate to Australia due to many of the markets being similar.

"We've just seen really good results with them in the US in calf operations, sheep operations, even yards that are feeding buffalo," he says.

"With the number of sheep and cattle that are

in Australia, I feel there's going to be a demand for them.

"It fits a certain market and there's nothing there that has fulfilled that niche in the US currently, so it's been a great new product for us here."

Valton Feeding Solutions has already been importing Herd Boss TMR mixer wagons, which are a recent manufacturing addition by Post Equipment Company and were partially inspired by a conversation with Valton owner Tony Byron.

It was therefore a logical step to branch out into the feeders, Schelling says.

"In a nutshell, the biggest selling point of the feeders is they're versatile," he says.

"Tony is familiar with feed wagons, and the feeders are very similar to the TMR mixers.

"If you take the front discharge off a mixer and build a little box on it, that's pretty much what you have.

"If a person has a TMR and wants to fix up his ration and he has all the feed stuffs available but has cattle or sheep 30 to 40 miles down the road and wants to run feed over to them, this unit will allow them to do so without having to haul his wagon or tractor down the road.

"It fits on the back of a ute, as you call them in Australia."

Another big example of the Herd Boss' versatility is in the fact it can handle a wide variety of feeds. including hay, silage and plenty more.

This means producers are not restricted to a particular feed, which can lead to cost savings for the producer when using the Herd Boss.

"The only thing on the market currently is like a hopper box that winds down to a conveyor discharge system, like a screw conveyor," Schelling

"The issue with those is that you're really limited on what you feed. Those were built to accommodate the industry that's building all these manufactured beef pallets, beef cubes we call them here.

"We are seeing a big growth in by-products, whether it be ethanol, all the breweries and distilleries popping up all over - that's a product that they cannot really use, but it actually has a lot of beneficial nutrients for cattle, and it's probably about \$200 a tonne cheaper and it's very high in phosphorus.

"There's really nothing you can't feed with them so even if a producer does want to feed pellets, he still can with the Herd Boss feeder.

"It allows him the option if he has something else available though. There are people feeding cotton feed, gin trash, orange peels, peanut hulls, you name it. Whatever they have available in their area or whatever their area can grow, they can feed it through this machine."

AgQuip Field Days will be the Australian debut of the Herd Boss feeders and will not only provide farmers with the chance to see the machine in person, but a unique opportunity to speak directly to Schelling and the American-based manufacturers.

He is excited about the opportunity to head Down Under and showcase the feeders, which he believes will be a winner for Tony and the Valton Feeding Solutions team.

"From what we've seen here in the States. I think it's going to be a good product in Australia and even New Zealand and I think there's going to be quite a few sales of them.," he says.

"It's definitely a case that you get one sold, you get it out there and that's when the producers start

"Once you go through the benefits with them, the cost saving and the wider range of what it's able to feed, then you start getting comments like 'where's

this thing been? We could have used this ten years

Valton Feeding Solutions is a family-owned business based in the western Victorian town of Mortlake, which specialises in feeding and hay grinding equipment.

It is the importer and distributor of Mighty Giant and Herd Boss products and can supply and service products nationwide.

Their full range can be viewed at www.valtonfeedingsolutions.com.au. Tony Byron can be contacted on 0458 425 485.

Meat processor CirPro Australia, formerly known as Pirie Meats, has become the first company to buy a methane-reducing cattle feed supplement on a commercial basis.

Produced by CH4 Global, the supplement contains Asparagopsis, which has been proven to reduce enteric methane emissions in cattle by up to 90 per cent, when it is grown and processed to exacting standards.

CirPro will roll out the supplement across its feedlot partners in what both parties say is a long-term multi-million-dollar commitment with an option for expansion. CirPro chief executive Roger Smyth says his company is excited about the partnership.

"This marks an important milestone towards the goal of a carbon-neutral beef industry in Australia by systemically reducing, not just offsetting, emissions," he says.

"It represents a win for the beef industry, a win for Australia, and a win for the planet."

Cassandra Kelly, Senior Advisor to FutureFeed, the holder of the patent on Asparagopsis methane-reduction efficacy claims, has added her congratulations, saying CH4 was one of the first companies to recognise the potential of the supplement.

<

A sample of the Asparagopsis seaweed.

"Just a few years ago, Asparagopsis was a largely unknown seaweed that was not cultivated in commercial quantities and had very few applications outside of niche cosmetics and as a condiment in Hawaii," she says.

"Now we are seeing a new industry with the capability to support local communities and the creation of jobs whilst working together to make a meaningful impact on methane emissions from livestock."

FutureFeed has further issued licenses to Australian seaweed growers CH4 Global, Sea Forest and SeaStock, to enable them to supply of Asparagopsis to the livestock market.

"It's both inspiring and humbling to reflect on how the industry has managed to engage the brains trust, community and investment support in just under four years to make a product launch like this a reality." Kelly says.

CH4 Global founder Steve Meller says the company is aiming for rapid commercial growth across Australia, New Zealand and the United States in 2023 and 2024.

"Scaling exponentially through our growing partner network makes this agreement the tip of an iceberg that will be more fully realized in the next few years," he says.

"A key aspect of this global partnership network is our core principle of working with local and indigenous communities for seaweed growing partnerships."

That said, Meller adds that "No one-off product innovator will be capable of bending the climate curve any time soon."

Sales of agricultural tractors in May were up by 12 per cent on the same month last year and are now 6 per cent behind for the 2022 year to date.

This strong result is largely due to more larger tractor deliveries following several months of poor supply - which remains an ongoing challenge for dealers.

The prevailing theme in the market appears to be if you have the stock, you will get the sale and this is testing customers' brand loyalty more now than at any time in recent memory, particularly with small to mid-range tractors.

Here in Australia, customers have extremely supportive markets for their products and with the support of the Temporary Full Expensing Program (set to run until June 2023) are taking the opportunity to renew their fleets.

As we reported last month, price rises are continuing and many of these appear to be baked in, most notably relating to shipping costs, though more

stringent regulations (not just environmental) are also leading to cost increases that are having to be passed on.

Looking at sales across the nation, results were strong across the board with New South Wales sales up 10 per cent following a few down months to be now 9 per cent behind last year.

Queensland was up 16 per cent to be now 3 per cent ahead year to date and Victoria was 14 per cent

Gary Northover is executive director of the Tractor & Machinery Association of Australia (TMA). He can be contacted on (O3) 9813 8011 or at gary@tma.asn.au

4

Prices are rising as the demand for agricultural machinery remains strong worldwide

up on last May, due mainly to supply of small horsepower units, and is now in line with last year.

Sales in Western Australia recorded a huge lift with the arrival of large hp machines, up 26 per cent for the month but still 18 per cent off YTD.

South Australia dropped 14 per cent. Tasmania was up by 17 per cent while sales into the Northern Territory were up 89 per cent.

Looking at the performance reporting categories, the small under 40hp (30kw) category was strongly up 14 per cent to be 1 per cent ahead YTD.

The 40 to 100hp (30-75kw) range was up 11 per cent in the month to remain 4 per cent ahead YTD and the 100 to 200hp (75-150kw) category was up for the first month in some time, 6 per cent ahead in May to be 10 per cent behind YTD.

The large 200hp (150kw) plus range was the standout this month after suffering from a lack of supply. It was 27 per cent ahead of the same month last year with more opportunity ahead, still being 25 per cent off YTD.

Combine harvester sales have now started to occur and there is every expectation of exceeding 1,000 again this year as the renewal of fleets depleted by the drought continues.

The outlook for balers remains subdued as the hay season is yet to get going. It was down in May again and now down 20 per cent compared with last year, and sales of out-front mowers finished down again by 24 per cent.

The 2022 TMA Conference is being held on Wednesday July 20th at the Hyatt Essendon Fields in Melbourne. Tickets are now on sale and can be found on the TMA Website www.tma.asn.au

AG-PRIDE Quality Rotary Cutters

10 models 1.2m - 4.5m working widths

MS Series - Medium Duty

- 1.2, 1.5, 1.8m working widths
- Pressed galvanised reinforced decks
- Stump jumper blade base
- Rear wheel puncture proof tyre
- Floating headstock
- Round back reduces windrows
- Safety clutch in driveshaft

HS Series - Heavy Duty

- 1.5, 1.8, 2.1m working widths
- Reinforced galvanised cutter deck
- Front & rear safety chains
- 4 Plate safety clutch
- Rear wheel puncture proof tyre
- Stump jumper blade base
- Pressed reinforced deck

HS Twin Rotor - Heavy Duty

- 2.4 + 3.0m working widths
- Reinforced galvanised cutter deck
- Twin rear wheels
- Puncture proof tyre
- Front & rear safety chains
- Stump jumper blade base
- Pressed reinforced deck

Folding Wing - Medium Duty

- 3.6 + 4.5m working widths
- Reinforced galvanised decks
- Deep cutting chamber
- Safety clutches on the drive shafts
- Easy height adjustment
- High blade tip speed
- Stump jumper blade base
- Front & rear safety chains

he annual FarmFest Field Days returned in 2022 as many of the country's top agricultural machinery manufacturers and distributors descended on Toowoomba to show off the most exciting pieces of equipment, machinery

and attachments. Our journalist Anthony Wingard was there to check out some of the highlights.

Portable Conveyor - Valton Feeding Solutions

Manufactured by the team at C&C Conveyors in Warrnambool, Victoria, the portable conveyor is Australian made and is distributed through Valton Feeding Solutions.

The portable conveyor is available in four different sizes, ranging from three metres, with widths of either 300mm or 450mm, through to a 5.4m model, which boasts a width of 450mm.

The conveyor is designed for tight access areas and, weighing in at just 72kg for the smallest model, is easily manoeuvrable - meaning feed can be delivered where required with ease.

Typically, the mobile conveyor will require between two to four people to move, however a wheeled option is also available for single person mobility.

From a design perspective, the conveyor features a double acting hydraulic hand pump and can reach multiple feed out heights. C&C Conveyors has manufactured the machine using a heavy-duty galvanised frame to increase its durability and performance while in action.

Operators have the option of three drive motors, including a three-phase 415v electric, single phase 240v electric, and hydraulic with quick couple hoses. A wide range of gearbox ratios are also available to suit individual needs.

For operators wanting more from their conveyors, a range of optional accessories are also available including extra height side extensions, a folding wheel set, adjustable height stands, and removeable loading hopper.

8 & 9.5m Rubin 12 Disc Harrow - Lemken

Lemken has expanded its range of Rubin 12 Disc Harrows with the addition of an eight and 9.5m wide $version. \, Lemken\, already\, offers\, the\, Rubin\, 12\, from\,$ three to seven metres in width.

The larger models have the same design as the smaller iterations but are capable of working across a wider area and require more hauling capabilities to tow the disc harrow.

Every function of the Rubin 12-disc harrows is controlled from inside the cab of a tractor including its hydraulic fold, depth, draw bar and wheels.

The symmetrically arranged discs feature independent breakaway suspension on each disc. which enables them to work without lateral pull even at high driving speeds.

AlphaCut flexwing slasher - AusCut

Owned and operated by the Larsen family, AusCut has been manufacturing since late 2019, delivering a range of slasher models as well as a series of turf mowers. In the AlphaCut, AusCut has designed a heavy-duty slasher ideal for all slashing and mulching applications.

The slasher can cut at heights of between 40-400mm and its rigid blade system allows for the mulching of large material with ease. A safer design protects the operator and bystanders to avoid workplace accidents.

With simple height adjustment controls, the AlphaCut is easy to control, while its height deck clearance allows for an even distribution of mulch. Further mulching options, which add residues into mulch to increase biodiversity in soils, are available.

Weed-It Kits - Croplands

Farmers can have more control over their spraying applications using Croplands' Weed-It optical shot spraying kits. The system makes use of advanced sensors to detect chlorophyll in growing weeds before targeting them with accurate spraying.

The system saves on both water and time, while also protecting soil moisture and eliminating weeds from fallow fields. Croplands says the system also reduces herbicide use, while further benefitting the field and maximising the return on investment.

Weed-It is powered by a 48-volt system which draws far less current than other weed detection equipment, meaning it produces far less strain on the tractor's electrical system.

Hercules H1250 wheel loader - Brisbane Mini **Excavators**

Fresh from gracing the cover a recent edition of Earthmovers and Excavators, the Hercules H1250 wheel loader imported by the team at Brisbane Mini Excavators was a definite crowd-pleaser.

The H1250 is powered by a 180 horsepower (134kW) Cummins diesel engine and is the largest loader in Brisbane Mini Excavators' wheel loader range. A load capacity of four tonnes further proves the machine's pedigree.

The H1250 can work across a range of sectors, including construction, general earthmoving and even agricultural applications, where it has shown its ability as a jack-of-all-trades loader.

Other features of the H1250 include an extra-large colour reversing camera and a cabin that is 15 per cent larger than the standard size for a loader in its class.

Events

Big Tyre's impressive range

Queensland-based Big Tyre has been manufacturing and distributing a range of rubber and polyurethane products since 1954, used for both earthmoving and agricultural applications.

Big Tyre boasts some of the biggest tyre brands in the world including Bridgestone, Firestone and Michelin. The range includes tractor tyres and tracks for major manufactures such as John Deere, Case IH and Caterpillar.

The company also sells a range of agricultural rubber tracks and undercarriage wheels as the Australasian distributor of Continental's rubber tracks for machinery. The reconditioning of tracks is also available and Big Tyre says it has reconditioned over 900 tracks since developing the process in 1997.

TT3.50 Tractor - New Holland

Making its debut at FarmFest, the TT3.50 is a compact machine with a smart design and has been crafted specifically for the Australian market, New Holland says.

The new model delivers 50 horsepower with further improvements made in terms of operator comfort, performance and versatility.

A three-cylinder diesel engine produces a larger displacement and greater power to complete more $demanding\,tasks\,with\,the\,TT3.50.$

Quick cycle times can also be achieved thanks to a mechanical PTO and the high-capacity hydraulics mean operating the loader at the front of the tractor is also reliable and precise.

New Holland has redesigned the seat features to include integrated suspension for ultimate comfort. Flip-up arm rests and changes to the position of key controls for improved ergonomic operations,

are other considerations made for better operator comfort.

The TT3.50 is available in both two and fourwheel drive versions, each with 8x8 shuttle transmissions.

Pro-Belt Round Baler - New Holland

New Holland's new Pro-Belt round baler was unveiled in March this year, making FarmFest one of the first times the machine could be on show to the public.

New Holland re-designed the machine from the ground up with a heavier, stronger frame, as well as a larger 520mm rotor, which means bales are packed with more hay.

The baler performs equally well in silage and dry straw for easy handling and stacking and can produce up to 30 tonnes of bales per hour, packing in 140kg per cubic metre in straw.

Variable chambers are available in either a 165cm or a 190cm maximum bale size configuration, both in a rotor feeder version and a 25-knife rotor cutter version.

FL933 Wheel Loader - Olympus Loaders

With a long wheelbase and large breakout and traction force, the FL933 articulated wheel loader is a reliable option for a range of earthmoving requirements. Making up part of the Farm Master Series at Olympus Loaders, the FL933 excels as a versatile machine.

A newly-designed electrical system and upgrades made to the hydraulic system result in the FL933 boasting a load capacity of 3.3 tonnes in its 1.5 cubic metre bucket. The loader is powered by a 130 horsepower (92kW) Cummins or Deutz engine.

An auxiliary hydraulic function makes the FL933 a multi-purpose handling tool with the machine able to change quickly between attachments, from buckets to pallet forks, as well as a range of hydraulic attachments.

John Deere X9 1000 Combine Harvester - RDO **Equipment**

John Deere's latest combine harvester offering touched down in Australia toward the end of last year and has continued to make waves as more units continue to arrive. The X Series is the manufacturer's largest harvester model to date, and while the X9 1000 is the smaller of the two models in the series, it still delivers in the field.

The X91000 boasts one per cent more horsepower than the largest model in John Deere's S Series, the S790, which predated the X Series, yet the X9 1000 delivers more capacity than the S790.

An all-new cab has also been designed by John Deere on the X91000 which includes seats with massage, heating and cooling functions, increased 360-degree visibility and a 6.5-inch (16.5cm) touchscreen display.

Bossini Slurry Spreader B4 350 - Oz Value Ag

The Italian-made Bossini slurry spreader was purchased by Oz Value Ag's Queensland state manager, Carl Rackemann, after he and his business partners found themselves in the hunt for an economical and efficient alternative to other slurry practices in Australia.

After a visit to Agritechnica - the world's largest agricultural machinery trade show - Rackemann decided on this Bossini slurry spreader.

The Bossini spreader differs from other machines used in Australia given it spreads slurry into the ground in line with many European farming laws.

The machine is a four-axle spreader with a tank capacity of between 30,000 and 35,000 litres. Despite its larger appearance, the spreader is quite narrow meaning it can fit in-between rows and manure can be injected behind and beside it.

DUO Mk6 muck spreader - Eastern Spreaders

This English-made muck spreader has been crafted with heavy-duty materials to withstand the most demanding of conditions.

A new easy out design is tapered with steeper sides to prevent bridging of bulky materials, while also maximising the Mk6's capacity, which ranges between 11 to 14 tonnes.

The rear discharge muck spreaders shred and spread manure via two 900mm diameter twin vertical beaters. An unrestricted flow from the body into the beaters is also achieved thanks to the Mk6's over-width beater set, which boats an internal width of 1700mm.

When spreading light material, the Mk6 can also deliver improved performance with its 1050mm lower spinners.

Optional equipment includes a slurry door, wooden or steel extension sides, weight cell system, 1000 rpm rotor gearbox and front marker lights among others.

Farmall JXM 55 and 65 - Case IH

Case IH debuted the new JXM 55 and 66 models at FarmFest as the manufacturer continues to expand its range of Farmall JXM tractors.

The JXM Product line had a 75 and 90 horsepower option when it launched Down Under in 2018. The two new models extend the line-up to four options today.

The JXM 55 and 66 models are designed for the hobby farmer and leisure market, as well as any farmers who are in need of a low horsepower utility tractor that is durable and reliable in the

The machines are powered by a turbocharged 2.9L engine while operators will have the choice between a 12x12 mechanical synchromesh transmission or a 20x20 synchromesh transmission with creeper.

Other features of the Farmall JXM 55 and 65 tractors include a three-point hitch, comprehensive instrument panel and a large 60L fuel tank.

Performer 5000 cultivator - Kuhn

Delivering high performance in only one passage, the performer 5000 deep tine-disc cultivator from Kuhn is a versatile machine which can be adapted according to specific requirements.

With two rows of discs amounting to 38 in total, the performer cultivator can work across a range of different soils and applications at any time during the agricultural cycle.

The double row or discs cuts and mixes straw into surface soil and feature a 520mm diameter, slight curved profile and notches, perform reliable stubble cultivation.

The discs also feature a width of 6mm to ensure longevity and are equipped with bolt hubs and are lubricated for life to further reduce maintenance over the lifetime of the machine.

Here are upcoming field day and agricultural events for 2022. Information was current as of going to press

Katherine Show And Rodeo - Katherine

The biggest community event in the region, the Katherine Show is a must for all. There are showrides, a rodeo and equestrian events as well as poultry entries, a chook auction, cattle show and pets. When: July 15-16, 2022 More info: katherineshow.org.au

Australian Sheep & Wool Show - Bendigo

The Australian Sheep and Wool Show is your one stop shop for all things sheep. More than 2,700 sheep and 30,000 people assemble in Bendigo for three days in July for the largest show of its type in the world. When: July 15-17, 2022 More info: sheepshow.com

Royal Darwin Show - Darwin

With the aim of promoting, encouraging and assisting the development of primary industry, commercial, cultural activities, mining and industrial resources of the Northern Territory, the Royal Darwin Show has livestock, a horticultural pavilion, food, entertainment and a carnival. When: July 21-23, 2022

More info: darwinshow.com.au

Sheep Connect - Hamilton

Sheepvention Rural Expo has a sheep show and ram sales, an innovations hub, ag competitions, trade exhibits and other entertainment and produce. When: July 31-August 2, 2022

More info: www.hamiltonshowgrounds.com.au

Mallee Machinery Field Days - Speed

Mallee Machinery Field Days brings together more than 8,500 visitors, and 350 exhibitors, with an estimated \$100,000,000 worth of equipment and machinery on site.

When: August 3-4, 2022 More info: mmfd.com.au

Nyngan Ag Expo - Nyngan

The Nyngan Ag Expo will see over 300 exhibitors display their products and services ranging from farm machinery, livestock and motor vehicles to lifestyle, fashion, art, craft, emergency services, schools and children's amusements. See demonstrations on farming conservation, farm safety and much more then afterwards, relax and enjoy the hospitality, in the Aussie Country Catering Food & Wine Extravaganza marquee. When: August 6, 2022

More info: www.facebook.com/nynganagexpo

AgQuip Field Days - Gunnedah

Arguably one of the biggest field days on the Australian calendar, AgQuip has been supporting the agriculture world from its permanent, purpose-built site just outside of Gunnedah, NSW since 1973. Attracting more than 100,000 visitors each year and showcasing over 3,000 products, AgQuip has proven to be a much-anticipated event for both exhibitors and attendees alike.

When: August 16-18,2022

More info: acmruralevents.com.au/agquip/home

For the full year's calendar of events: tradefarmmachinery.com.au/events

Voice of experience

The Whykes family is stepping into the future with their Weed-It RoGator, sticking with a model they know well

Three generations of the Whykes family work their 4,700 hectare dryland farm west of Charlton in Victoria's Mallee region. They produce barley, wheat, canola, lentils, peas, fava beans, lupins and vetch and oaten hay.

Because they sow their crops using direct drill or minimum tillage, they depend on agrichemicals to control weeds. They use their sprayer to apply a full range of crop protection - herbicides, insecticides and fungicides.

Peter Whykes and his son Chris are the primary sprayer operators on the family's cropping farm, and they are mastering a new RoGator 1300C with Weed-It spot spray technology.

In April this year, the family took ownership of their second self-propelled RoGator, which is equipped with dual spraying technology. It can do traditional blanket spraying or use its Weed-It Quadro sensors to target individual weeds.

Peter says he and his sons were impressed with their previous 6000L self-propelled RoGator 1300B, so they were keen to upgrade it for the new 7000L RoGator 1300C.

"We bought the first RoGator in this area," Peter

"It is a great machine with a strong boom. We ordered the new one with Weed-It sensors because we want to reduce our chemical usage.

"There are two big benefits to using less chemicals. One is that it is better for the environment and our soils, and the second is we will save money and

The Whykes family was hoping the new sprayer would arrive as scheduled at the beginning of the year because they planned to use its spot spraying capability during late summer and early autumn.

As it turned out, it did not arrive until April. Although it was late, it did arrive in time for them to see how effective it is and both Peter and his son Jon are impressed.

"The sensors need to be able to distinguish the green weeds against brown soil, so we will mainly use spot spraying to apply glyphosate and paraquat during the summer fallow prior to sowing," Peter says.

"It seems to be very accurate and it has done a

good job. We were able to target weeds with the sensors while operating at 17 or 18km/h."

Jon estimates the Weed-It spot spraying technology will reduce their chemical use during summer and autumn by between 50 and 80 per cent.

"We would have saved \$100,000 if we had used the Weed-It over the whole summer. We did one job for a neighbour on contract and we used 30 per cent of the amount of chemical we anticipated to do the job," Jon says.

During blanket spraying, Peter says it is easy to prime the boom. An agitator in the tank works continuously and the product is continuously pumped through the boom so there is not a delay when spraying starts.

The RoGator 1300C is also very easy to calibrate and has impressive section control, both of which come down to Capstan Pulse Width Modulation (PWM) technology. PWM regulates the application rate independent of pressure and it gives the ability to control every nozzle individually.

Chris, Peter and Jon Whykes with their new RoGator 1300C, supplied by Croplands

With Capstan PWM, 50hz solenoids mean nozzles constantly switch on and off up to 50 times per second. This means the operator can alter the amount of time a nozzle cycles, making it possible to vary application rates while keeping the pressure constant.

"Using the previous system, if you wanted to increase the spray rate, the pump sped up and that increased the pressure so a bigger volume of chemical went out. The problem with that is it can encourage spray drift through fine droplets as the pressure increased," Jon says.

"With this system, you put in the preselected application rate and pressure. As the speed of the sprayer varies, the pulsing rate of the nozzles adjusts to maintain the rate and the pressure. You know that 99 per cent of the droplets are the right size to hit the

Jon says this system also gives full individual nozzle control. This includes turn compensation so that during turns, each nozzle applies the exact rate required to make coverage consistent across the

Individual nozzles also turn off if they are approaching an area that has already been sprayed. Section control in the Whykes' previous RoGator deactivated and activated a cluster of nozzles.

This meant a number of nozzles would turn on together, even if only one in the cluster was over an area that had been not been sprayed. This could lead to over spraying and the extra costs and potential crop damage it can cause.

"Another big step up with our new RoGator is the auto fold function for the boom," Jon says.

"With this one, there is just a single button that you push to fold out or in."

"The new RoGator also has two auto cruise controls. You select the work speed and the turning speed and then you can just switch between them."

With its ability to reduce drift and spot spray, the new RoGator with Weed-It is helping the Whykes family keep up with the very latest in technology and stay ahead of the regulators.

They believe that in the future all farmers and contractors will have to be able to show that they are only using the chemicals they need to use, and that they are only applying them where they need to go.

Great minds

Technologies developed by ifm efector were a perfect match for the team at Goldacres when developing its showpiece G-Hub system

As technology in farm machinery grows and evolves, the 'brains' inside this equipment requires human minds in the development process to make it all possible.

For Victorian sprayer manufacturer Goldacres, it was the simple and intuitive nature of ifm efector's systems which made them the supplier of choice for the 'brains' inside its showpiece G-Hub system.

The relationship between the two companies dates back about four years when ifm's Ronel Lal contacted Goldacres at the same time the manufacturer was looking at a control system for its G6 sprayer.

Goldacres was so happy with the final design and integration of the ifm control system that they chose ifm again for the newly released Prairie Pro Series $2 \, \text{sprayers}$ and plans to also use ifm's systems in its next rollout of the G-Hub.

"It's basically a full dashboard of everything that's going on with the sprayer," Goldacres sales manager Stephen Richards says.

"They are quick and trouble free as well, very reliable.

"Finding faults quickly and easily is a big plus with the ifm control system because it is so intuitive and easy to use. It's a simple system but it works really well.

"It's really user friendly and tells the customer everything they need to know about what's going on with their sprayer."

The control system keeps the operator fully informed about the machine's current operating status and condition, ifm says, and it also flags issues immediately to pinpoint and troubleshoot on the spot instead of having to contact the dealer to arrange a technician to visit their farm, often located some distance away.

ifm efector, a company with more than 50 years of history in design and development of sensing and systems technologies and whose global headquar-

ters is in Germany, has a strong Australian footprint with a national head office in Melbourne and offices in every Australian state.

It manufactures a range of technical products which can be used on farms and many farmers may already be using products designed and manufactured by ifm without realising it.

One example is the O3M Smart Sensor (three dimensional imaging sensor), which provides a precision guidance system for tractors, while the company's newest product - the Agri-Mate - allows ISOBUS-compatible tractors and implements to be linked without costly and time-consuming manufacturer development.

By providing a custom solution for Goldacres' G-Hub control, ifm was able to implement several custom features based on what was requested.

One of these is the ability to fill the sprayer by simply pushing a button, rather than turning on taps, aided by an auto-shutoff mode.

There is also a touch screen in the G-Hub which has an image of the sprayer's joystick and allows the user to override the joystick in case of an error with one of the buttons.

A host of vital sprayer data is also available to customers through the ifm-designed screens, Richards savs.

"It doesn't replace the sprayer rate controller, but it shows everyone what's going on so you see the tank volume, how much is in the rinse water tank, you can turn your rapid flow on, your agitator on and it has a reversing camera built into it," he says.

A golden match

Reflecting on the company's relationship with Goldacres, Lal - a sales engineer with ifm - says the traits which stood out to the sprayer manufacturer remain at the forefront of ifm's philosophy.

"The requirement was for a state of art technology with the HMI (human machine interface) in a

A

Goldacres are using ifm's control systems in the G-Hub

B

The G-hub external interface, as designed by ifm

C

ifm's control systems and screens give farmers access to a wealth of information

controller and a system from a proven supplier," Lal says.

"From a quality standpoint, it's a system that you can rely on and is rated for rugged and harsh environments.

"We have a good track record with after sales support as well, so it's not about just selling parts to a customer and walking away.

"I got invited to the site to have a look and prepare a proposal on what was being requested, and from there I involved our Australian technical team for the design and implementation.

"The winner really was the HMI, which was brand new back then.

"That was what stood us apart from the competitors, and it still does. It's been a win-win."

Describing the relationship between ifm and Goldacres as a win-win seems fitting.

For Goldacres, it has provided them with high-quality control systems for its machines which tick all the boxes for its requirements.

According to Lal, the benefits for ifm have been numerous.

"The advantages we have seen is our increased exposure in the agricultural industry, because Goldacres are known nationally as a premium manufacturer of agricultural sprayers," he says.

"That's really given us a boost or thumbs up with other potential customers and people know us and respect us more.

"When we worked with Goldacres, it was good that they had very competent engineers and programmers and they gave us some really good feedback.

"Back then our HMI was quite new, so Goldacres really pushed the screen to its performance level that they required, and for us it was good to have that collaboration early on as well."

John Deere precision agriculture product manager Benji Blevin says that establishing good boundaries is vital for precision farming

In an emerging autonomous landscape, the post and wire fences that used to define a farm's boundaries are being replaced by digital 'geofences', and it is critical to ensure that these important pieces of precision agriculture infrastructure are accurately measured.

John Deere demonstrated its first fully autonomous 8R tractor in the US in January, and boundaries are the critical digital infrastructure required to guide it. Paired with guidance lines, these virtual geofences enable the machine to plot its path through an entire field.

Australian farmers are already using much of the technology on the autonomous 8R - AutoTrac Turn Automation, Boundary Track Guidance and Section Control - and this all requires accurate boundaries to function.

In short, the word 'boundaries' refers to a digital map of each of the fields that make up a farm. In addition to automating machine functions, boundaries enable farm data to be accurately captured, stored, and automatically transferred to farm management platforms such as John Deere Operations Center.

The question is, are the boundaries you have in place good enough today and will they guide an autonomous tractor in the future?

In my experience, the first thing a grower wants to do with a new tractor is put it to work in the field. Boundaries are usually only considered after data has been collected and farmers have to make sense of it. But data that isn't associated with a boundary has little or no value. And it's becoming increasingly clear that without accurate boundaries, we cannot have fully autonomous farming equipment.

Finding the right method to measure

There are various ways of measuring digital boundaries, each with their own level of accuracy that needs to be considered when you are looking to implement any form of machine automation. The simplest but least precise way to create boundaries for a farm operation is by drawing them on a map on a computer. Alternatively, an agronomist or another third party may already have boundaries electronically mapped, and it is just a matter of uploading these into Operations Center.

But these methods are only sufficient for data collection, management and analysis, and are not recommended when using machine functions such as turn automation or section control.

Investing the time to establish long-term, repeatable boundaries is the best way to prepare your operation and reap the rewards from the remarkable advancements in data and automation that are already emerging.

The most accurate method of creating digital boundaries requires the farmer to physically drive along the edge of their field with a GPS receiver on board that has a Real-Time Kinematic (RTK) correction signal enabled. RTK ensures long-term repeatable accuracy within 2.5 centimetres. John Deere displays have built-in functionality to guide you through the process of driving and recording boundaries, or you can contact your local dealer, who may offer RTK boundary mapping as a service.

Boundaries can also be created by using previously recorded coverage. A seeding operation is generally the most accurate source for creating a boundary as most farmers generally seed all the available hectares. If RTK accuracy was used during seeding, this method of boundary creation can then be used for data collection and management as well as machine automation.

Build profitability, map opportunity

Accurate digital field boundaries are the foundation on which increased business efficiency and profitability can be built, by enabling farmers to

The fully autonomous John Deere 8R was demonstrated in the US in January. Inset: John Deere Australia and New Zealand Precision Agriculture Manager, Benji Blevin

make better decisions. Not many of us have the time to sit down and analyse all the available map layers for each field individually, but a farm management platform like the Operations Center can highlight where the greatest opportunities may exist.

Boundaries can be thought of as a digital folder that automatically stores all relevant data in one place, making it easier to understand trends and derive insights. For example, by looking at historical yield data and pairing this with other available data such as soil types, growers can better understand the variabilities that are affecting crop growth. Management decisions become clearer, leading to improved outcomes such as reduced inputs or increased crop yield or quality.

Boundaries also represent an opportunity for growers to differentiate their business. We have a supply chain and consumers who are seeking produce from sustainable sources. It is a simple process to automatically record every operation or pass that occurs on every field, unlocking the ability to easily demonstrate sustainable farm practices and environmental stewardship without the need for manual record keeping.

In the same way as a good set of fences kept livestock contained and protect crops, properly defined digital boundaries are pivotal to capturing the benefits of autonomous farming.

Far from easing slowly out of the COVID-19 pandemic, sprayer manufacturer Goldacres has been busy adding new machines, updating others and making its mark in the precision agriculture space

The company's recent highlights include the introduction of its targeted spraying solution Weedetect, ongoing rollout of its new Prairie Pro Series 2 sprayer, and an upcoming refresh to its G4 sprayer.

Weedetect, which is designed for targeted green-on-green spraying, entered the market late last year after two years of work behind the scenes to build a database of weeds for the system.

It represented a big leap into this area for Goldacres and was the result of painstaking work to ensure the system was ready.

"The idea behind it works really well but it has to learn all these algorithms and to get enough information into the system to make it all work, you have to go through a whole life cycle of a crop and the weeds in the crop and get photos from every

different angle," Goldacres marketing manager Stephen Richards said during last year's rollout.

"Different states and different countries have different weeds so we've had to teach the system about weeds grown in each area.

"It just takes time to get all the data to make the system accurate because you've really only got the growing season to do it."

Weedetect is available as an option on Goldacres' G6 Crop Cruiser and G8 Super Cruiser sprayers.

It involves 12 cameras being positioned three metres apart, with 10 on the boom and one on either side of the front of the chassis.

These cameras are constantly looking 4m ahead, and an angled LED light can be fitted below each camera to allow for spraying at night or in poor light.

Goldacres has also been testing its new Prairie Pro Series 2 sprayers, which is a redesign of the manufacturer's flagship model that has existed since 2015.

The Prairie Pro Series 2 is available in four sizes,

ranging from 5,000L with a 24m boom up to the 10,000L with a 48m boom, which will be the largest trailed sprayer Goldacres has ever produced.

Richards says the revamp, which was based on customer feedback, was a timely addition.

"With farming practices changing in a direction that requires higher accuracy, less wastage and getting more done, a rethink of the range was required," he says.

"The philosophy behind the new model was to create a trailing sprayer that shared the same filling and application technology from the recently released Crop Cruiser G6 Series 2.

"It's easier to use, has electric controls for all functions with full diagnostics info if something goes wrong, and offers all the functions and smarts of the self-propelled sprayer in a trailer."

Goldacres also plans to give its G4 sprayer a "birthday" later this year, with revisions including a new cabin and the addition of the G-Hub control system which exists on other models such as the new Prairie Pro.

All things considered

A series of weather stations and moisture probes are providing vital information to a group of farmers in north western Victoria

Farmers in and around Nhill in north western Victoria are making the most of new information from new soil moisture probes and weather stations set up across the region.

For members of the Woorak Community and Land Management Group, managing the large variations in the area's traditional seasonal conditions had long been a challenge.

The challenge was exacerbated by the lack of available localised data - with members instead relying on weather and rainfall data from either

Nhill, Rainbow or Warracknabeal, towns that often did not represent the conditions on the ground.

But the situation improved after the group applied for the pilot round of the Producer Technology Uptake Program run by AgriFutures in 2021.

Through a co-contribution model with producer members in the area, the group embarked on a project to install and trial soil moisture probes and weather stations over a 30km radius of their meeting hall.

The data from these trials is collated into a dash-

One of the weather stations installed under the Producer Technology Uptake program

board and shared with contributing members of the community group, demonstrating the benefits of this type of data for improved decision making.

So far, group members have used wind speed, direction and delta T data to ensure they get better results from spraying, and a tailored map is being developed to show real time fire ratings during harvest season.

As more data is collected, the incorporation of local soil moisture into Water Use Efficiency calculators will be possible for input adjustments to close yield gaps, optimising sowing and nutrition decisions based on soil moisture.

Woorak Community and Land Management Group member Matt Rohde, who first applied for the funding, says knowing what conditions will be like in the areas where they work has positively influenced their decision-making.

"Having the knowledge and data has not only impacted our farming operations, but more importantly has improved the safety conditions of the work we are carrying out," he says.

Rohde adds that a number of local growers who were not directly involved in the initial trial set up have now made the decision to take part.

"The initial funding has set us up with five weather stations and nine soil moisture probes which have been co-funded by the members putting them on their properties," Rohde says.

"Within 12 months of operating we now have 17 weather stations and 25 moisture probes installed across the district, with another two stations recently approved for installation.

"This has resulted in a massive data set that is directly benefiting our member group."

Group members have now invested an additional \$120,000 into the technology, with Rohde saying that being able to access the full data network when installing their own site had helped uptake of the project.

"This provides members with so much more value for decision making than installing a single site independently," he says.

Producer technology program manager Ulicia Raufers says this is the type of outcome AgriFutures hopes to see - helping producers identify where operational improvements can be made.

"The grants really provide the opportunity for the producer groups to identify their existing barriers to adopting these types of technology, in this case understanding the value proposition, and then design a project to overcome this, like this try, test and learn model," she says.

The Producer Technology Uptake program has recently closed Round 3 and has approximately 600 producers directly participating, and more than 2,500 producers indirectly involved through extension outcomes.

Light work

LED lighting will be available on the 2023 model John Deere 400 and 600 Series Sprayers, making precision spraying a possibility after the sun goes down

John Deere sprayer customers are set for a huge boost, with night-time spraying now possible thanks to LED lighting being made available for use on the manufacturer's See & Spray Select technology.

Deere's decision to add the LED lighting to its MY23 400 and 600 Series Sprayers means customers can now extend their targeted spraying window beyond the harsh heat of the day.

See & Spray Select is the manufacturer's targeted spraying technology, which has integrated cameras to detect green plants in fallow ground and therefore spray only these areas.

Since its launch in March 2021, Deere says the technology has resulted in farmers using an average of 77 per cent less herbicide while delivering similar hit rates to traditional spraying.

The manufacturer's Australian and New Zealand production systems manager Ben Kelly says the changes were prompted by a desire to meet farmers' needs and extend their spraying window into the night.

"We understand the summer fallow spraying window is limited by the heat during the day in Australia's harsh conditions, so it was essential we

Night-time spot spraying will be possible lusing the new models

John Deere's See & Spray technology was launched in 2021, but has previously only worked during the day

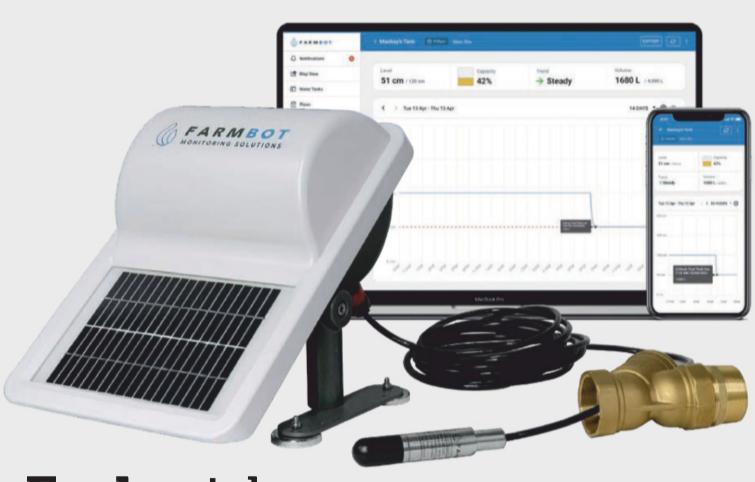

offered night-time spot spraying for our farmers to complete spraying as efficiently, safely and sustainably as possible," he says.

"Local farmers have reported up to 90 per cent chemical savings by using See & Spray Select, so providing the technology for farmers to be able to achieve targeted spraying during the night hours will bring enormous benefits to their bottom line, while helping them to tackle critical issues like herbicide resistance."

Deere's 400 and 600 Series sprayers allow farmers to switch between targeted spraying and wider broadcast spraying without leaving the cabin, and both modes can also be used at the same time.

The See & Spray Select technology will also now be available on all boom sizes.

The MY23 400 and 600 Series Sprayers, which are both fitted with Deere's JDLink data management technology, are available to order now for delivery in early 2023.

Fuel watch

Farmbot's new technology is helping farmers keep tabs on a particularly important commodity this harvest season.

Remote monitoring solutions provider Farmbot has launched a new sensor which allows users to keep an eye on their diesel tank levels.

The Diesel Level Sensor works anywhere in Australia with cellular or satellite connectivity and means diesel levels can easily be tracked, ensuring farmers can stay on top of usage.

Farmbot says this will help users remain aware of how much diesel is being used, and also provide peace of mind against theft or misuse while they are away.

Company managing director Andrew Coppin

says the global price increases for diesel has made the ability to track its use even more crucial.

"The price of diesel has increased substantially this year, and although we may see some relief from excise cuts in the recent budget, we expect prices to remain high," he says.

"The more expensive an input, the more important it becomes to manage it effectively.

"But you can't manage what you don't measure, and the Farmbot Diesel Level Sensor enables measurement of this key resource."

One customer already trialling the sensor is

Farmbot offers a range of remote monitoring solutions

Wilmot Cattle, with general manager Stuart Austin saying the sensor is helping them make better decisions.

"At Wilmot, we want every decision we make to be based on reality, not gut feel," he says.

'Like water monitoring, diesel monitoring allows us to know how much we have at any given time without physically traveling to the tank. As a result, we can make better purchasing decisions to ensure our farms run at their most efficient.

"Peace of mind that we know our precious diesel resources are not being stolen - or at least receiving real-time alerts if there is a drain event - is also a huge win for us."

Farmbot, which has more than 6,500 units across the country helping farmers manage their water assets, has also launched the latest version of its MyFarmbot platform.

Based on user feedback, the updates are optimised to work in low-bandwidth areas and are desktop, tablet and mobile compatible.

Information collected by the Diesel Level Sensor will integrate with MyFarmbot, which Coppin says will provide an all-compassing platform for Farmbot's customers.

"This means everything from water level, flow, consumption, trough levels, rainfall and now diesel will all be available from the one location," he says.

"By getting real-time updates on farm resources all with the touch of a button, farmers can devote even more time to more important tasks and spend less time worrying about their critical business assets.

"They can make even better decisions based on comprehensive, robust data sets."

ffm Feature

Ready to go

The team at BYPY Transmissions has been planning ahead for this year's harvest season.

As harvest season approaches, BYPY Transmissions, Australian distributor of Bondioli & Pavesi PTO shafts and gearboxes, is in a position to say the three words every farmer wants to hear in 2022: "We have stock".

The Victoria-based supplier, which distributes its products nationally, is ready to offer stock to farmers despite the global supply challenges which have tested the industry since the COVID-19 pandemic started.

"We have managed to get a good volume of stock in, and we are quite well stocked for the upcoming season," BYPY spokesman Ashley Male says.

"There are shortages in some areas but that's going to play out throughout the year for everybody, I think.

"We've got a good supply of most of the PTO shafts required for the harvest season and even the demand on gearboxes has been exceptionally high from many areas of the manufacturing sector.

"We've still got good supply of most of our regular stock gearboxes."

BYPY's specialties are power take-off (PTO) drive shafts and gearboxes and it is the sole licensed importer and distributor of Italian power transmission manufacturer Bondioli & Pavesi and BIMA gearboxes.

Imported directly by BYPY from Italy, Bondioli & Pavesi systems are found on the implements of most major agricultural manufacturers including Case IH, New Holland and Kuhn, meaning BYPY can service an array of customers.

BYPY is also still reaping the benefits of a decision to double its stock holdings early in the COVID-19 pandemic, meaning it had a good supply of all required items and spare parts at its Dandenong warehouse before the global supply chain issues hit.

This has meant BYPY is able to get stock out to customers across Australia very quickly, saving farmers costly downtime.

"Generally, we've got a same day to next day turnaround if it's in stock," Male says.

"Obviously we do a little bit of a prioritising system. If it's a machine down, we aim to get it out that day provided we've got enough time up our sleeve from notification of them needing it to freight being picked up."

Demand has remained high, which Male expects to continue with positive forecasting for agricultural activity over the next couple of years.

He says Western Australia has been a major growth area for the company in recent times, with that state's demand continually growing.

A

These PTO shafts and spare parts are currently available from BYPY

В

This slasher gearbox is one of many the company has in stock

C

The demand on gearboxes has been high from many areas of the manufacturing sector

D

The company has a strong supply of gearboxes and spare parts in stock

BYPY has worked itself into a strong position, but the company is far from resting on its laurels.

Male says BYPY is preparing well in advance to ensure it does not throw away the competitive advantage gained by securing stock early.

"We're planning already for some of our OEM's out to the 2024 season," he says.

"We haven't even done 2023 yet and we're just starting to look at 2024. Long range forecasting has become a big thing.

"We've increased our staff levels and when we're busy we go hard, just like farmers do. When they're harvesting, they go 18 to 20 hours a day, so we try and keep up with their demands."

BYPY Transmissions is located at 16 Dingley Avenue, Dandenong, Victoria and can be contacted on 03 9794 5889 or through www.bypy.com.au

The new 20-tonne JCB 457S wheel loader available only through factory order - gives farmers a new machine ideal for the bigger jobs.

Boosting payloads of about 5.5 tonnes, this new loader is set to be popular among operators with big loads to shift, such as biogas plants and largescale silage and muck spreading contractors.

The new machine joins JCB's top end 419S and 435S wheel loaders, purpose-built for agricultural applications.

While it shares some elements of the established JCB 457 used for stockpiling and loading out of large bulk commodity stores, the 'S' version has a new rear chassis and counterweight, and new transmission, axles, wheels and tyres to give it outstanding capabilities for demanding outdoor roles.

New transmission

At the heart of the loader is a new powershift transmission with six forward and three reverse ratios, with torque converter lock-up giving direct mechanical drive available in all six forward gears as the standard configuration.

Alternatively, the operator can use a new menu on the in-cab settings and operator information display to select torque converter lock-up in any reverse gear and any of the lowest three forward gears to suit different applications and driver preferences.

The combination of direct mechanical drive, close-ratio gearbox and class-leading 14.5 horsepower per tonne power-to-weight ratio results in impressive pushing and climbing performance, making full use of the 282hp (210kW) and 1,200Nm peak torque of the 6.7-litre six-cylinder Cummins B6.7 engine.

For less demanding materials handling applications, the operator can revert to the default 'standard' power output of 224hp (167kW) to save fuel, with auto engine shutdown after a period at idle, also contributing to overall fuel economy.

When on the move, a top speed of 48km/h enables the loader to keep pace with manure spreading and silage harvesting teams, and a 20-tonne capacity Rockinger tow hitch with drawbar location camera can be added, together with either twin-line hydraulic or air-ready trailer braking.

Buyers can order the wheel loader to come with a new

4.8m folding grass fork - itself available with a roading protection kit including road lights to facilitate safe travel

To help keep the engine and oil cooling systems at peak efficiency, a large cooling fan is installed with programmable automatic reversing to disperse dust and debris, and the fan assembly swings out to give quick and clear access for cleaning the radiator matrix.

Fuel storage

A new rear chassis design provides increased fuel storage capacity of 400 litres within the structure to keep the loader running during a busy schedule of heavy loading, and there is a re-profiled counterweight giving the clearance needed for filling a silage clamp.

The new JCB 457S runs on heavier duty 20-stud axles that can be equipped with either limited slip or auto locking differentials to get optimum traction when the ground is slippery underfoot, while a wider track width permits larger tyres to be fitted.

For field and yard applications, the 710/75 R32 Trelleborg TM2000 and 800/65 R32 Michelin MegaXbib 2 radial traction tyres provide first-rate grip and durability while keeping the new wheeled loader within an overall width of 3m, while for predominantly hard-surface operations, Michelin XHA 23.5 R25 L3 radials can be fitted all round.

Front end performance is determined by which of two loader arm options is chosen: the standard High Torque arms give muscular tear-out performance and a lift height of 4.3m, while the High Lift alternative increases the clearance over hoppers and AD plant feedstock bunkers to 4.8m at the attachment pivot

Contractors and large farms clamping grass or maize for silage or as an AD feedstock can make full use of the 457S loader's performance by adding the new 4.88m wide, 7.10 cubic metre capacity folding grass fork developed specifically for the new machine.

Distributors JCB CEA are taking orders and e nquiries now from interested parties. Visit www.jcbcea.com.au for more information.

Key features of the new JCB 457S wheeled loader

- 282hp (210kW) Dynamic power for a class-leading 14hp per tonne power-to-weight ratio
- 224hp (167kW) Economy power and auto engine shut-down to help save fuel
- New six-speed manual/auto powershift with selectable torque converter lock-up
- Heavy-duty wide track ZF 20-stud axles with limited slip or auto locking differentials
- High load capacity 710mm or 800mm radial traction tyres or hard surface tyre
- Standard or high-lift loader arms with roll-back available to minimise bucket spillage
- New JCB folding grass fork attachment 4.88m (16ft) wide, 7.10cu m capacity
- New rear chassis with larger 400-litre fuel capacity and increased departure angle
- Wide core cooling package with swing-out auto reverse hydraulically-driven fan
- Quiet and comfortable Command Plus cab with fabric heated air suspension seat
- Contractor Pro pack adds LED 360-degree lighting, carpet, half-leather heated and ventilated seat, twin beacons, stainless steel exhaust stack

Red letter day

With a redesigned cabin, new transmission technology and additional linkage options, Massey Ferguson's 8S series is set for a stellar Aussie debut. Anthony Wingard reports

When it comes to the new Massey Ferguson 8S tractor, Agco really went back to the drawing board.

The machine stands out in a paddock, not least for its classic Massey Ferguson red paint job, but for its unique design - something which the team at Agco describes as 'a revolutionary design change'.

And if that doesn't encapsulate the how the 8S is a new venture for Massey Ferguson's design team, the following was the quote which was carried on the official press release upon its unveiling.

"Last November we were celebrating the 50th anniversary of the moon landing, which made the impossible become possible," the statement from MF vice president and managing director, Europe & Middle East, Thierry Lhotte read.

"Now it is time to deliver that vision landing on earth.

The A-pillars are tilted forward, making the cab bigger

A 24cm gap separates the cab from the engine base on the 8S

"We are not launching just a tractor, but also marking a new era for our brand."

While Lhotte's proclamation was made in 2020 following its official public debut at Agritechnica 2019, Australians have been forced to wait for its official arrival Down Under.

The first unit touched down recently and made its official debut at FarmFest in Toowoomba in June. More units of the 8S are expected to arrive by early 2023, Agco says, however orders for the new 8S are

So, what is so revolutionary about the new 8S? Well, one look at the tractor should say all one would need to know.

Paramount to its design is the all new Protect-U cab, which is now entirely separated from the engine base. By installing the 24cm gap between the cab and the engine base, operators are better insulated against noise, heat, and vibrations from the engine.

The result here is one of the quietest cabs in the market with noise levels of just 68dB at rated engine

The gap also allows more air to draw into the engine and from a cleaner environment behind and beside the engine, according to Massey Ferguson product market manager Raph Hymus.

"It extends the maintenance window on the air filtration so that is the main advantage," Hymus says.

The gap also makes it easier to perform maintenance and reduce downtime.

The cab itself has also gotten bigger. In contrast to the MF 8700S - the older brother of the 8S; where the A-pillars lean toward the operator - the A-pillars

on the 8S are tilted forward, resulting in an interior volume of 3.4 cubic metres.

Operators are also provided more visibility with 6.6 square metres of glass windows inside the cab, and now don't have the distraction of the dashboard sitting behind the steering wheel. Instead, Agco has found a new home for the digital MF vDisplay.

"They've also gone away from the centre-mounted dashboard, so you're not looking through the steering wheel to view the tractor functions. Instead, that is all displayed on the A-pillars," Hymus says.

Inside the cab, other enhancements have also been made. The MultiPad joystick control lever is new; so too is the Control Centre armrest.

Mechanical active cab suspension, which is programmable and responds to the movements of the tractor, further enhances the comfort of the 8S on executive models.

"This completely new design delivers the next level of straightforward and dependable tractors that operators asked for," Lhotte said upon its release.

"They told us they need a tractor that is comfortable, with unrivalled visibility, efficient, easy to use and smart. Massey Ferguson has responded straight to the point with the MF 8S and the associated services."

Massey Ferguson offers four different models in the 8S product line-up, ranging from 205 horsepower (152.8kW) in the smaller 8S.205 through to 265 horsepower (197.6kW) in the 8S.265.

All models are powered a six cylinder, 7.4L Agco engine compliant with Stage V emissions standards and operate at a low rpm to reduce operating costs.

This completely new design delivers the next level of straightforward and dependable tractors that operators asked for

Ready to Work

From a functional perspective, Massey Ferguson has delivered seven per cent more capacity for its three-point linkage capacity on the rear, which has increased up to 10 tonnes. A new 4.8t capacity front linkage option, which is fully integrated into the tractor, is also available and comes with the option of an ISOBUS socket.

With the 8S Series, Massey have also introduced its latest offering of efficient transmission technology in the form of the Dyna E-Power, Dual Clutch gearbox. The technology was designed in-house and combines the advantages of a continuously variable transmission (CVT) with the ability to transmit power as efficiently as a mechanical transmission.

The MF 8S made its Australian debut at FarmFest

The new transmission unit further reduces power losses as well, with up to 26 per cent higher speeds and fuel savings of up to 10 per cent compared to the previous Dyna-6 system found on the MF 7700 S.

New hydraulics in the linkage systems mean the 8S can handle and operate large, wider implements. As standard, the hydraulic flow can achieve 150L per minute - a figure 36 per cent higher than the previous system.

The option to increase to a 205L/min system, which can be supplied as an Eco version, is also available - up from 190L/m on the previous model.

Operators of the new 8S will also benefit from MF Connect Telemetry, which comes standard across the 8S Series with a three-year subscription licence.

While the 8S Series is still in its formative years in Australia, the response from the agricultural machinery scene globally has been positive.

The tractors have been recognised with a Red Dot Design Award, was among the American Society of Agricultural and Biological Engineers (ASABE) AE50 winners, and the winner of the Farm Machine 2022 award in the 180-400hp category.

Perhaps most poignant of all is that the MF 8S.265 was named Tractor of the Year 2021, on the sidelines of the Agritechnica event.

ffm Feature

Used to transport, lift and position light to heavy loads thanks to the presence of a hydraulically operated telescopic boom, Dieci telehandler users can perform a variety of jobs using the same vehicle.

Compared to normal tractors with front lifting, telehandlers are more manoeuvrable, have a greater hydraulic capacity and can reach further, as well as offering lift heights ranging from 5.8m to 9.6m.

Dieci works daily to evolve its machines, adopting the best solutions based on research, advice and experiences with its customers.

The manufacturer offers a range of telehandlers designed to suit Australia's diverse agricultural sectors, including industry specific models for poultry, cotton, piggeries and hay.

Versatility is one of the greatest strengths of a Dieci telehandler with a variety of attachments available to suit numerous tasks.

Whether moving loads of feed through tight spaces, unloading pallets, or even stacking bales of hay, Dieci telehandlers have been designed to get the job done.

From the compact 2.5 tonne Mini Agri to the large seven tonne Agri Max, Dieci agricultural telehandlers excel in the management of work cycles and labour on any farm.

Characterised by excellent handling and fluidity of movement, the Mini Agri is built tough and excels in meeting the needs of smaller enterprises, such as greenhouses, nurseries, horticulture and poultry farming.

A step up from the Mini Agri, the three tonne Agri Farmer is undoubtably one of the most versatile models in the Dieci range. Ideal for use on small to medium sized properties, the Agri Farmer gives a choice of lift heights and capacities to suit different loading and handling priorities with two different models available.

In the middle of Dieci's range sits the versatile four tonne Agri Plus. The popular 40.7 model is powered by a 125 horsepower, Tier 3 FPT engine and has a maximum travel speed of 40km/h. This model is well regarded due to its simplicity, reliability and all-round performance.

Designed for more intensive work volumes, the top end Agri Max guarantees optimal performance and reduced cycle times in environments such as nurseries, mills, grain or feed production and recycling.

Dieci takes pride in building machines with the best components and a heavy-duty chassis that will last the distance.

Reinforced booms are made of high resistance steel, while load sensing and flow sharing distributors allow for more simultaneous movements during operation.

Similarly to most agricultural tractors, telehandlers feature four-wheel drive functionality for smooth navigation of rough terrain. What sets them apart from traditional tractors is their large, agricultural-grade tyres with excellent traction.

With these features, Dieci telehandlers are well-adapted to working in tightly confined spaces with an uneven surface, typically found when feeding livestock or loading and unloading products.

Dieci telehandler cabs are designed to set the standard for operator comfort across Australia's demanding work environments. They are cooled by an advanced air conditioning system, making work in harsh climates far less taxing.

A roomy interior, luxurious air seats, 360-degree views and excellent thermal and sound insulation further add to the comfort and functionality of these vehicles.

The Dieci Agri Farmer

Dieci heavily invests in safety, therefore each telehandler has been manufactured to meet local Australian design and compliance standards. The company uses an independent external engineer who signs off on every new machine or attachment that comes out, including attachments that have been developed in-house.

Dieci telehandlers are designed to save farmers time and money, while improving productivity for maximum agricultural output.

Their ability to perform various tasks has proven to be extremely resourceful in the modern-day farming industry.

Dieci agricultural telehandlers are available now across Australia through the Dieci Australia dealer network by contacting 1300 888 479 or visiting www.dieciaustralia.com.au

Precision agriculture in part was a product of the Cold War

Following the Soviet launch of Sputnik in 1957, the need to map and track a rocket became an imperative, in order to destroy it.

As the Russian and American intercontinental missiles got more sophisticated, both sides built harder and deeper bunkers to protect their rockets - which in turn required ever more accurate targeting. In the end the targets needed to be almost metre-accurate as the madness of Mutually Assured Destruction reached its height in the 1970s and 80s.

This race for precision directly led to the creation of the Global Positioning System (GPS) which commenced in 1973, with the first prototype spacecraft launched in 1978 and the full constellation of 24 satellites becoming operational in 1993.

Civilian access to the GPS technology was allowed from 1984 following an executive order by President Reagan after Korean Air Lines Flight 007 was shot down by the Russians after flying off course.

The very first satellites only offered irregular fixes and were accurate to within a kilometre, but from Day One the pressure was on for the private sector to have access to this revolutionary technology that saw an end to the centuries long use of navigation by the stars and location fixing from set ground stations.

It was not until the collapse of the USSR and its Soviet sphere of influence in 1991, that the United States Department of Defence released the algorithms of their highly protected GPS system to allow mapping to within metres, and then centimetres.

Up until then the United States government had placed pass codes on the system to selectively

Trevor Whittington, CEO WAFarmers

deny access to enemy countries in times of war, which encouraged several countries to embark on setting up their own global or regional satellite navigation systems.

The Russian Global Navigation Satellite System was developed contemporaneously with the American GPS system but suffered from incomplete coverage of the globe until the mid-2000s.

China's Beidou System began global services in 2018, and finished its full deployment in 2020, the European Union's Galileo System, India's NacIC, and Japan's Quasi-Zenithhave are now also all on stream

The combination of cheap access to GPS posi-

tioning, smart phones, smart cameras and mobile coverage has driven an explosion of precision agriculture. Initially this was led by the big agri-machinery corporates such as John Deere and the likes of Trimble, Topcon and others.

But as the market has expanded new competitors have entered, lured by the huge potential of the precision farming sector, which is expected to hit US\$23 billion by 2030.

The potential of tapping into the millions of mechanised farmers in developing and newly industrialised nations and supporting their next big leap forward in grain production is seen as the precision revolution, following on from the green revolution of new varieties in the 1960s, the chemical revolution of the 1970s and 80s and the move to mechanisation in the 1990s.

Technologically savvy large grain producing countries including Brazil, Argentina, Ukraine and Russia are as proficient at using this technology as we are, and the expansion into big grain growers China and India over the next decade could well force global grain prices back down to their long-term averages as these countries do the big yield jump that we have experienced over the last two decades.

In turn, companies like Tata from India, Beidou of China and Pro Solus of Brazil are already working to make highly affordable ag tech spray mapping systems, replacing products that cost \$50,000 twenty years ago and \$20,000 today with new systems that could ultimately cost about \$2,000 at most.

So, before you rush out and buy the latest name brand US or European designed GPS Guidance, steering and spray control system, go have a look at what's on offer on the web, you will be surprised how cheap it is.

Tony McVilly reckons Claas Harvest Centre Swayn & McCabe "has never been better" as he prepares for retirement after almost half a century with the business.

The Colac-based managing director has spent 48 years - his entire career - with the company and admits there is also a hint of trepidation about life without the only professional routine he has known.

Joining as a 16-year-old, McVilly has seen plenty of change within the business and the wider industry, none more influential than the ever-growing impact of technology on both machinery being sold and the methods of selling it.

"The first technology was mobile phones when they came in," he says.

"It makes things easier to properly do business because there is not as much face-to-face contact needed, not as much driving, you can do calls while driving and you don't have to sit on the phone all night or early in the morning.

"Tractors also got bigger. When I first started, a 100-horsepower tractor was just about unheard of.

A 50 or 60 horsepower tractor was a pretty good size tractor, then 100 horsepower became the norm and now it's 140 or 150 horsepower.

"It's amazing the way technology has changed and just the advances in the way you can set machinery such as sprayers and spreaders.

"All those things have changed. The round baler was out in the first year I started and that was a huge advancement in doing hay. They weren't much good at the start but it was still a huge advancement."

McVilly is also a Tractor and Machinery Association board member, a role he plans on continuing.

He will not be completely lost to Claas Harvest Centre Swayn & McCabe either, retaining his ownership stake and also keeping abreast of happenings - although his mindset while on holidays will be a big difference.

"The business has always been on my mind when Igo away," he says.

"I always put that first and this will be the first time I go away and don't put that first.

"Instead of going away for a week or 10 days, I can

<

Tony McVilly of Claas Harvest Centre Swayn & McCabe is preparing for retirement

go away for a month or six weeks and the business will still be running.

"Even though it would be when I wasn't here, I still felt obligated to make sure everything was running right."

The day-to-day running of Claas Harvest Centre Swayn & McCabe will be handed over to Damian Gatens, who himself has spent 35 years with the business

"We've got a lot of people that have been here for 15, 20, 25 and 30 years, so we've got a really good group of people that are able to carry on Tony's legacy and use the knowledge that he's given to us, which will be good in the future." Gatens says.

"Every situation that you find yourself in, he's been in it. A problem with a tractor, a delivery problem, a mechanical problem - he's either seen it or heard of.

"His extensive knowledge of machinery, not only his own, but other brands has been something that's made him into the trusted salesman than he is today.

"He not only knows his own product, but there's also a lot of knowledge of what other brands are out in the market, what he's selling against and what the benefits of his machine are.

"That builds a fair bit of trust with the customer. He never bags out another machine, he just explains what ours has got compared to what the other one has.

"He gets a lot of rapport from his honesty and a lot of return business because he doesn't muck around."

Looking ahead to the future, McVilly says electric and autonomous vehicles will continue to be an industry trend and believes they will arrive quicker than previous changes in the industry, prompted by the global economy and a desire to reduce emissions.

Beyond just machinery changes, McVilly believes the internet has made farmers more aware of the products available, which has changed the structure of customer interaction.

"I'm dealing with third generation people of what I first started dealing with," he says.

"It used to be that they would come in and spend a bit of time with you showing them everything, and they would say 'that's what we want'. Now they've read about it and they know what they want."

For all the experiences over nearly half a century, McVilly says there is one thing which has not changed and it is this philosophy which he believes will hold Claas Harvest Centre Swayn & McCabe in good stead for the future.

"The biggest thing that hasn't changed is the want for backup service and I think that is where our business has always been so strong," he says.

"That's been our business' number one priority - that we get people going. I was taught that from when I first started and that's always been my motto is that it's the most important thing to do.

"I think it's been important for our business to be able to do that, and I think we can pride ourselves on our after-hours service.

"In the last two or three years, the business has gone from strength to strength. The business has never been better." $_{\text{mm}}$

Dutch courage

Chris McCullough takes us behind the wheel of a Dutch truck taking food into, and out of, Ukraine.

Getting humanitarian aid into Ukraine is, at present, relatively straightforward, but helping the nation with its agricultural exports is another matter entirely.

That's according to Gerjan Wielink, a Dutch truck driver who has been assisting with the humanitar-

Wielink runs his own agriculture trading and transport company at Dronten in The Netherlands, and decided to volunteer his services and his trucks to transport humanitarian aid, mainly food, to various towns and cities desperate for help, soon after the Russian invasion.

Wielink and two of his drivers, have just completed their fourth trip to Ukraine clocking up over 4,500km each, delivering food into the war-torn cities of Kharkiv, Odesa and Mykolaiv.

This time, however, the convoy ventured southwest on the return journey to pick up loads of grain in Cherkasy, 200 km south of Kyiv, which had been sold in The Netherlands.

While Wielink has planned more similar trips he says there are many challenges including slow border checks, language barriers and limited supplies of diesel.

"We have been over in Ukraine four times now delivering food and built up a good relationship with the border guards, but crossing can take a long time," he says.

"Normally we cross the border entering from Lviv in Ukraine where local truck drivers are waiting for up to five days to cross, but we usually can pass the kilometres of queues as we are on humanitarian runs."

Using special trailers with walking floors, Wielink and his team were able to transport pallets and boxes of food to the besieged cities, and then load up with loose barley on the return leg. The walking floors make it easy to unload the grain at its final destination.

The three trucks then collected 22 tonnes each of barley at a Ukrainian property owned by dutchman Kees Huizinga and successfully delivered it to the customer in The Netherlands, but had to wait 27 hours at the border crossing.

"The walking floor trailers were perfect to transport the humanitarian aid out and collect the grain on the way back," said Wielink.

"With all the Ukrainian ports blocked by the Russians, the farmers in Ukraine have no way to export their much-needed grain to countries around the world. People are going to starve in some developing nations if they don't get Ukrainian grain.

"I know the 66 tonnes we hauled out is just a small amount going into the EU but it's a start, and gives the farmer some more storage space for this year's harvest which is starting soon."

Gerjan Wielink, right, and driver Alfred Aarten have been bringing humanitarian aid into Ukraine during the conflict.

Negotiating the border and busy Ukrainian roads was a challenge on this trip for Wielink but he also faced fuel shortages.

"Once we crossed the Dnipro River in Ukraine" the roads in the west of the country became very busy with traffic as life starts to return to normal there," he says.

"Fuel is also in very short supply there. We were lucky the farmer was able to spare a few litres to allow us to get to the border, but my fuel light came on just as I was crossing. Luckily, I made it to a gas station 60km from the border in Poland.

"But it's the crossing that presents the biggest challenges.

"Even though we passed many Ukrainian trucks in the queue we still had to wait 27 hours at the border.

Wielink said he found there as a significant language barrier with the Polish authorities.

"There are only two guards on duty there and one of them even had to phone his daughter to translate into English for us to understand," he says.

"There really should be grain corridors in operation at several border crossings so we can run quicker across the border to get grain out of Ukraine.

"The checks are very strict indeed. If the trailer weighed 10kg more than it should, then that can cause a major headache." m

Farmers are predicting a stable outlook for the second half of the year

SURVEY

Blue skies

Farmer confidence is steady, according to a recent survey completed through Rabobank

Rising input costs and fallout from the conflict in Ukraine have dented Australian farmer confidence, but recent high returns have left the industry in a strong position, according to Rabobank.

The agribank has released the second of its quarterly Rural Confidence Surveys for 2022, which revealed some concerns about external factors, but also optimism about high agricultural commodity prices and the prospect of another bumper grains harvest.

Most farmers surveyed expect business conditions to remain stable over the next year, with 53 per cent of farmers answering in that

Of the remainder, almost twice as many expect an improvement over those anticipating a decline (28 per cent compared to 16 per cent).

The sectors with the most positive outlooks are cotton, grain and dairy, Rabobank says, due to high prices and excellent seasonal conditions.

Recent strong conditions have led to more farmers investing in machinery and technology for the future, and Rabobank Australia CEO Peter Knoblanche says this will help to offset challenges due to increasing costs.

"The benefits of those investments are certainly helping farmers create some efficiencies, but the cost pressure is not easing and producers definitely need those higher commodity prices in order to meet rising input costs," he says.

The war between Russia and Ukraine is also impacting confidence, with 50 per cent of Australian farmers believing it will have a negative impact on farm businesses, although 25 per cent are anticipating it will impact Australian farms positively.

Rising fuel, freight and fertiliser prices were cited as the main causes for concern, while those with an optimistic outlook highlighted high commodity prices and impacts on supply and

The grains sector was most optimistic, Rabobank says.

"[The war] is undoubtedly exacerbating many of the cost and supply issues which were already in play last year," Knoblanche says.

"But for some sectors, especially grains, we are seeing the conflict impact global supply and push prices higher, and also deliver higher local prices with strong demand for Australian grain as the world turns to our producers to help meet critical food needs."

Rabobank's survey also measured the confidence on each Australian state.

It found farmers in New South Wales remain the most confident in Australia, while Western Australia had the biggest jump in optimism during this quarter. 📶

Escape to the country

Millennials are on the move, and they have regional centres in their sights

Young people are the biggest demographic moving to regional areas, a new report has found, with three South Australian towns experiencing the nation's biggest growth rates.

The report, prepared by Commonwealth Bank and the Regional Australia Institute, found overall movement to regional areas increased by 16.6 per cent during the March quarter, which is a five-year high and almost doubled pre-pandemic levels.

For the first time, this quarterly report analysed the demographics of regional movement in addition to pure numbers and found Millennials defined by the report as people aged between 24 and 40 - were the biggest movers.

The three areas which had the biggest increases in regional migration during the 12 months between March 2021 and March 2022 were all in South Australia - Ceduna (114 per cent growth), Mount Gambier (85 per cent) and Port Augusta (74 per cent).

Moorabool in Victoria and Western Downs in Queensland were next in that category.

Despite these significant increases, the five areas outside state capitals with the highest overall migration levels are Gold Coast, Sunshine Coast, Greater Geelong, Wollongong and Newcastle.

Commonwealth Bank's regional and agribusi-

The opportunity to access larger living spaces at a cheaper price is being taken up by an increasing number of people, according to new Commbank data.

ness banking executive general manager Paul Fowler says regional areas provide attractive local employment opportunities, which encouraged migration, highlighting Mount Gambier as a strong example of this.

"Regional Australia is thriving, fuelled by strong investment across a broad range of industries including agriculture, manufacturing, retail and hospitality," he says.

"There are labour shortages in many parts of regional Australia and local businesses are attracting skilled and unskilled workers to increase capacity and serve growing demand for products and

"Mount Gambier is perfectly positioned between Adelaide and Melbourne with wonderful amenities and work opportunities in a diverse range of industries including manufacturing, agriculture, civil construction and wholesale retail."

Regional Australia Institute CEO Liz Ritchie says millennials often brought business skills to local communities and planting family roots benefitted schools and sporting clubs, while receiving the advantages of bigger living spaces at a cheaper cost.

Australia's two largest cities - Sydney and Melbourne - experienced the biggest losses of population numbers due to regional migration.

Steady going

ANZ predicts Australian cattle prices will stay high for some time as the sheep industry works its way through a series of pandemic disruptions

Cattle prices in Australia are tipped to stay around current record levels for at least the next two years, according to ANZ's latest agricultural commodity report.

Prices saw a period of unprecedented growth from the start of 2020 until early 2022, as the arrival of the drought-breaking rain across much of Australia encouraged growers to enter a period of sustained restocking activity.

Michael Whitehead, ANZ's Executive Director of Agribusiness says it looks like cattle prices will now be entering a relatively flat period.

"Over the course of this year, prices have stayed in a roughly narrow band, mostly within 1,100-1,150 c/kg," he says.

"In dollar terms, the relative stability of cattle prices of the current period has not been seen since 2006."

Using a new modelling method that considers variables including herd growth rates, female slaughter levels and exchange rates, it's likely this strength will continue, Whitehead says.

"Under the model - and noting that it has been quite accurate historically - Australian cattle prices are forecast to stay high for the next two to three years, potentially hovering around the 1,000 c/kg level," he says.

"Arguably, in the absence of a black swan event such as a drought, there would appear no major reason why cattle prices should fall markedly for at least the next year or two."

That said, Whitehead added that labour shortages at abattoirs could slow cattle sales to both processors and feedlots.

A lack of available labour and lockdowns are also having an impact on the Australian sheep industry despite a solid first half for 2022, ANZ head of Agribusiness Mark Bennett says.

"While the sheep sector has been less impacted by the restocking zeal which has pushed cattle prices into the stratosphere, it has also felt a greater impact from some of the side effects of COVID-19 and associated lockdowns," he says.

Saleyard restocker lamb prices have trended downward for much of the year, driven by low numbers in the yards due to seasonal factors including wet weather and producers holding stock back in the hope of a price rise, ANZ says.

"While there are several issues overhanging from the pandemic still impacting saleyard prices and supply, the coming winter months should help regain a demand/supply balance.

"After that, all signs point towards a spring kick in the market with some in the industry even going so far as to speculate that the National Trade Lamb Indicator may breach the magic 1,000c mark," Bennett says.

"For wool growers, the outlook is somewhat buoyed by the view that Australian wool remains somewhat under-priced given the lack of global supply of fine wool following the concerns over Foot and Mouth Disease in South Africa limiting their supply."

"However as wool production picks up as a result of flock rebuilding and strong season, the strong domestic supply may keep some slight downward pressure on prices," he adds.

Double jeopardy

Australia is forecasting a strong harvest season in the face of falling global grain stocks

Falling global grain stocks and a spate of agricultural export bans could work out well for Australian producers, according to ANZ Bank.

Speaking after the release of ANZ's most recent Agri Commodity Report, ANZ associate director of Agribusiness Research Madeleine Swan says global grain stocks could fall further next year, keeping global grain prices high.

"While the conflict in Ukraine has had a major impact on grain prices, it is the overall global stocks to use ratio which is increasingly of concern," she says.

"This is being driven not only by the Russian war in Ukraine limiting wheat supplies, but also the prospect of lower production in 2022-23 and the flow-on effects, such as the Indian export ban, further limiting supplies," Ms Swan says.

Announced in May, India's ban on exports of its own grain is one of many factors anticipated to have short term impacts on global supplies, with the global wheat stocks-to-use ratio is forecast to decline from 36 per cent to 34 per cent in just one year.

ANZ says the most revealing figure is the stocks-touse ratio once China's vast stockpiles are removed - which will decline to just under 20 per cent.

This means that without China, the world has enough wheat to provide supply for just under two and half months.

Other grains and oilseed stocks are improving slightly with barley, rapeseed (including canola) oil and corn stocks-to-use all forecast to improve slightly in 2022-23.

Swan says indications continue to be that Australia's 2022-23 harvest season may be much higher than

originally forecast, despite concerns about the impact of high fertiliser, fuel and chemical prices.

"The dominant story being told is that producers are planting to take advantage of sky high prices and considerations of how to manage costs are secondary," she says.

"This points towards another big crop result should the season hold up, even if fertiliser and chemical application rates are reduced in pursuit of cost control."

Indeed, the report adds that the fact Australia has never imposed its own export bans makes it a preferred supplier of agricultural commodities in the global marketplace.

The reduced supply of goods caused by trade bans, as well as the heightened concerns about availability, serve to push up the prices of the agri products Australia currently exports, an impact which flows back the producer, ANZ says.

Longer term, when other countries restrict their exports, it can result in their own agri production volumes falling, as producers are less incentivised to grow large crops or produce large herds, leading to further upward price pressure globally.

Additionally, several importing countries will seek to grow their storage capacity of commodities including grains, frozen meat and milk powders, further increasing demand for Australian agricultural exports.

As has happened in the past, ultimately supply issues will ease, and the trade bans will fall away, but for the time being they are likely to continue to keep having a major impact.

GrainRite **Self Propelled Augers**

are designed and built strong and tough in Australia for Australia's demanding conditions. Finger tip hydraulic controls allow the operator to raise & lower each end, ground drive, and steer.

Heavy duty barrel and frames reduces operation vibration considerably - less vibration means less grain damage. Reverse gear box with positive lock allows quick and easy cleanout.

All our augers come standard with highway lighting, oversize sign, new 10 ply tyres, aluminium mud guards, fire extinguisher, drop spouts, cast iron pulleys, and many more features and options.

GrainRite Augers have a 10.75" width barrel that is 2.5mm thick. GrainRite Augers are available in 35', 50' & 60' lengths.

Plant & Equipment

The Wazer is in hot demand in fabrication workshops

Ride the **Jetstream**

Soon available through Hare & Forbes Machineryhouse, the Wazer desktop CNC waterjet cuts hard and soft materials with digital precision

Waterjet cutters have been around for a long time, however, their size and cost can put them out of the reach of individuals or small business.

The new Wazer desktop waterjet is designed to change that, using a high velocity jet and a combination of high-pressure water and abrasive particles to cut through hard and soft materials.

The Wazer small format waterjet can cut through sheets of almost any material, including metal, stone, ceramic, composites, plastic, rubber and foam.

Users have been attracted by how easy it is to connect to standard electricity, water and drainage points.

The unit's compact size fits in any workspace and brings professional-grade fabrication into any workshop. It is ideal for on-demand cutting of custom parts and its in-house capabilities reduce the need for outsourcing.

Wazer has been in high demand by small manufacturing businesses, research and development facilities, universities and technical departments where it is used for prototyping, manufacturing, fine art and instruction, it says.

The waterjet was developed by co-founders Nisan Lerea and Matthew Nowicki during their time as students at the University of Pennsylvania, where

both were involved in the students' Formula SAE Team, which built a new racecar every year to race at an intercollegiate competition.

"I would go on to spend hundreds of hours in Penn's machine shop, CNC-milling metal parts for the race car, for research labs, or for my own coursework," Lerea says.

Lerea says the engineers would normally try to save time by designing parts that could be laser cut - with the downside of this being that they could only use parts made in acrylic or MDF.

Tasked by a professor to build a small waterjet for the assigned year-long design project, by May 2012 the students had built their first small-scale waterjet, capable of cutting through aluminium 6.3mm thick and steel 3mm thick.

By 2015 Lerea and Nowicki were working on the project full time, and in January 2016 they moved temporarily to Shenzhen, China, to join the Hax Accelerator, where they developed the business and refined the design and engineering of Wazer.

Today, the Wazer team comprises mechanical, electrical and manufacturing engineers who collectively have led the designs of multiple products, both at start-up and large companies.

A sample cutting from the machine

Cut through

This metal-cutting band saw, sold by Hare & Forbes Machineryhouse, is built for clean, high precision cuts

metal cutting band saw

The Hafco Metalmaster EB-330FAS NC swivel head metal cutting band saw is a fully automatic hitch feed, single mitre band saw designed for repetitive cutting of small to medium-sized sections in single or pack forms.

It features an automatic hitch feed, 178 mm (7-inch) touchscreen controller that stores 20 programs and boasts an inverter infinitely variable blade speed control of 25-82 metres per minute.

The band saw cuts from 0 degrees to 45 degrees right in its automatic cycle and from O degrees to 60 degrees right in the semi-automatic cycle. It also has hydraulic vice clamping with a manual hand wheel adjustment.

Featuring a 500mm stroke hitch feed vice with ball screws and a servo driven motor, the band saw is able to cut variable lengths. Ball bearing blade guides ensure minimal blade clearance wear, which increases blade life due to less friction.

A mechanical position sensor allows the saw frame to lower quickly toward the material and automatically detect the start-cut point. Blade wear is minimised by the bi-metal blade function that retracts the vice after cutting, preventing the blade from rubbing on return.

Other features include a quick action lock/release lever for the swivel head, a heavy-duty gear drive system and a blade cleaning brush

Operation of the Metalmaster EB-330FAS band saw produces low noise and is vibration free - ensuring it can make those high precision cuts without interference.

THIS FINANCIAL YEAR

INCREASED

The turnover threshold has been increased to businesses with an aggregated annual turnover of up to \$5bn.

✓ EXTENDED

The introduction of Temporary Full Expensing (TFE) now allows businesses to claim an up-front tax deduction (100%) for assets that are in use or ready for use by 30 June 2023.

REMOVED

Under TFE, there is no restriction on the cost of the eligble asset that can be claimed (the previous Instant Tax Write-Off Scheme had an individual asset cost limit of \$150,000).
